So...wait just a minute. Are you saying that anyone who does not serve his country in any capacity (you'd have to define in any capacity, by the way) is not supposed to live in the United States? Because, in the United States we--regardless of *military* service to the country or not--DO avail ourselves of whatever is available, be that a good education, a good job, a good doctor, a good teacher, a good whatever.

That the freedoms we enjoy are here, because of the military service of others, is greatly appreciated by most--there are those that are just plain idiots (and Jim is not one of them). And, to read your comment above without having paid attention to this thread, seems to say that anyone who doesn't meet your standards of service should just roll up and die? Surely I am mistaken in my interpretation of your comment, above.

Kim W5TIT

>no instruction, training, or supervision?

There were no "streets" on Tsukishima Island in Tokyo in the 1950s.
Those were eventually put in when both the USA and USAF vacated
the island by the 1960s.

We didn't "walk in" either since the billet was a half hour shuttle bus
trip from the transmitter station prior to assignment. Seven months of
Signal School were completed in Fort Monmouth...but that was only
on very basics of HF receivers-transmitters since the majority of that
MOS's school was on microwave radio relay and most of those were
using pulse code modulation (principally pulse-position modulation).

The intended microwave radio relay system hadn't arrived yet and
would not be there until the next year...and the only schooling we
got was a super-condensed two-week formal course taught by the
two General Electric field engineers stuck in their civilian assignment.

[Army Signal Office didn't give the commercial GE equipment a military designation until 1955] The Korean War had interrupted a few more permanent installation intentions and this was one of them.

When IN the military, one does what one is told to do. Period. You either know your basics or you don't. If you don't you get re-assigned and the re-assignment is not negotiable. So, us microwave types got less than a one day of informal instruction, some real hands-on training by the NCOIC (Non-Commissioned Officer In Charge) and left the rest up to the "trick chief" (team supervisor, usually E-5, and there were four teams on a rotating schedule). Gene Rosenbaum, N2JTV, was assigned there about a month before I was and assigned to another team, same duties.

There really isn't a lot of smarts necessary to tune up a 1940s era transmitter, whether 1 KW or 15 KW. All the finals were tube type and it was "dip the plate, peak the grid" kind of thing after peaking the driver stages. Always, always, always remember to neutralize that final...all of which seemed to be push-pull power triode things. We had an 833 bottle on a stand at the central control console where failure to neutralize on a QSY caused plate overheating which in turn softened the glass envelope until air pushed in and caused all the overload relay and breakers in that transmitter to trip. Radio circuit went dead and such outage is a definite NO-NO when the assignment is to maintain communications 24/7.

Transmitters, per se, were not the complicated things to operate besides being 7 feet tall with lethal voltages inside. The FSK exciters for the RTTY radio circuits needed to be fine-tuned even though they had quartz crystal control. That proceedure needed the distant receiver site to tune up on the carrier and send a zero beat over the telephone circuit, then apply Fox Test keying and adjust the "spread" or Space frequency for as close to 850 cycles as possible (carrier zero beat was on Mark frequency) using an ears-only audio beat with a standard 850 cycle loudspeaker tone. Receivers frequency standards would then measure everything again and put it on the order-wire (dedicated TTY loop) shared with us and Control. If Control liked the numbers, they would remove the Fox Test and put "traffic" on it...if not, they would ask all to do it again. We rarely repeated anything. Each team would do anywhere from 6 to 12 QSYs per shift (approximate) on the RTTY circuits. We also had preset-tuned SSB transmitters which QSYed in a minute, replacing the most cranky of SSB stuff designed before WW2. A full QSY, from order-wire notification to frequency standards okay, took 3 to 4 minutes with RTTY.

At the Tuskushima Island site, primary AC power depended on commercial Japanese 50-cycle input. That tended to be erratic and at least one power outage happened each week. When that happened, the single power man in the diesel generator wing had to get at least 350 KWe supplied and the team on duty had to

check out every single "up" transmitter all over again. Frequency standards went into a tizzy because they had to check out every single frequency to make sure it was where it was supposed to be. That meant an average of 30 different radio circuits with 30 different carriers and different modulations. Control had to hop and tell the torn tape relay crew to reset all the p-tapes on the transmitting distributors...which involved at least a 100 different TTY p-tape machines. A mere 5-minute outage would result in losing over two hours total traffic capability. NOT good...but we didn't get chewed for something not our fault. The newer Kashiwa site had its own 600 KWe generators and we were spared those damn power outages.

NONE of what I described was taught in Signal School, not even for Field Radio MOSs (which required morsemanship ability even if it wasn't used in the field in Korea). It could all be "taught" by laying hands on the working equipment and doing it like the sergeants described how to do it.

If anyone knew more than basics of electronics/radio, they got up-graded, perhaps transferred to the VHF and UHF radio relay which used frequency-multiplexed audio handling 4 voice channels per radio circuit. None of that was taught to microwave MOSs so we learned how on-the-job, verbally and by the TMs (Technical Manuals) which were excellent then on giving theory of How Things Work from a practical operations perspaective. Those of us who kept our minds open, willing to learn, had a wonderful opportunity to see how the Big Time in communications of the 1950s operated and stayed operating. When the TTY traffic is 220,000 messages a month, it IS the big time...and the station I was assigned to was only the 3rd largest in the Army Command and Administrative Network (ACAN).

No, we didn't just "walk in from the street" and start in. We were told what to do by those who actually did it, and most of those would explain more detail and theory if one really showed an interest. After three years on that assignment I had a wonderful crash course in real HF radio plus the beginning of microwaves and wound up an E-5 doing some of the explaining of procedure and theory behind it all. Wouldn't have missed it for the world, even with the threat of WW3 hanging around for everyone to get nervous about.

>> But, in 2004, U.S. radio amateurs MUST still pass a morse test
>> to "qualify" for operating an amateur radio transmitter on HF. No
>> other radio service (other than certain Maritime radio services)
>> require morsemanship testing.
>
> Yes, that is pretty much the case.

WHY is that? There's no real reason for keeping that old test in there.

All that morse test satisfies is the egos of the olde-tyme hammes
who will never have to take another morse test in their lives (if they
renew on-time). THEY had to do it so everyone else MUST do so.
Ptui.

> My whole point is that if you want to be a Ham with HF access at this
>time, that is a hoop you have to jump through.

Fine. Be a lemming or sheep.

I'm just advocating a change in the radio regulations. Without any
personal needs, desires, or ego. I don't need any Titles or Status
or a bunch of alphanumerics to "sign behind or in front of my name.

Been there, done that a long time ago, and a little while ago (early
this year), all without any legal requirement to pass some morse test.

>> If that morse test is so absolutely "needed," then the definition of the
>> ARS should be changed in Part 97 to "Archaic Radiotelegraphy
>> Service" for the USA.
>
> No need to fixate on the Morse code test.

Then why DO you?

Why do you wish to CONTROL newcomers by keeping that morse
test? Folks will think you have a Hoop Holder complex, somebody
trying to be a guru or knowitall about "radio."

If someone LIKES morse code operations, fine say I let them do
their thing. But, to keep on enforcing an antiquated regulation
necessity about taking a morse test is, to me, downright stupid.

There's lots more to amateur radio than trying to recreate the 1920s
and 1930s "pioneering days" by keeping old, out-of-date tests.

Happy New Year on this last day of the 4th year into the new
millennium...

LenAnderson@ieee.org

4. Re: Character counts

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-01 02:15:55 UTC

""" What is the logic behind your answer?"""

Must my answer confrom to liberal logic?

> As you seem to believe, character does count.

> So, Michael, please name one liberal (or "democrat") organization
that
> promotes character in boys and yound men?

I know lots of Democrats that support the Boy Scouts, and lots of
independents.

Wunnerful. I know lots of people, too! That is NOT THE ISSUE!

Why was the BSA booed at the """DNC Convention""" while they brought
out the American Flad and recited the Pledge of Allegiance?

Why???

"""You take what SOME people who align themselves with the
Democrats do and apply that to the whole."""

ABSO-FRIGGIN-LUTELY!!! Every Democrat has to accept responsibility for
that act.
Were they Mujahadeen???

And >>>I<<< take what happened at the DEMOCRATIC NATIONAL
____CONVENTION 0___ to represent the Democratic >>>PARTY!!!<<<

If you don't like it, find a new party.

"""That is a losing game, as there are segments of Republicans that are

similarly fringy."""

Oh, my. People that believe in God. Wonder if Jews beieve in God?
Wonder if Palistinians believe in God? Wonder if Methodists believe in
God? Wonder if Rev Jim believes in God?

It's just so awful that there are still luddites that believe in God.

NYT says "God is Dead!"

But we must have a Palestinian State because Allah wants it.

> I wish you the very best of luck on that one, and I do hope that you
> succeed.

"""So it is okay to be corrupt as long as you are a Republican.
Good to
see where exactly you are coming from."""

WTF did that come from? Must be somekindof Al Franken spagmasm???
Wonder where Geneen Giraffala weighed in on that one???

Anyhow, you failed to name a single >>>liberal<<< youth organization
that promotes character. And I know why that is. It's so friggin easy
to know why that is.

C'mon liberal Mike. Ask me why it's so easy to know that. C'mon, ask
why!!!

- Mike KB3EIA -

Mike, I noticed that you failed to list any liberal organization that
was pro character building.

"Reply"

Oh, my! 2004 becoming 2005. My 10YO Cub Scouts/America son just got
an Eddie Bauer 0 deg sleeping bag. And he earned his just "readyman"
badge and knows the basics of first aid. Maybe someday he'll hike-in
and save your liberal ass.

Len, dammit, none of this pulse crappola. It was either CW or it was
RTTY. Doan confuse us widda facts.

Stoppit, dammit, stoppit!!!

I'm just sick and tired of you tellin' it like it was. The truth doan
count for sh*t aroun here anyways!

Now if you have a magazine like QST to relate real radio stories, well
then there might be sum dat lissen.

Guys like Jimmy Who dat doan know sh*t about real commitment, real
sacrifice. Only know about ENG101 and if the government loans are
going through. Forget about Fuchu and DaNang. They gots more
important tings to do so dey can tell us about how it really was.

> >> But, in 2004, U.S. radio amateurs MUST still pass a morse test

On this last day of the 4th year of the new millenium, I can only add,
"didit!"
All of the rest of amateur radio should be embarassed.

First let me say your post gave me probably my last great laugh of
2004. I love the bung-holio reference (I get it). While you were at it,
you should have added record collectors to your tirade. Or as my (then
17) daughter put it when I dragged her to a record collector show a few
years ago; "The ratio of men to women vs. the number of pony-tails is
way out of whack here". ---Ken

Wonder where the sales figures are WRT amplifiers?

> * We have antenna measuring contests with home-built antennas, they
don't

Name the last antenna measuring conest that you were at?

> * We conduct emergency comms when other services are down, they're
down

Name the last commercially comms that were down that you stood in for.

> * We don't have to operate on pre-assigned frequencies, they do

Absolutely no one has to operate on any designated frequency when an
emergency is taking place. Thought you were a ham an knew that.

> * We have on-the-air contests (lots of them), they can't

BFD

> * We can vary our power from 0 to 2KW, they can't

No we can't.

> * We exchange post cards after a QSO, they don't

They could.

> * We're frequency-agile with a VFO, they aren't

You assume too much. Way too much.

> * We have swapmeets ("ham fests"), they don't

They swap yachts.

You swap mailboxes so's you can collect sall signs. Idiot.

> * We can build our own equipment, they can't

Why can't they?

To Time Magazine:

Rev Jim has gotten something right WRT amateur radio. He's tried, and
tried, and tried, over the past several years but to put it bluntly,
Rev Jim is a total eff-ing screwup.

May I refer Time Magazine to W5YI for sumptin close to the truth WRT
the amatuer radio service. Jim actually means well, but his ego is
outta conrol. tnx.

Indeed many do.

They take and they take, good whatever.

Good everythig!!!

Do you count yourself among those???

> That the freedoms we enjoy are here, because of the military service
of
> others, is greatly appreciated by most--

Huge, huge appreciations. Yellow magnet ribbons and all....

there are those that are just plain
> idiots (and Jim is not one of them).

Why do you say that Jim is not?

As a matteer of fact, I think Jim IS one of the idiots.

And, to read your comment above
> without having paid attention to this thread, seems to say that
anyone who
> doesn't meet your standards of service should just roll up and die?

If you like you can read it that way.

But that is not what I meant. Meanwhile, Len, who has served is
supposed to roll up and die.

Why is that???

Surely
> I am mistaken in my interpretation of your comment, above.
>
> Kim W5TIT

To be -perfectly- clear, I think Jim is a welfare freeloader to avail
hisself to the freedom to go to USA engineering schools, to avail
hisself to a career in engineering, and then to comment on how bad life
in America is without ***ever*** having done a Goddamned thing to risk
even a split fingernail, all the while putting down Len Anderson who
has contributed more to America than a single Jim/N2EY fingernail.
Kim, you did ask.

Hey, Len. Happy New Year.

I think it's been about a decade since I joined you on RRAP. I think Jim/KH2D was exiting at that point, and I never did see his stuff on RRAP. I guess time flies when your fighting bad guys. I thought things were actually turing around lately, but the closet libs decided it was time to exit the closets after the election. I guess MoveOn dot Org gave them the strength to belittle their fellow man. Rich people know more than everyone else. In your face and all that.

Anyway, I've responded to several of the Mike/Jim postings of late, and I'm really saddened that we have such sorry-assed citizens. Jim sorely wants to compare America to a falling Roman Empire, and with all of the help that he can muster, it just might come true. I'd like to kick his liberal behind, but I'd end up getting butt-f***ed by his constituents at the county workhouse when it was all over with. I sure wish he'd invite them over to his house for a New Year's Eve party so they could get all of the hedonism out of their systems.

Oh, well. What can you expect from people who have absolutley ***nothing*** invested in America? Yellow magnet ribbons on their trunks??? Yep, they support the troops. Hi, hi!!! Yellow magnets!!!

Support America when it really didn't matter. Oooh Ahh and all that. Wonder how many gallons of desalinated IO water they've drank in their lifetimes?

Oh, never mind. Kelly is gonna jump in here with all his military experince. Har de har, har.

Indeed. Len is being paid by the contra-ARRL subversives. And he has nothing to do with the counter-sniper-subversive-counter-sniper-sniper operations that the ARRL field DXCC checkers are conducting. You'll know them by their yellow magnetic ribbons stuck to their trunks.

Meanwhile, Jimmy Carter is planning a counter-desert offensive defense to test automotive oil additives for the info-mercials that take over all of the freqs adjacent to the PBS freqs on the public airwaves. Gives Jim something to do between his anti-American postings.

>Then lotsa people on RRAP owe Len Anderson an apology.

Amateur morsemen are far superior to professionals in radio.
They have nice Titles and federal call signs and all kinds of
good stuff washed into their brains like a henna rinse. They
apologize to NO one. :-)

>When I see those apologies, I'll stop pointing out that "true blue" Jim
>has never served his country in any capacity, yet has availed himself
>to the finest education and standard of living in a system where the
>freedom to do so were paid for with the blood of other people's sons.

He "served in 'other' ways." :-(

He knew all about the space business without having worked
in it. Good trick, even if he wasn't rated in soldering to NPC-200.

He knew all about USSR military aircraft too, even though he
didn't shoot any Bears for naval intelligence (another non-
serviceman did that).

He has a BSEE and an MSEE, double-degreed, supposedly in
an electronics industry but won't say which one, but he can do
morse code at high rate...which makes him far superior as a
2004 radio person.

Whoopee. If an NCTA mentions degrees, yet another "superior"
calls night college classes something derogatory, implying they
are for some kind of civics for citizenship candidates or are
classes for remedial English. If I mention that my wife has TWO
Masters Degrees, that "superior" person calls the University of
Illinois at Urbana a "correspondence school." And my wife gets
a personal insult because she is married to me, all courtesy of
that medically-discharged veteran of "seven hostile actions."
Late in the year this "healthcare professional" told me to go have
a stroke. :-)

Yet another "superior" (perhaps the radio god of all) claims actual Department of State employment yet doesn't get into the socio-political "cures and remedies" spouted by all those other PCTA "superiors" who've never had any diplomatic experience or politics or of economics (beyond their personal account stuff) but regularly spout All About it. Never mind that national issues on economics or politics don't have much effect on radio regulations or ham radio. That most-superior person claims he was "in" Vietnam but can't or won't describe any duties "in" Vietnam or that they involved radio of any kind. All he do is diss and cuss at the person he doesn't personally like. He IS the superior one. He say so.

Now we've got Mike Coslo, the self-styled "moderator" who wants this newsgroup to become a nice little private chat room for all the PCTA "buddies" and to heck with Schleck and his guidelines to what this newsgroup is about. Coslo also "serves in 'other' ways."

>Happy New Year.

Okay, this is almost Day One of the year 2005 and I'm writing during some Rose Parade coverage on TV, wondering if the Pasadena weather will clear enough for a nice spectacle. This holiday's weather here is very iffy.

The Rose Parade is an enterprise with a $10 million budget and one amateur has claimed that ham radio was "essential" to the organizers. It never was, but that's another one of many myths that grew and prospered with the fantasyland folk who get way too far into a hobby and lose their grip on reality.

This private chat room called rec.radio.amateur.policy doesn't look like a good place to actually discuss "policy" in re ham radio. All have to mantra-mumble selected sayings from the Church of St. Hiram (HQ in Newington) and Believe in the efficacy of morsemanship. All discussion is pointless. It's all a trash can of insults on the persons holding no-code-test advocacy.

Morse code uber alles! Microphones delenda est!

Happy 2005. :-)

LenAnderson@ieee.org

"Amateur morsemen" are far superior to professionals in AMATEUR
radio.

This forum is about AMATEUR radio...Not "professional", military,
Public Service, PLMRS, etc etc etc.

> >When I see those apologies, I'll stop pointing out that "true blue"
Jim

I am sure he can cut-and-paste as well as you do, Lennie, however
I bet Jim's far more competent and knowledgeable in "space business"
than you without the URL's to click on.

> He knew all about USSR military aircraft too, even though he
> didn't shoot any Bears for naval intelligence (another non-
> serviceman did that).

He sure does...And funny you should mention that since it was YOU
that brought up being threatened by Mr Tupolev's turboprop wonder
despite the fact it wasn't in servce until YOU were out of theater!

> He has a BSEE and an MSEE, double-degreed, supposedly in
> an electronics industry but won't say which one, but he can do
> morse code at high rate...which makes him far superior as a

Lessee...Dave Heil spent a life career in the State Department and
YOU didn't...Dave was actually AT those places we only read about or
watched on TV. And Lennie was...In Japan at a rear-area radio relay
station for a couple of years in the 50's...

> Never mind that national issues on economics
> or politics don't have much effect on radio regulations or ham
radio.

Absolutely, without contradiction, one of the most assinine
assertions you've ever made, Lennie.

Economics has been one of the MAJOR driving factors behind
numerous impacts on the Amateur Service!

Uhhh...Seems he's not lied about any of his duties to me, Lennie.

On the otherhand, we have you, an ex-Army radio meachanic claiming
to have handled over "2.1 million" bits of traffic until the
mathematics of your silly claim were laid bare.

Then you tried to dance around it.

And let's not forget how glorious YOUR Army career was simply by
having been in a unit that had suffered KIA's three years before you
were ever there.

Mike hasn't suggested that there be a moderator.

He HAS urged civility and cooperation.

Of course we know that with you here, Lennie, that's about as
likely to happen as my Brittney fantasies.

>The rules used to say "No retests
>within 30 days" so that would mean that they changed
>the versions every 30 days.

Not necessarily!

As K2ASP points out, there were several versions. The chances of someone getting the same version twice in a row were pretty slim under such a system, and even if they did, it was a month ago.

>Now, if they only had
>two versions, one could wait 60 days and see the
>exact same test they had before. I don't suppose
>the examiners had kept track to see if anyone actually
>did that. Or more likely they didn't worry about it.

As I expererienced it, the 30 day stuff was simply part of a much bigger system. Worked like this:

Tests were given here in Philly Monday through Wednesday. For a kid in school, you had to wait for summer vacation or a school holiday that wasn't also a govt. holiday. Playing hooky to take a radio exam just wasn't in the cards for most of us. Working folks had it even tougher because they usually had to take at least a half-day off work.

Because of the MWF situation, if you flunked a test you couldn't come back for at least 5 weeks.

Those of us lucky enough to live close to an FCC exam point just took the subway into town. Those in more remote areas often had a much longer and more difficult trip.

What all of this did was to stop people from just going to the FCC office day after day until they got enough correct answers to pass. Instead, people tended to be as prepared as possible before taking the tests. They weren't really that hard if you knew something about amateur radio.

>ahead, but if you cause something bad to happen, don't try to use the drugs
>as
>an excuse.

Uh huh...And that won't work.

We have rules like that for alcohol and firearms yet people still insist on
being stupid with them.

The problem with the laws are that we WON'T use them to their full extent.

Personally, I believe that we have more than enough laws to punish people
who use those weapons illegally or improperly. Yet everytime there is some
tragedy with a firearm, we go through yet another knee-jerk reaction of
insisting that we take away the guns rather than enforce the laws on the books.

Same with alcohol. It's only been in the last 10-15 years that we've
finally decided to drop the hammer on alcohol abuse and DUI, but even then it's
not unusual to find people who are still behind the wheel after four, five or
more DUI's.

So...as I see it the ONLY benefit to legalizing drugs would be the
potential tax revenues. But then we'll only spend those revenues building
rehab facilites or more prisons to house the offenders, so what's the use?

These are the numbers of amateur licenses held by individuals on the
stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of December 31, 2004:

Novice - 29,765 (decrease of 19,564)
Technician - 265,534 (increase of 60,140)
Technician Plus - 54,152 (decrease of 74,708)
General - 138,287 (increase of 25,610)
Advanced - 77,948 (decrease of 21,834)
Extra - 106,087 (increase of 27,337)

Total Tech/TechPlus - 319,686 (decrease of 14,568)

Total all classes - 671,773 (decrease of 3019)

It is what you are saying. I note that Republicans are considering
legislation to weaken the ethics rules, and you answer that Democrats
don't support the Boy Scouts, and that Republicans believe in God.

You never even addressed the original question.

So YES, you ARE saying that it is okay to be corrupt as long as you are
Republican!

> Anyhow, you failed to name a single >>>liberal<<< youth organization
> that promotes character. And I know why that is. It's so friggin easy
> to know why that is.

> C'mon liberal Mike. Ask me why it's so easy to know that. C'mon, ask
> why!!!

HAH, Good one Brian. I am not liberal. I am independent, registered and
otherwise. I take my political philosophy from what is out there, and
think about it, rather than just do what "my party" tells me to.

So from your other postings, I can tell you that in some respects you
are what to the left of my philosophy. You don't know what all my
positions are because they can't be looked up by party platform.

So whats it like being a liberal by comparison.

I'm interested in all politicians being ethical, not just Republicans. Is that a bad thing? Is is a good idea? Might it be better to think about it rather than respond by accusing me of not supporting the Boy scouts, being a liberal, or that

> - Mike KB3EIA -
>
> Mike, I noticed that you failed to list any liberal organization that
> was pro character building.

Yeah, the Boy scouts.

I don't see anything about the Boy scouts being a republican or conservative organization.

> Oh, my! 2004 becoming 2005. My 10YO Cub Scouts/America son just got
> an Eddie Bauer 0 deg sleeping bag. And he earned his just "readyman"

> and save your liberal ass.

Brian, spare me the foaming at the mouth stuff. If you want to believe that the Boy scouts are the reason that it is okay for the Republicans to soften up the ethics rules. Then so be it, I'll accept that as your answer. I was in the Boy scouts, My son was in the Cub souts and Boy Scouts. I occasionally make presentations to the local Boy Scouts as part of their meetings or to get interest going for possible merit badge work. I have been asked and am considering being a merit badge counseler.

I might suggest going back and reading the Scout oath and Scout law.

So Jim, filtering out the big drop due to the "honeydo" Technicians dropping out, what are the numbers? When we see that big 14.5K drop in Technicians, I would assume that some of the drop was due to upgrading, but most to that dropoff.

All in all, when considering that big deficit, it looks like we could be climbing out of that hole eventually?

That isn't the point.

The point is that at the Democratic National Convention, the Boy Scouts
were booed while performing a flag ceremony and reciting the Pledge of
Allegiance. It was televised.

> > I know lots of Democrats that support the Boy Scouts, and lots of

Huh???

You brought up "fringies." Right now that means the Christians. You
know, people who attend church. Declaring ones faith and attending
church somehow makes a person bad.

Wow! By declaring a party, the conservative voter need not even see
the ballot. They must vote the party line.

I hadn't known that. Thanks for a lesson in civics and the
rightiousness of being Independant.

FYI, having core values and beliefs doesn't bind you vote for poor
candidates, unless you are offered only poor candidates to vote for.
Many unfortunate voters find themselves voting for "the lesser of two
evils." As a result, many conservative voters stay home and the left
takes over.

> So from your other postings, I can tell you that in some respects
you
> are what to the left of my philosophy. You don't know what all my

> Yeah, the Boy scouts.

Good answer. Hi!

> I don't see anything about the Boy scouts being a republican or
> conservative organization.

The organization teaches self reliance, personal achievement and
personal responsibility among other things. They constantly work on
civic projects which rely upon volunteerism and donations, not taxes
and more government workers.

The BSA doesn't have a welfare merit badge.

> > Oh, my! 2004 becoming 2005. My 10YO Cub Scouts/America son just

badge
> work. I have been asked and am considering being a merit badge
counseler.

I brought up the 1996 incident where the Democrats booed the BSA at their national convention. I said nothing about the Republicans.

Why you continue with your charade that the BSA is giving the Republicans a pass on ethics is beyond me.

> I might suggest going back and reading the Scout oath and Scout law.
>
> - Mike KB3EIA -

Thanks, I will.

On my honor I will do my best To do my duty to God and my country And to obey the Scout law; To help other people at all times; To keep myself physically strong, mentally awake, and morally straight.

Hmmm? Doesn't look like an apology.

Anyway, if Jim and Kelly hadn't put forth the idea that they have served, all this wouldn't be an issue.

I think I see something here, Brian. I write something, and you see something else. If I meant Christians, I would have said Christians. Not all Christians are Republicans. My family is for the most part, devout Christians and they are not Republicans.

In your effort to make this so Black and white, you put words in my mouth. Don't, if you want to discuss things in a rational manner.

Republican fringe groups:

Neocons - Neocons are liberals that have had waaaay too much coffee and have a nasty attitude for it. They are liberalizing the Republican party at exactly the right time for their purposes. At this time, a lot of the republican faithful are so polarized against Democrats that if the party platform were to become a clone of FDR's New deal, they would rally behind it.

The far right nasty groups. These take many forms, such as the new south people that want history "revised", to the people that want to rewrite science under the guise of their religion. Don't tell me this is dissing Christians. This is ideology. This is the same thing as when the Commies in Russia decided that genetics was not compatible with their stupid workers revolution. They believed that will power could allow animals to change themselves in amazingly short period of time. Fact is it was suppression of fact, and they eventually paid for it.

Now are their fringe groups on the Democrat side? You betcha. They have the "alternative sexual reality groups, they have the academic left, they have them to match the pubs, just on the other side of the spectrum.

What I am telling you is that your party is being hijacked by liberals. And enough Pubs are going to go along with that.

Really? :-)

Then cite your "credentials" as a political pundit.

Cite your "credentials" as a national economist.

Cite your "credentials" as a "space business worker."

Don't have any of the above, do you? Yet you've discussed all
those things in HERE, in this forum...which you blabber that it
is "all about amateur radio." :-)

Tsk. Starting off the new year with the usual hypocrisy.

Oh, I understand...as a "healthcare professional" you took an
oath of Hipocrisy! :-)

>I am sure he can cut-and-paste as well as you do, Lennie, however
>I bet Jim's far more competent and knowledgeable in "space business"

>than you without the URL's to click on.

Tsk. Rocketdyne, formerly a Division of Rockwell International (now purchased by Boeing), and EOS (Electro-Optical Systems), a Division of Xerox were both engaged in the space business and both presented me with salary checks for many years...all for doing things IN the space business. The IRS and California Franchise Tax Board verified that the forms they received (separately, forwarded by employers) did indeed indicate I was IN the space business...as did the FBI, DCASS, and some other alphabet soup agencies.

No "cut and paste" in any of that, sonny. I've laid hands on an SSME on a test stand and been through a Shuttle being assembled...held many an unmanned spacecraft electronics package being assembled and tested in a clean room...not to mention meeting the first shuttle astronauts John Young and Bob Crippen.

So, what does "Jim" do? He won't say anything more than he "works in vehicular transportation" according to an ECFS comment on the FCC website.

So, what does the Avenging Angle do? NOTHING in the "space business," never has. At best he exaggerates his "engineering" job as a Purchasing Agent for a set-top box maker! Lasted less than a half year. Tsk.

>> He knew all about USSR military aircraft too, even though he

>> Masters Degrees, that "superior" person calls the University of
>> Illinois at Urbana a "correspondence school."
>
>She obviously doesn't have the requisite skills to get you into
>therapy or counselling, ergo I doubt she has the credentials you cite.

Poor baby...mentally deranged and still crawling the newsgroup,
are you? It's a given that the insane are the last ones to admit
they are nuts.

Tsk. The Avenging Angle has claimed all he has to do is pick up
a telephone and "have authorities commit another" just because
you have an LPN whatsis. So far you haven't done that, not with
me, not with Brian Burke. Because you DON'T have any such
authoritiy as a nurse. You CANNOT do it, yet you keep on saying
so. That's nuts.

>> And my wife gets
>> a personal insult because she is married to me, all courtesy of
>> that medically-discharged veteran of "seven hostile actions."
>> Late in the year this "healthcare professional" told me to go have
>> a stroke.
>
>No..I said PLEASE go have a stroke.

Oh, my, that makes it "all right," does it? :-)

PLEASE cite the where and when of your "seven hostile actions,"
mighty warrior (of fantasyland).

PLEASE cite the government regulation that establishes "MARS
>>IS<< amateur radio!"

You can't do any of those things, can you?

That's because they are NOT related to this newsgroup general
subject matter. You think that the whole of this newsgroup is to
give you some open forum to insult and demean anyone who
doesn't agree with your fantastic opinions. You are the sicko.

>Lessee...Dave Heil spent a life career in the State Department and
>YOU didn't...Dave was actually AT those places we only read about or
>watched on TV.

We are all still waiting for the cite of the Avenging Angle's mighty
"seven hostile actions" he claims he had.

We are all still waiting for the cite of "MARS >>IS<< amateur radio"
from the mighty warrior and regulator of everything in his fantasies.

>And Lennie was...In Japan at a rear-area radio relay
>station for a couple of years in the 50's...

Three years, sicko. Three.

Before your existance on earth, grasshopper. Powerful HF
transmitters...3 1/2 dozen of them...13 microwave radio relay
terminals, each carrying 24 voice channels. [just to name a
few things] Nothing carrying any on-off morse mode traffic.

You haven't done a thing in military radio comparable to that.

Poor baby. Feel left out, do you? Can't blame you for getting
angry...someone comes along who has done MORE than you
beginning BEFORE your time and it spoils the heck out of your
bragging and fantasy claims.

>> Never mind that national issues on economics
>> or politics don't have much effect on radio regulations or ham
>radio.
>
>Absolutely, without contradiction, one of the most assinine
>assertions you've ever made, Lennie.
>
>Economics has been one of the MAJOR driving factors behind
>numerous impacts on the Amateur Service!

Someone has "impacted" you and it sounds like damage to your
thinking apparatus. Poor sicko.

More tsk. "MAJOR impact?" :-)

Amateur radio is a radio activity engaged in WITHOUT pecuniary
interest! [that's an old FCC definition of "amateur radio" and
explains the use of the word "amateur" in the service title]

Sunnuvagun!

Another avowed PCTA and super morseman claims he can
make a "Type 7" radio for just $100 and "recycled parts."
Doesn't sound like some kind of "MAJOR impact" to the nation,
more like a personal decision on his part.

Does Alan Greenspan get your input? :-)

>On the otherhand, we have you, an ex-Army radio meachanic claiming
>to have handled over "2.1 million" bits of traffic until the
>mathematics of your silly claim were laid bare.
>
>Then you tried to dance around it.

Tsk. Was NOT a "radio meachanic" nor even a "mechanic." :-)

E-5, Microwave Radio Relay Operations and Maintenance
Supervisor, MOS 281.6 under the old MOS numbering system.
Also doing Fixed Station Transmitters Operations and
Maintenance Supervision prior to arrival of the microwave radio
relay systems.

Army station ADA was only the third largest radio station in the
Army Command and Administrative Network (ACAN) yet it
handled 220,000 messages a month average in 1955, something
printed in the Stars and Stripes military newspaper of that year.
Since ADA was in operation 24/7 and there were so many radio
circuits active at any one time, all I did was estimate how many
messages were transmitted per operating team shift (there were
four teams on a rotating shift basis). Since the swing and mid-
night shifts didn't have resident Officers In Charge, the "trick
chief" (team supervisor) bore the direct responsibility to see that
communications were maintained. They were.

NO ONE "laid bare" any of my numbers (which were never
claimed as anything more than an estimate since they were
not logged as such but the operational radio circuits were
definitely logged to the minute over the TTY order-wire.

I say ESTIMATE solely because some of the radio circuits
carried several multiplexed channels. The SSB transmitters
each had two voice channels plus 6 to 12 TTY channels. Some
transmitters had four time-multiplexed TTY channels done with
frequency-shift keying for the lot. ADA kept increasing its
capacity in three years, from only 36 transmitters in 1953 to 43
at the beginning of 1956. It grew more up to 1963 when the
USAF was given operational control of the Central Honshu HF
communicaitons. That ceased in 1978 when the facility was
closed and all given to the Japanese government; USAF had
other communications means to keep worldwide comms going.

>And let's not forget how glorious YOUR Army career was simply by
>having been in a unit that had suffered KIA's three years before you
>were ever there.

Tsk. You are still one SICK puppy.

The 8235th Army Unit, a Signal Battalion, lost 23 total, 19 at the
beginning of July, 1950, the other four in years following. Hardy
Barracks (the billet for most of the 8235th) was named for
Corporal Elmer Hardy, one of the Signalmen killed in that July
transport crash in Korea. Camp Tomlinson was the new name
for the Kashiwa transmitters site, given during a dedication in
1956, honoring one of the officers killed in that July crash.

I still honor those Signalmen who lost their lives...they were
members of MY Signal unit that I served in. I've stood Retreat
more than once to honor those Signalmen and other Army
soldiers during the Korean War and for the on-going continual

Truce period from July 1953 to the present.

You don't like that I honor the men of my Army unit. Tsk. Go and report me to Hal and Ted Barker of the Korean War Project. Go and report me to the Secretary of the Army...or even the Secretary of Homeland Security (whoever that might be now). Go and report me to "authorities" and "have me committed" as you claim you can do with your nursing title, all in a single telephone call.

Better yet, have yourself committed and save all that insulting personal trash tossing you seem to do constantly with anyone who disagrees with you.

You be one Class A Sicko with oak leaf clusters. Get help.

Don't have a cow.

> So Jim, filtering out the big drop due to the "honeydo" Technicians
>dropping out, what are the numbers?

You see them above, Mike.

Of course some "honeydo" Techs, Novices and Tech Pluses are dropping out. And
some of the older hams are dying off. But beyond that it's all speculation.

>When we see that big 14.5K drop in
>Technicians, I would assume that some of the drop was due to upgrading,

>but most to that dropoff.

There's no way to tell from the data.

Remember that the number of Tech Pluses is dropping for three reasons:

1) Licenses allowed to expire
2) Upgrades to General and Extra
3) Tech Pluses renewed as Technicians

If the rules are simply left as-is, there will be no more Tech Pluses in 5 years and 4 months from now. They will all have gone one of the three routes listed above.

> All in all, when considering that big deficit, it looks like we could
>be climbing out of that hole eventually?

We were told in 1990 that dropping the code test for Tech would cause growth. We got some growth in the short term. Then we were told in the late 1990s that dropping 13 and 20 wpm, and simplifying the writtens, would cause growth. Again we got some growth in the short term.

In neither case did we get long term growth.

Perhaps the problem isn't the tests?

>Public Service, PLMRS, etc etc etc.

Really? :-)

Then cite your "credentials" as a political pundit.

Cite your "credentials" as a national economist.

Cite your "credentials" as a "space business worker."

Don't have any of the above, do you? Yet you've discussed all
those things in HERE, in this forum...which you blabber that it
is "all about amateur radio." :-)

Tsk. Starting off the new year with the usual hypocrisy.

Oh, I understand...as a "healthcare professional" you took an
oath of Hipocrisy! :-)

>I am sure he can cut-and-paste as well as you do, Lennie, however
>I bet Jim's far more competent and knowledgeable in "space business"

>than you without the URL's to click on.

Tsk. Rocketdyne, formerly a Division of Rockwell International (now purchased by Boeing), and EOS (Electro-Optical Systems), a Division of Xerox were both engaged in the space business and both presented me with salary checks for many years...all for doing things IN the space business. The IRS and California Franchise Tax Board verified that the forms they received (separately, forwarded by employers) did indeed indicate I was IN the space business...as did the FBI, DCASS, and some other alphabet soup agencies.

No "cut and paste" in any of that, sonny. I've laid hands on an SSME on a test stand and been through a Shuttle being assembled...held many an unmanned spacecraft electronics package being assembled and tested in a clean room...not to mention meeting the first shuttle astronauts John Young and Bob Crippen.

So, what does "Jim" do? He won't say anything more than he "works in vehicular transportation" according to an ECFS comment on the FCC website.

So, what does the Avenging Angle do? NOTHING in the "space business," never has. At best he exaggerates his "engineering" job as a Purchasing Agent for a set-top box maker! Lasted less than a half year. Tsk.

>> He knew all about USSR military aircraft too, even though he
>> didn't shoot any Bears for naval intelligence (another non-
>> serviceman did that).
>
>He sure does...And funny you should mention that since it was YOU
>that brought up being threatened by Mr Tupolev's turboprop wonder
>despite the fact it wasn't in servce until YOU were out of theater!

Tsk. My military service obligation ended in 1960...with receipt of my Honorable Discharge. But, having actually worked IN the aerospace industry for a long time before that year and for years afterwards, it might be easy to slip up on who flies what where when making casual mentions of things among these aerospace gurus of self-defined "experience."

>> He has a BSEE and an MSEE, double-degreed, supposedly in
>> an electronics industry but won't say which one, but he can do
>> morse code at high rate...which makes him far superior as a
>> 2004 radio person.
>
>When matched against an UNlicensed ex-radio technician
>wannabe...Sure!

Tsk. There you go talking trash again. You can't stop, can you?

You are one sick little puppy, always always mean-mouthing the
person (and relations) of anyone disagreeing with you.

>> Whoopee. If an NCTA mentions degrees, yet another "superior"
>> calls night college classes something derogatory, implying they
>> are for some kind of civics for citizenship candidates or are
>> classes for remedial English. If I mention that my wife has TWO
>> Masters Degrees, that "superior" person calls the University of
>> Illinois at Urbana a "correspondence school."
>
>She obviously doesn't have the requisite skills to get you into
>therapy or counselling, ergo I doubt she has the credentials you cite.

Poor baby...mentally deranged and still crawling the newsgroup,
are you? It's a given that the insane are the last ones to admit
they are nuts.

Tsk. The Avenging Angle has claimed all he has to do is pick up
a telephone and "have authorities commit another" just because
you have an LPN whatsis. So far you haven't done that, not with
me, not with Brian Burke. Because you DON'T have any such
authoritiy as a nurse. You CANNOT do it, yet you keep on saying
so. That's nuts.

>> And my wife gets
>> a personal insult because she is married to me, all courtesy of
>> that medically-discharged veteran of "seven hostile actions."
>> Late in the year this "healthcare professional" told me to go have
>> a stroke.
>
>No..I said PLEASE go have a stroke.

Oh, my, that makes it "all right," does it? :-)

PLEASE cite the where and when of your "seven hostile actions,"
mighty warrior (of fantasyland).

PLEASE cite the government regulation that establishes "MARS
>>IS<< amateur radio!"

You can't do any of those things, can you?

That's because they are NOT related to this newsgroup general
subject matter. You think that the whole of this newsgroup is to
give you some open forum to insult and demean anyone who
doesn't agree with your fantastic opinions. You are the sicko.

>Lessee...Dave Heil spent a life career in the State Department and
>YOU didn't...Dave was actually AT those places we only read about or
>watched on TV.

We are all still waiting for the cite of the Avenging Angle's mighty
"seven hostile actions" he claims he had.

We are all still waiting for the cite of "MARS >>IS<< amateur radio"
from the mighty warrior and regulator of everything in his fantasies.

>And Lennie was...In Japan at a rear-area radio relay
>station for a couple of years in the 50's...

Three years, sicko. Three.

Before your existance on earth, grasshopper. Powerful HF
transmitters...3 1/2 dozen of them...13 microwave radio relay
terminals, each carrying 24 voice channels. [just to name a

Not ironic at all. They used short-term fixes to delay the problem. Remember that Nixon took over in Jan 1969, before the inflation really began to take off. And long before the oil crises.

>>In 1973 we got the OPEC boycott, and when it ended gasoline prices were

Hello, Len

I don't know how many amateurs are going to even get much above 1 GHz. As you point out, high power is not necessary due to high gain antennas being easy to make (or, perhaps, purchase). The problem might be in the aiming.

I got a bit lucky when I put in my Direct Tv system some years ago. Running the coax and feeding into the house was easy; the antenna pointing became a bit more problematic, both due to a bad compass and a poor choice of help.

I invited a couple of friends over. Since they weren't hams and I didn't have (as I now do) a cordless phone with both a base and remote (that is *great* for work on the antenna), nor did we have cell phones, I needed one guy to watch the set and report signal strength and holler to the second guy in the kitchen who would holler to me on the roof. I checked the mount to set up and verify the supporting rod was indeed vertical, set the elevation, and, using a compass, set the direction of the antenna. They reported nothing. I went to check the compass again as the elevation was easy to set. I noticed that the needle was *not* pointing where it should be. I know that from my porch, the North star sits exactly in line with the back of my neighbor's house and I was in the proper position, albeit higher, and North should be exactly in line with the end of my neighbor's house. The needle should have pointed a bit East of that, but was pointing considerably towards the East. Sigh. I came back down and got the manual as it shows the deviation from true North. I went back on the roof, pointed the N on the compass exactly towards the neighbor's house, and carefully looked across the compass to see where the antenna should point (with the proper true headings from the installation manual). I made the adjustment to the antenna and yelled down. I tried for a couple of minutes and got no response from below.

Irritated, I packed up the tools and went back down - and found everyone drinking my beer!!!! Sigh ... ok, I went in to the television to turn it off - and there was a signal indication of 85! I pulled out the credit card and called Direct Tv. Bam! On came the whole 9 yards. Further testing the following day revealed that I could not get a better signal. Lucky indeed. BTW, by the next day, I had run coax both upstairs to the bedroom and also into the kitchen, so I only needed one helper. He could watch the signal strength in the kitchen and yell directly out the window to me. I chose my helper a bit more judiciously ;)

What does that have to do with 10 GHz transmission? Even purchasing equipment, someone is going to have to be able to aim the darn thing (gain comes at the expense of beamwidth, naturally) - and have some idea of local topography if they wish to take advantage of either natural or man-made objects. Of course, if the object is moonbounce, taking a dish which will develop the proper gain (and I'm guessing here - likely approaching 30 dBi), that thing is going to have to be fairly accurately pointed.

My Morse key has two settings: up and down. I can handle that, but some folks might not be able to handle something a bit more complex than that (although many can).

Interplanetary QSOs might prove *very* interesting. You certainly can't call CQ. You'd have to set up pre-arranged transmit times. Both could transmit information at a given time and the both wait .... and wait ... and wait whilst the electromagnetic radiation made its' way at the speed of light for a number of minutes (or hours, depending upon how close the planet - likely mars - was at the time). Obviously, mars is quite close to

us only at certain times and even then is what - 35 million miles away?
Don't forget to adjust for Doppler shift as the planets are moving closer or
farther away. Narrow bandwidths can give you better signal to noise ratio,
but narrow bandwidths can also make that Doppler shift a lot more difficult
to deal with. I doubt wideband FM would cut the mustard due to a *huge*
increase in noise with the much larger bandwidth over narrow bandwidth
modes.

I don't think I'm likely to be around by the time ordinary folks can take a
trip to mars .... ;)

Dang, where'd I put my Morse key?
:))

I don't give a rat's patooie about your mindless little joust with Coslo here but I do care about the Boy Scouts. Or I used to and I have some insghts on the topic you don't have Burke. Which might explain a few things which go on 'way over your head as usual.

My senior brother of two of 'em was the CEO of the local BSA Council about five years ago and engineered the merger of our suburban Council, the one we both grew up in, with the next-over failing big city council. That noteworthy maneuver raised hackles galore out here in our lilly white Rebublican WASP 'burbs of course but it saved what was left of the broken city council, a seemingly impossible management coup given the politics involved.

Which in turn got the attention of the mahouts who rule scouting at the national level. He was forwith invited to join the national board of directors. I asked him why he declined the invitation. I can't quote his words directly but they went something like: "I have no interest in trying to work with a bunch of Dallas 'silent majority' type Bible-pounders hellbent on imposing their "visions" on scouting."

That is a big part of it. Even if a lot of hams were there, it would be
pretty much a sked only comms.

This leads to prospective users having a need to work in pairs or
teams. It will not be about making QSO's with multiple people, you will
be wanting to put your equipment together, and try it out. So right
away, the users will need to be interested in mainly putting a station
together and using it a few times, then moving along to the next goal.

And of course, the major attraction of these GHz and up frequencies is
that they DON'T go very far. You have to be the type of user that
doesn't care to make long distance QSO's!

Despite the ARRL's promotion and record keeping, for AIAP's these
frequencies are *very* local.

> Amateur morsemen are far superior to professionals in radio.

They might be or they might not be. So far, you're the only fellow making such a claim. Radio amateurs who use morse may or may not be superior to professionals in radio who use morse. They are certainly superior in the use of morse code to professionals in radio who don't know morse code.

> They have nice Titles and federal call signs and all kinds of
> good stuff washed into their brains like a henna rinse. They

You don't believe that to be possible?

> He knew all about the space business without having worked
> in it. Good trick, even if he wasn't rated in soldering to NPC-200.

Do you have information that he didn't work in it?

> He knew all about USSR military aircraft too, even though he
> didn't shoot any Bears for naval intelligence (another non-
> serviceman did that).

He knew that the ones you wrote about didn't exist at the time of your service.

> He has a BSEE and an MSEE, double-degreed, supposedly in
> an electronics industry but won't say which one...

What's that to you?

> ...but he can do
> morse code at high rate...which makes him far superior as a

> 2004 radio person.

Being able to handle morse certainly gives him more tools at his
disposal than a radio amateur who is unable to send or receive morse.

> Yet another "superior" (perhaps the radio god of all) claims actual
> Department of State employment...

Yeah! Remember how, according to you, I didn't appear on any list of
key employees until I offered proof in the form of several archived
urls?
After that, the "Key Officers of Foreign Service Posts" list became
telephone contact lists to you. Nobody disputes that at the time of my
"claimed" Foreign Service assignments, I actually appeared on the ham
bands from those various places. Do you know anyone who travels to
various countries, staying for two or three years and operating on the
ham bands during that time just so he can fake a claim to Department of
State employment? Gosh, but you're a loon, Len.

I was never told that there was a requirement set out by you which had
to be met. :-)

> Never mind that national issues on economics
> or politics don't have much effect on radio regulations or ham radio.

> That most-superior person claims he was "in" Vietnam but can't
> or won't describe any duties "in" Vietnam or that they involved
> radio of any kind.

I claim that I was in Vietnam because I was in Vietnam. My duties, as
previously stated here, did have to do with radio of some kind. Those
duties could be found on the web by anyone with any ability at using a
search engine.

> All he do is diss and cuss at the person he
> doesn't personally like. He IS the superior one. He say so.

As a radio amateur, I'm much superior to you. I've had an amateur radio
license for 41 years. You have none. You have never had one. Even the
guy who received his ticket in last week's mail is superior to you in
amateur radio. If you find that to be a problem, you'd better get used
to it.
> All discussion is pointless. It's all a trash can
> of insults on the persons holding no-code-test advocacy.

That's a sweeping generalization, Leonard. Most of that stuff is
reserved for you alone. You grate on folks.

Dave K8MN

Not at all, Lennie...Just feeding YOUR hipocracy back to you.

YOU are the one who likes to take threads in wild and serpentine rants,
then when you get cornered, claim that this forum is about RADIO POLICY, taking
the role of the "moderator" you claim this newsgroup doesn't have.

Of course you ALWAYS drop the AMATEUR part of it.

So...break out the salt and pepper...a bit of garlic or sage if you
prefer, and dig in.

>>I am sure he can cut-and-paste as well as you do, Lennie, however
>>I bet Jim's far more competent and knowledgeable in "space business"

> alphabet soup agencies.

Getting checks from any of the aforementioned employers no more means you
were in the "space business" than my having been in the nursing profession
means I slept with Florence Nightengale.

The janitors, the housekeepers, the security guys and the yardsmen all got
W-2's from those companies. I guess we can claim THEY were "in the space
business".

> No "cut and paste" in any of that, sonny. I've laid hands on an
> SSME on a test stand and been through a Shuttle being
> assembled...held many an unmanned spacecraft electronics
> package being assembled and tested in a clean room...(SNIP)

First of all, I am not your son, Lennie. All the testosterone you could
accumulate in a lifetime wouldn't even begin to fill my father's shoes.

I am sure you DID "lay (your) hands" on all that hardware, Lennie...

...when no one was looking and you were sure you'd not be seen. Kinda
like the guy in the crowded bar who "accidentally" cops a feel of the
waitress...Just to see if he can get away with it.

>.....not to
> mention meeting the first shuttle astronauts John Young and
> Bob Crippen.

And by the way...I've met Senator John Glenn and Alan Sheppard at different aviation events...does that mean I get my picture up on a wall at NASA now too...??? Of course THEY flew two programs BEFORE the Shuttle...Oh my!

> So, what does "Jim" do? He won't say anything more than he
> "works in vehicular transportation" according to an ECFS
> comment on the FCC website.

What does it matter? How does it pertain to AMATEUR RADIO POLICY...???

> So, what does the Avenging Angle do? NOTHING in the "space
> business," never has. At best he exaggerates his "engineering"
> job as a Purchasing Agent for a set-top box maker! Lasted less
> than a half year. Tsk.

Sorry, Lennie...your "facts" STILL aren't facts! And I NEVER claimed ANY "engineering" job anywhere.

My ONLY "claim" while I worked in Georgia was to have had access to materials that proved your on-going rants were inaccurate. References were cited. Sorry it hurt so bad. Didn't need a BSEE to bust your bubbles.

>>> He knew all about USSR military aircraft too, even though he
>>> didn't shoot any Bears for naval intelligence (another non-
>>> serviceman did that).
>>
>>He sure does...And funny you should mention that since it was YOU

> when making casual mentions of things among these aerospace
> gurus of self-defined "experience."

Your "obligation" ended in 1960.

Your tour in Japan ended in 1956.

You were never any closer to any Russian "bear" than visits to the zoo.

And I LOVE your "excuse" for your "slipups"...! ! ! You actually try to pass off the fact that by having HAD your alleged experience, you could be expected to screw up! WhoooooHoooo!

>>> an electronics industry but won't say which one, but he can do
>>> morse code at high rate...which makes him far superior as a
>>> 2004 radio person.
>>
>>When matched against an UNlicensed ex-radio technician
>>wannabe...Sure!
>

> Tsk. There you go talking trash again. You can't stop, can you?

It's not trash if it's true, Lennie, and so far you've not provided
anything that invalidates my assertions.

You ARE an ex-technician.

You do NOT have any practical experience in radio operation outside of a
laboratory (other than CB radio and some hokey story of using the ship-to-shore
radio on a friend's yacht).

You do NOT have a valid Amateur Radio operator or station license. FCC
records do verify your claim of holding a GROL, however that very same license
stipulates >>right on the back<< that you may NOT operate ANY radio
transmitter that does not have a valid FCC station license or STA.

SO...That leaves you with 40 channels on 27Mhz (a few extra if ya wanna
count the R/C channels), 5 channels at 151/156Mhz, 14 channels at 462/467Mhz,
and whatever you can eek out with the parameters that Part 15 allows you.

Whew...>>I'm<< impressed...

> You are one sick little puppy, always always mean-mouthing the
> person (and relations) of anyone disagreeing with you.

So far with very few exceptions, I've not been proven wrong. And not at
all by you.

>>> calls night college classes something derogatory, implying they

I guess that explains YOUR unwillingness to seek the help.

> Tsk. The Avenging Angle has claimed all he has to do is pick up
> a telephone and "have authorities commit another" just because
> you have an LPN whatsis. So far you haven't done that, not with
> me, not with Brian Burke. Because you DON'T have any such
> authoritiy as a nurse. You CANNOT do it, yet you keep on saying
> so. That's nuts.

No, >>I<< don't keep saying so.

YOU keep saying so.

And deny what you will. I've proved you wrong before, and it will continue
to happen as long as you keep making stupid assertions in the face of facts to
the contrary.

>>> And my wife gets
>>> a personal insult because she is married to me, all courtesy of
>>> that medically-discharged veteran of "seven hostile actions."
>>> Late in the year this "healthcare professional" told me to go have
>>> a stroke.
>>
>>No..I said PLEASE go have a stroke.
>
> Oh, my, that makes it "all right," does it?

Sure it does.

You've made several very vile and disgusting "suggestions" tempered with
an "emoticon" that's supposed to make it "humourous".

> PLEASE cite the where and when of your "seven hostile actions,"
> mighty warrior (of fantasyland).

> PLEASE cite the government regulation that establishes "MARS
> >>IS<< amateur radio!"
>
> You can't do any of those things, can you?

Whelp, Lennie...I explained my comments vis-a-vis MARS on several
occassions, and you ignored that. I refuse to discuss when and where I was
with the Armed Forces for other reasons that are none of your business....

But I DO love seeing you get torqued because you can't have your way!

> That's because they are NOT related to this newsgroup general
> subject matter. You think that the whole of this newsgroup is to
> give you some open forum to insult and demean anyone who
> doesn't agree with your fantastic opinions. You are the sicko.

It doesn't matter what they are "related to", Lennie.

It only matters that by NOT discussing them when you are demanding that I
do that makes it fun!

>>Lessee...Dave Heil spent a life career in the State Department and
>>YOU didn't...Dave was actually AT those places we only read about or
>>watched on TV.
>
> We are all still waiting for the cite of the Avenging Angle's mighty
> "seven hostile actions" he claims he had.

We were discussing Dave Heil's tours of duty in the State Department...Not
where >>I<< have been...

Poor redirect on your part...Not even enough to make ya blink!

>>And Lennie was...In Japan at a rear-area radio relay
>>station for a couple of years in the 50's...
>
> Three years, sicko. Three.

Two...three...five...doesn't matter. You STILL weren't in Japan when the Tu-95 went into service for the Soviet Union in the Pacific theater.

> Before your existance on earth, grasshopper. Powerful HF
> transmitters...3 1/2 dozen of them...13 microwave radio relay
> terminals, each carrying 24 voice channels. [just to name a
> few things] Nothing carrying any on-off morse mode traffic.

Grasshopper?

Nope...Have flown a Weedhopper, though...Not heavy enough on the controls for me...

And not a one of those "3 1/2 dozen" transmitters were built by you or owned by you. You were one person in an Army detachment that provided radio mechanic services for those transmitters.

Your poximity to those transmitters no more made you qualified as a "radio operator" than my association with rotary winged aircraft in the Marines made me a helo pilot.

> You haven't done a thing in military radio comparable to that.

No, thank God...Bored to death in one spot for three years...Are you nuts? Wait...that was a rhetorical question...you ARE nuts. My bad.

> Poor baby. Feel left out, do you? Can't blame you for getting
> angry...someone comes along who has done MORE than you
> beginning BEFORE your time and it spoils the heck out of your
> bragging and fantasy claims.

Naaaaaah.....I did things and got to go places in the Marines that all of the radio transmitters in the Army couldn't stack up to! I went to WESTPAC not once, but four times. Got to play with radios, Amateur and military in-and-out of theater. Made HF phone patches while airmobile and actually got to meet many of the Japanese and Filippino hams I had met on the air.

Also got to meet hams in several Central and South American countires. Got a "bennie ride" in the back seat of an F4-J out of Pax River to the Nimitiz. Also got several backseat rides in OV-10's and crewed CH53A and D Sea Stallions. Taught ECM/DECM.

So, Lennie...You go RIGHT AHEAD and try to convince me and this NG how disappointed I was that I didn't spend MY military career parked in one place!

And to top it off, I got to carry my Ham gear to many of those places I went to...So I guess it IS possible to have your cake and eat it too!

>>> Never mind that national issues on economics
>>> or politics don't have much effect on radio regulations or ham
>>radio.

>>
>>Absolutely, without contradiction, one of the most assinine
>>assertions you've ever made, Lennie.
>>
>>Economics has been one of the MAJOR driving factors behind
>>numerous impacts on the Amateur Service!
>
> Someone has "impacted" you and it sounds like damage to your
> thinking apparatus. Poor sicko.
>
> More tsk. "MAJOR impact?"
>
> Amateur radio is a radio activity engaged in WITHOUT pecuniary
> interest! [that's an old FCC definition of "amateur radio" and
> explains the use of the word "amateur" in the service title]
>
> Sunnuvagun!

Hmmmmmmm....You're right...Amateur Radio IS a radio activity without
"pecuniary interest"...

However recent industry movements such as BPL, the UPS 220mhz escapade,
Wi_fi, etc etc etc DO "impact" Amateur Radio.

Those industries are making their move for ECONOMIC reasons...So, again, I
was right, Lennie..ECONOMICS makes an impact on Amateur Radio, whether it's my
money or theirs.

> Another avowed PCTA and super morseman claims he can
> make a "Type 7" radio for just $100 and "recycled parts."
> Doesn't sound like some kind of "MAJOR impact" to the nation,
> more like a personal decision on his part.

And the decisions the FCC makes over BPL >>>WILL<<< impact Amateur Radio.

>>On the otherhand, we have you, an ex-Army radio meachanic claiming
>>to have handled over "2.1 million" bits of traffic until the
>>mathematics of your silly claim were laid bare.
>>
>>Then you tried to dance around it.
>
> Tsk. Was NOT a "radio meachanic" nor even a "mechanic."

I was being as complimentary as possible. You WERE a radio mechanic.

> E-5, Microwave Radio Relay Operations and Maintenance
> Supervisor, MOS 281.6 under the old MOS numbering system.
> Also doing Fixed Station Transmitters Operations and
> Maintenance Supervision prior to arrival of the microwave radio
> relay systems.

Uh huh...Radio mechanic.

And "...doing Fixed Station Transmitters Operations and Maintenence
Supervision prior to the arrival of the microwave radio realy systems"...?!?!

THAT sounds to me like "REAL 'supervisors' realized what a self-promoting
putz I was and stuffed me somewhere that I could be watched and do little
damage".

>Army station ADA...(SNIPPED)

Usual puffery deleted. Same pitiful effort to embellish your miserably
lame "radio operating" portfolio. Nothing new.

>>And let's not forget how glorious YOUR Army career was simply by
>>having been in a unit that had suffered KIA's three years before you
>>were ever there.
>
> Tsk. You are still one SICK puppy.

Nope.

I never once even REMOTELY suggested that MY associations with Marines who
were combat veterans or KIA somehow reflected on me in such a way as to have
been my contributions or sacrifices.

YOU did.

> The 8235th Army Unit, a Signal Battalion...(SNIP)

Yeahyeah....same stuff.

> I still honor those Signalmen who lost their lives...

You honor no one except Leonard H. Anderson.

If you honored those men, you'd spin out a new thread apologizing for
having used their sacrifices to YOUR betterment without reservation or
diversion.

> You don't like that I honor the men of my Army unit. Tsk.

I'd be tickled to death if I thought you did. You don't. You have, on
more than one occassion, been caught trying to use someone else's sacrifices to
YOUR benefit.

That's NOT "honoring" them.

> Go and report me to Hal and Ted Barker of the Korean War Project.
> Go and report me to the Secretary of the Army...or even the
> Secretary of Homeland Security (whoever that might be now).
> Go and report me to "authorities" and "have me committed" as
> you claim you can do with your nursing title, all in a single
> telephone call.

Lennie, You were never in the Korean War.

You were never more than a rear area radio mechanic. You were never much
more than that in your "professional" career.

You NEED to be commited. Your outbursts, your deceit, your
misrepresentations and your obsessive-compulsive conduct all spell "sick".

> Better yet, have yourself committed and save all that insulting
> personal trash tossing you seem to do constantly with anyone
> who disagrees with you.

It ain't trash if it's true, Lennie. And so far we've not seen anything
from you to prove otherwise.

It's 2005...You're still not a licensed Amateur Radio operator but you're
still antagonising people who are. More proof of who the "sick" one is.

Putz.

Steve, K4YZ

"THE HINDU India's National Newspaper
Thursday, Dec 30, 2004
Hams lend a helping hand.
Amateur ham radio enthusiasts are playing an unusual but important role in tsunami relief work, reports SHONALI MUTHALALY
When four amateur radio operators headed to the Andaman and Nicobar islands a few weeks ago, armed with only basic equipment, backpacks and sun blocks, they had no idea that their fun hobby would soon become the islands' only lifeline.
"They went because it's a `high value' country for hams (amateur radio operators) since you need special permission from the Government to operate there," says Gopal Madhavan, an avid ham and one of the members of the governing council of the Amateur Radio Society of India. "The last time a ham operated in the Andamans was about 25 years ago."
The team, which came from across India, left Chennai on December 3 on their `DXpedition' (basically ham slang for an expedition to any foreign country). "They met here for a cup of tea before they left... There was a great amount of enthusiasm," says Gopal, carefully tuning his buzzing radio, alive with their voices crackling all the way from the islands.
"They went to Port Blair, set up the equipment ï¿½ all DXpeditions carry radios and dismantled antennas, which can be set up later with guy ropes ï¿½ and contacted about 35,000 hams across the world."
Then, the earthquake began, followed by tidal waves, which swept over the small islands.
"They were actually in operation when the tremors began. Bharthi, the team leader, was talking to an Australian on the radio. He says her voice suddenly rose by a few octaves and she yelled `tremor'. Then, her radio went dead."
The islands were devastated by the quake and crashing waves. Phones died, the electricity went out and life in Andaman and Nicobar came to a stunned halt. On the airwaves too, there was a loud silence, as hams across the world held their breath, wondering whether the team had survived. However, about two hours later, unbelievably, they were back on the air.
"Every other form of communication was down. They were the only link from the Andamans to the mainland for several hours after the disaster," says Gopal, adding that the tsunamis had engulfed the island, paralysing all machinery and communication systems. The ham radio however, which was operating from a tower, was in working order, although the team did have to scavenge for batteries to get it operating again since it had been running on electricity.
In the tradition of hams, the team stayed on to help, the DXpedition was converted into an emergency network and hams from across the world, especially India, swung into action. Two more people headed to the

islands to support the emergency network, and with help from the Indian Army, which is providing the hams with food, camping and batteries, the station on Port Blair continues to operate, while another station has been set up at Car Nicobar, which has been practically obliterated by the catastrophe."

>

Anyone is entitled to their opinion, and I deny no one that. However, in
general, one cannot expect to express things without discourse on them. So,
if you are taking offense that I would seek clarification for what you are
saying, then to add or disagree with it--then you're offense is duly noted.

> >
> > Because, in the United States
>
> Is Kim going to tell ---me--- about America???
>
```

> Please allow me to assume the position.
>

You really do seem rather argumentative. And, in my opinion (may Kim tell you about Kim, even?) to assume an argumentative (if not rather childish) position (or, perhaps that is not what you meant by "position") leads me to believe that this reply-post is an exercise in futility.

> >

> > without having paid attention to this thread, seems to say that
> anyone who
> > doesn't meet your standards of service should just roll up and die?
>
> If you like you can read it that way.
>

Well, I don't "like" to think that anyone would believe like that. There are those who serve their nation through military means, there are those that support them in any and every way they can; there are those who remain here at home and help their families; there are those who go to their jobs every day to keep the inner-workings (and the reason for living in such a wonderful country, by the way) moving; there are those who serve their nation politically; and,

then, there are those who sponge off any opportunity, until it all dries up. For anyone to have a scholarship in this country, they had to meet criteria--set forth by the governing body of that scholarship. For anyone to have availed themselves of any oppportunity to get as top-notch an education, or as top-notch an opportunity, as they could possibly get is for them to have participated in their own destiny, rather than letting things just happen to them. I don't think you're capable of understanding where it is I would go with this...so I'll not bother.

>

> even a split fingernail,
>

You know what? Screw your ever-loving split fingernail theory. You are one of those who seem (and note I've said "seem") to be of the opinion that only those who have served in the United States military are entitled to all the benefits of HAVING BEEN BORN in the USA. You see? That's all it takes for entitlement here: being born in the USA, or becoming a US citizen (although,

and here's a drift to another thread for you--if you can handle it: there are those who are NOT from this country who come over here with their little weenie green cards, suck up what they can from the United States, send it back home, and then go back home themselves...or go on to becoming a US citizen but are pretty darned slinky folks...in my opinion).

> all the while putting down Len Anderson who
> has contributed more to America than a single Jim/N2EY fingernail.
> Kim, you did ask.
>
> bb
>

Uh huh. I did ask. And, you came back with this argument initially that--paraphrasing--were you not entitled to your opinion. You are entitled. You are entitled to believe that the ground a military person walks on is sacred and that no one else is "entitled" to the same benefits from the United States as a person who has served in the military. You are entitled to believe that we don't all, in some form or other, contribute to the integrity, continuance, and strength of the United States--some of us by just damned getting up out of bed every morning and going to some dorky job where a damned good portion of our income goes to supporting the military, and the government, and the "other" people (you know...those who are not worthy)...

So, yeah. I asked. And, I should have known better...

Sorry, Jim, an HT doesn't count as "real ham radio" equipment
to some of these folk in here (remember tRoll and his "shack on
a belt" phrase?). I know of the ease at which modern VHF and
UHF repeaters can access the telephone system. Lots of the
staid, olde-tyme raddio morsemen can't think of anything but the
old telephone coupler/"patch" gadget for linking Rx/Tx with a phone.

>Seriously, when I was on Guam, a phone call to the states was $12.00 (in
>1968) for the first 3 minutes and 4 bucks a minute thereafter. The hamshack
>worked just fine.

Agreed. But, this isn't 1968 anymore...sad to say, 1968 was 26 years
ago and most college grads of the Class of 2004 weren't even born
yet. :-)

>As you point out, the cellphones have replaced ham radio.

Not quite. Few "civilians" (those not even concerned with amateur radio or not knowing anything about it) have (almost literally) embraced cellular telephony since the 1970s. Very few of those non-amateurs ever thought about "ham radio" as anything for emergencies, let alone casual, personal communications. But, as of 2003 the Census Bureau of the USA said that one in three Americans have cell phone subscriptions. It isn't "replacement," it is "embracement" or "displacement."

Just from store sales and observation of ordinary people in markets or on sidewalks, in cars in motion, it should be obvious that there are at least a 100 MILLION of those little two-way radios interfaced with the telephone infrastructure.

>What did that sergent run up on his cell phone calling back home from Iraq?
>Was it $1,700 or $17,000? But, of course, this is very good as it is
>making a lot of money for the "right" folks LOL.

Tsk. The INTERNET and the DSN interconnection are more a fact of life in the U.S. military everywhere now. That E-5 in Iraq probably didn't use any cell phone to call home but rather used a computer (personal laptop or government issue) and did e-mail.

DSN is good for direct voice communications (with the right permission) since it handles both voice and data and is an integral part of military land communications from Corps and higher. Given access to a DSN, I can call direct to a Special Services hotel at or near the Hardy Barracks (on-base is military, off-base is civilian) for reservations or whatever. That's just an example; the rest of Tokyo is way too expensive. :-) The DSN "directory" is fairly big now, has been growing for at least six years.

>I believe there is a repeater in Iraq and can and has been used, but I'm not
>too sure about 3rd party agreements and stuff and absolutely don't want to
>run afoul of certain government agencies (of which the FCC wouldn't even
>make a blip on my list of which agencies and how much concern LOL).

No real need for "repeaters" there. The DSN can handle what is needed, no sweat. If there's any prohibitions about use, that's a security concern having nothing to do with international or national regulations.

Look back on news video from Iraq of the past two years and you will see LOTS and LOTS of computers being used, both for direct military communications and for personnel-pleasure comms. The PC has become a standard communications AND publications tool (displacing a need for all those paper-bound military documents in small units...a great convenience for them). The last remaining center for morse code cognition in the USA for military and government personnel, at Fort Huachuca, uses computer terminals with three commercial morse training

programs (forgot to note the names as used in 2002). Signal
School at Fort Gordon, GA, has some fair general-use audio-
visual computer programs (interactive, can be used off-line) for
the major land forces radios and the "plugger" (AN/PSN-11
GPS receiver operational since at least 1990). There are two
available training programs for the common-use SINCGARS, one
of them originated by the USMC.

What I'm leading to is the VoIP, Voice over Internet Protocol,
is being standardized in the industry right now (it exists already
but not with a common standard). Once that gets going, voice
communication costs will drop for long distances for individuals,
no more than today's Internet subscribership.

>I guess what sometimes is disappointing is the extreme views - either that
>amateur radio is the answer to everything and that amateur radio is the
>answer to nothing and is antiquated. Neither view is correct, in my humble
>opinion.

Extremes are hardly ever correct. One problem with radio amateurs
getting all their communications knowledge from amateur radio
publications is that they fall into an extreme category, blinded a bit
by the ham pubs very much biased in favor of ham methods.

There is a fantastic resource of communications other than amateur
radio in the United States. Cell phones top the list for the simple
reason that there are millions of them and they are almost as simple
to use as an ordinary wired phone. "Long-distance" service, clear as
any local call, is a given nowadays and we can all look at near-instant
video (with audio) from faraway places on the globe (geostationary
orbit "parking places" for comm sats is now filled, has been for a
couple years). The guy who first explained a viable communications
satellite system (science-fiction novelist Arthur C. Clarke) is still
alive and living in Sri Lanka. Time marches on and the radio world
has not been stuck in the standards and practices of the 1930s.

There's really NO place for radiotelegraphy in the bigger world of
communications today...except as a fun thing to do for those who
like to do it in amateur radio.

>Meanwhile, I'm getting ready for New Year's eve. Nope, not going anywhere.
>Too many drunks will be on the road.
>
>Have a safe and happy New Year!

Thank you and you too...so far, so good, at least to day 2 of 2005. :-)

Sure....

In any event "broadcasting" a program over radio is way less
efficient compared to posting that program's material
on a web page. A web site is always available, and can
be accessed world wide. And it doesn't clog the radio
spectrum that was allocated for 2 way comms.

Hello, Bob

Too obvious a solution for some. Then again, some folks may think that
others simply enjoy hearing their voice ;)

Perhaps a rule should be made. Anyone broadcasting stuff for amateurs (such
as the ARRL) can only broadcast it in Morse. That would cut the bandwidth
;)

Best regards from Rochester, NY

The problem is that I can't define a "real ham". Perhaps you can?

There are folks running moonbounce - and it would take me a bit of studying to get to their level - not so much on the electronics, but the rotation of the earth and motion of the moon in its' orbit.

There are others that deal in pretty high frequencies. Seems I remember a couple of guys doing moonbounce on 24 GHz. Not a simple problem.

There is some truth buried in most posts, but it gets hidden by our own standards of belief - along with the usual flames.

I've had some interesting conversations off group with a number of folks that get involved with flames. For the most part, they simply deal back what they were dealt. I think it might be better if we found common ground, rather than point out differences.

I agree. I also have a memory when in the 60s the ARRL pushed incentive licensing. That ARRL/FCC BS cost me some frequency spectrum usage on 80 through 15 meters that I previously had worked hard to obtain by getting my ham license. In my opinion they always have been a bunch of self centered individuals who had an agenda. I have been licensed for 45 years. Fortunately I wised up about the ARRL 44 1/2 years ago.

Hello, Jerry

Um ... not a big deal .. with a look up of over 9,000 - might we gently
assume it is someone associated with the FCC that also happens to have an
amateur license?

<VBG>

Jerry, please be advised (and I think you don't need the advisement) that
many folks on the rec.radio.amateur.policy group as well as rec.radio.cb
group are not exactly the sharpest knives in the drawer .... :))

Best regards from Rochester, NY

If you're in the 28% bracket, that means that your income is over $70k (for a single person, more for married) and that further means that you're not a "cheap" enough person to be volunteering in this hobby! :-)

Hello, "Bill"

I don't know where your located but the program will probably be during the evening hours around 9.00 to 9.30 PM CST. We will have both National and International Amateur Radio Information as well as local Amateur Information like nets ect, ect.

Todd N9OGL

I'm not responsible for that. AOL is responsible since they had
messed up the bits on my account. AOL was notified and they
cleared up things but apparently resent old posts waiting to go.

I just send them. If you no like them, hit the ENTER key and go

>
>* We purposely operate using as little power as possible (QRP), they don't

Heh heh heh. Crock of something. All one has to do is listen to the HF bands during contests and observe the S-Meter readings.

Tsk. The military has built-in "QRP" (equivalent) controls to HF through UHF transceivers and has done so since at least 1989.

>* We have antenna measuring contests with home-built antennas, they don't

Most other radio services use already-measured antennas with professional installations plus more measurements after installations. No "contests" needed. :-)

>* We conduct emergency comms when other services are down, they're down

Another crock. Tsk. You should see some of the urban emergency services' communications facilities, their training plans, listen to their on-air exercises and drills.

Better yet, live through a real, live emergency and see how the entire network can operate with "work-arounds." Case in point: The 1994 Northridge Earthquake in Los Angeles where all the public safety and utility companies' were "netted" together to keep things going. The only thing "down" was buildings, poles, etc., but the emergency power was there and working...even though the primary AC power to 10 million was cut off for hours.

>* We don't have to operate on pre-assigned frequencies, they do

Tsk. Ham repeaters "operate on pre-assigned frequencies." :-)

>* We have on-the-air contests (lots of them), they can't

"They can't?!?" Why should "they?"

>* We can vary our power from 0 to 2KW, they can't

Please, make a QSO with 0 KW RF output. I dare ya. :-)

>* We exchange post cards after a QSO, they don't

Wow! [a big Ben Stein "wow..."]

Post cards from the edge? :-)

I know of no non-amateur radio licensee who has a "QSL Buro."

>* We're frequency-agile with a VFO, they aren't

Not all of you. A few of you "own" a frequency. :-)

>* We have swapmeets ("ham fests"), they don't

Non-ham licensees have NO NEED of "ham fests." :-)

>* We can build our own equipment, they can't

Untrue, even in broadcasting service. Get details on studio
electronics in broadcasting sometime.

The major reason that there's so little "homebuilding" with other
(non-ham) radio services is CO$T. Cheaper to buy ready-made
than to homebrew.

>* We operate for the fun of it, they don't

First thing you've written that is close to the truth...

>* We have radio club meetings, they don't

WRONG. The very first radio club is the Radio Club of America,
incorporated 1909 (five years before the ARRL and before every
other local/national radio club here). RCA is still alive and meeting
but they've gone away from amateurism. They have a website with
lots of informative, historical data there.

>* We can ragchew for hours, they can't

You don't listen to "Talk Radio" do you? :-)

Tsk. Almost every radio service (other than broadcasting) has a
form of "ragchewing," including the military.

>* We can operate at will, they can't

As long as you don't operate ON Will, it's okay...unless you are
an MD. You can operate WITH a Will if you are an attorney. :-)

>* We go on DXpeditions, they don't

Cook and Magellan had amateur radio licenses? Columbus?
Vasco de Gama?

Hams "discover" the undiscovered country? I don't think so.

>* We're licensed, you're not

WRONG! I have several licenses. :-)

I just don't have an amateur radio license.

I could show you my poetic license ability but then I'd have to
bill you for services. :-)

>No 73 for you, Jeff KH6O

Tsk. No "best regards?" Not even an "88?" :-)

Lecture on those numbers, sweetums. Close your classroom door
on the way out. Bye....

>will ever admit to it ;-)

Tsk. The "massager" (of raw license data) is ALWAYS correct and
ALWAYS the judge of what is "right" and what is "wrong." :-)

So...there's a dispute with the U.S. Census Bureau on the number
of cell phone subscribers in the USA? [about 100 million]

Tsk. Naturally our regular is more correct than the lawful, official
source of population data in the USA. All others disagreeing with
him are "just plain wrong."

>And that's a plain, simple fact. Doesn't mean ham radio plays no role at all,
>just that in many places and situations, a cell phone will make a 911 call
>that used to be made by a ham with a handheld.

So...a "ham with a handheld" was the previous source of "911 calls?"

That's strange because the "911" emergency number is intended to
be used solely with the telephone infrastructure. There's no (and
never was) any provision in the U.S. amateur radio regulations to
tie "911" (or even an equivalent) into any Public Safety

communications.

Those who are able to contact "911" through amateur radio repeaters
can do so solely because the repeater controller has added such
features to the repeater. Not all repeaters are so equipped every
place in the country.

>Agreed! But a lot of that isn't about the mountains - it's about the customer
>density and how fast they are building up the cell networks.

Four years ago my wife and I drove back to the midwest. We had
not done so (together or separately) since more than ten years
past. The number of quite obvious Cell Sites seen just from the
highway were astounding in comparison to the past decade.

Here's a "plain simple fact:" The U.S. Census Bureau reported that
the number of cellular telephone subscribers in the USA amounted
to one in three citizens two years ago. At approximately 300 million
population, that is 100 million subscribers. [at least one cell phone
for each subscriber... :-)]

Denial that the cellular telephone system is BIG doesn't say much
for your credibility. It is FAR bigger than the number of U.S. hams
with handheld transceivers.

>Remember when the shuttle burned up on reentry, and volunteers went out in
>search of shuttle pieces? Turned out that ham radio was better suited to the
>search parties' comm needs than cell phones were.

Tsk, tsk. Sinning by omission.

Here's a plain, simple fact: The shuttle's re-entry debris "footprint"
was nearly a thousand miles long, mostly over the sunbelt area of
the USA.

The MAJORITY of debris recovery groups were or were under the
guidance of government personnel. [as it should be considering
the STS is a government project]

The ARRL (who regularly slants "news" highly in favor of amateurs)
did not point out that a FEW areas used radio amateurs for help
in locating shuttle debris. [go argue with NASA if there is
personal disagreement with that statement]

THOUSANDS of non-radio-amateur citizens helped in searching
for shuttle re-entry debris. Quite a few more than hams. You do
a disservice to those citizens by not acknowledging their voluntary
contributions of time and effort.

Yes, SOME radio amateurs did help in the shuttle debris recovery
effort. Agreed. However, to say that "amateur radio was better
suited" to that is a dumb thing to say considering the higher number
of already-available, already-proven capability of government and
public safety agency handheld transceivers used every day.

Heh heh...the "common ground" is usually just capitulation to those
which could use the Latin phrase "Primus Inter Pares" as their motto.
["First Among Equals"] :-)

As to license numbers, the regular poster of those uses massaged
data as if the massaging, whether by hisself or others, is somehow
"truth in numbers." Not quite. The raw data is available from the
FCC...if anyone has high-speed interconnection to the 'net to get
their massive files. Several sites provide such raw data, such as
www.hamdata.com. Those numbers don't agree with what the
regular poster posts. Raw data numbers are usually higher than
the massaged numbers. [for self-agitprop purposes, it would be
logical to use the higher number rather than lower]

The rationalizations for using "massaged" data have been and no
doubt will continue to be great. :-)

Tsk. Ham repeaters "operate on pre-assigned frequencies." :-)

Radio amateurs are obliged BY LAW to stay WITHIN their allocated bands. See Part 97, Title 47 C.F.R.

>* We have on-the-air contests (lots of them), they can't

"They can't?!?" Why should "they?"

Broadcasters have "sweeps" periods...which have more at
stake than winning fancy certificates.

>* We can vary our power from 0 to 2KW, they can't

Please, make a QSO with 0 KW RF output. I dare ya. :-)

[Yes, I've heard that "CW gets through when nothing else will"
but ham transmitters need SOME kind of electric power... :-)]

>* We exchange post cards after a QSO, they don't

Wow! [a big Ben Stein "wow..."]

Post cards from the edge? :-)

I know of no non-amateur radio organization who has a "QSL Buro."

>* We're frequency-agile with a VFO, they aren't

Not all of you. A few of you "own" a frequency. :-)

International Civil Aviation regulations (also FAA) allow aircraft to
change any communications frequency they need over the
entire civil aviation band.

Several HF-using radio services are allowed to change frequencies
as needed to continue communications. See ALE (Automatic
Link Establishment) as done by government agencies...or the
maritime radio services on HF or on VHF in harbor and inland
waterways. [just a few examples]

>* We have swapmeets ("ham fests"), they don't

Non-ham licensees have NO NEED of "ham fests." :-)

Tsk. Almost every radio service (other than broadcasting) has a form of "ragchewing," including the military.

>* We can operate at will, they can't

As long as you don't operate ON Will, it's okay...unless you are an MD. You can operate WITH a Will if you are an attorney. :-)

>* We go on DXpeditions, they don't

Cook and Magellan had amateur radio licenses? Columbus? Vasco de Gama?

Hams "discover" the undiscovered country? I don't think so.

>* We're licensed, you're not

WRONG! I have several licenses. :-)

I just don't have an amateur radio license.

I could show you my poetic license ability but then I'd have to bill you for services. :-)

>No 73 for you, Jeff KH6O

Tsk. No "best regards?" Not even an "88?" :-)

Lecture on those numbers, sweetums. Close your classroom door on the way out. Bye....

>
>Since you opened the door, let's do some further comparisons of the ARS to
>other services:

HEY! You left the door open again! Can't you get it right?

NONE of your itmes in this artificial "comparison" can justify
the continuation of the morse code test for U.S. amateur radio
licenses.

It seems you are bereft from any actual exposure to anything
but amateur radio and past USCG experience.

>* We purposely operate using as little power as possible (QRP), they don't

That's a SUPPOSITION which isn't borne out by actual practice.

A fairly standard RF power output for HF hams is about 100
Watts (CW), courtesy of ready-manufactured (offshore) HF
transceivers. VHF-UHF handhelds run about 5 W RF out.

Power outputs vary, of course, but the average HF rig output
is in the neighborhood of 100 Watts.

It's fair to say that some contesters run "a bit more" than two
KiloWatts. That's an under-the-table subject, not ever to be
mentioned in public because of the anal-retentive shouting and
hollering done at the evil, despicable CB crowd, all of whom
are said to be operating "illegally." It's supposed to be some
kind of "virtue" that all (hardly any exceptions) U.S. radio amateurs
are "law-abiding" God-fearing Republican-leaning true blue boy scout
types...at least all those who admit they are law-abiding, God-
fearing, Republican-leaning, true-blue Amurrican hams. :-)

Broadcasters can't run more than 50 KW into their antennas, by
regulations (ERP through antenna pattern shaping does not signify
power INTO any antenna). They are allowed that becasue their
signal may be heard by millions of listeners at the same time.

Private and commercial small boat owners will use less than 50 W
on VHF and, if they go into deep waters, tend towards the 20 W
PEP SSB transceivers on HF.

PLMRS vehicle transmitters seldom reach 50 W output on VHF
to UHF, are usually lower than 25 W. That includes public
safety radio services (that's police, fire, etc.), utility companies,
tramsportation (delivery trucks, big rigs), railroad radio (more
extensive in the continental USA than in Hawaii) and all the small
businesses using radio. The same is true for civil aviation on
VHF, and very few aviation HF transmitters reach 100 W.

Cellular telephone handsets seldom go above 4 W peak RF
output. There are a mere 100+ MILLION of those operating on
the bottom of L-Band (1 GHz, give or take). [there were at least
100 million cell phone subscribers two years ago according to the
U.S. Census Bureau and each subscriber would have 1 phone at
a very minimum] I could go into the direct satellite HTs but then
I'm going far above the acumen of illustrious amateur morsemen
with their teeny tuna tin two transistor transmitters using 2N2222s..

Personal communications radio service includes the Family Radio
Service transceivers, all of which operate below 5 Watts output
with digital modulation. Those cost less than $100 a pair and
require no license, therefore no test. I don't have any EIA figures
on those, but any graybeard Lecturer could turn that up, couldn't
they? :-)

While not strictly for communications, only telecommand, the
R/C radio service transmitters number in the hundreds of thousands,
are NOT licensed, are enjoyed by hundreds of thousands. Their
RF power outputs rarely exceed 1 Watt.

[CB, never requiring a test since 1958 to operate below 30 MHz, is
purposely left out to avoid causing emotional trauma to anal-
retentive, certificate-loving, "fully authorized by the federal
government" emergency minute-morsemen of the CW persuasion]

So...can YOU make communications worldwide ANY TIME YOU
DESIRE via ham bands. Not really. The ionosphere has yet to
be informed of the truly divine mission of the amateur radio hobbyist,
grandmaster-class radio "expert" who is superior to all professionals.
Not with a pair of 2N2222s connected to a battery.

>* We conduct emergency comms when other services are down, they're down

Tsk. The non-amateur emergency communications are SELDOM
"down." If they couldn't be UP when required, all those government
agencies wouldn't have them.

In January,1994 the Los Angeles area radio amateurs were NOT
there, johnny-on-the-spot after the Northridge Earthquake struck.
The government agencies, medical services, and utilities were
UP and on-the job, drilled and prepared for emergencies, especially

the loss of prinary electrical power to the entire area. Even the supposedly "useless" (to some rabid hamfanatics) telephone infrastructure was operating...with on-line "floating" battery power that they've had since the 1930s.

>* We don't have to operate on pre-assigned frequencies, they do

Oh, dear, that's a "plus?" You had best consult your USCG data on how many HF frequencies are available to USE by anyone in deep water. You ought to look in the cockpit of a general aviation light aircraft and note the number of non-pre-assigned frequencies a pilot can USE at their discretion. [Hint: They are invariably a pair of switch selectors, the left one in MHz increments, the right one in 50 KHz to smaller increments, depending on the model and age. Had you been on the mainland, you could look into an LAPD or NYPD vehicle and see a selector switch for up to six different frequencies...fire departments have similar multiple-frequency selectors.

If everything in radio involves playing with tuning, then I could understand this comparison's validity. As it is, all those NON-amateur radio USERS are NOT using those radios to play with, engage in "radiosport" contests, or generally go for a HOBBY activity.

>* We have on-the-air contests (lots of them), they can't

Currently, Los Angeles area broadcasters have 2 contests in progress. They've had as many as 5 going on at as many stations in the past. I think the California Lottery "Big Spin" program is still running (half-hour, maximum prize about $50 thou or so) once a week...on one of the independent TV stations. The program "Jeopardy" is still running although it isn't live (taped, about 4 to 5 "days" shot in a single day); a software engineer named Ken Jennings recently won $2.5 million in that long-running quiz show. Defiinitely a CONTEST! "Wheel of Fortune" follows that show on ABC-TV, a rather low-brow (for intellectuals) CONTEST involving large sums of money. :-)

>* We have swapmeets ("ham fests"), they don't

Tsk. Another UNTRUTH. Find out what goes on with "Antique Roadshow" sometime. :-) [not strictly 'broadcast' but the cable channel is relayed via microwave radio...:-)]

COMDEX in Las Vegas does have a swapmeet of sorts, involved in the latest consumer electronics products. WESCON, the electronics industry western electronics convention (alternating years between San Francisco and Anaheim locations) is as big as COMDEX and is involved in radio, but seldom with amateur radio.

>* We have radio club meetings, they don't

As one of the "they," I still manage at least one IEEE special seminar event of interest once every two months. The IEEE is kind of small at a mere 250,000 members worldwide and the Los Angeles chapter is only a few thousand. Some of those "meetings" involve voting in addition to presenting information. I'm not counting some of the other professional associations which have regular meetings...some are aligned to the IEEE and some are not...too many for my needs now.

>* We can ragchew for hours, they can't

Yes, you can discuss the whichness of the what, but few radio club meetings go beyond the usual fraternal-order gatherings mainly bossed by local self-styled fraternal movers and shakers who like being in control (at meetings they are SOMEBODY).

But, you've failed to argue a basic point (beyond the terrible need to test for morsemanship for an HF license) in that U.S. amateur radio was never, and isn't much more than a HOBBY radio activity. Amateur radio is NOT primarily any kind of emergency service (never was even if the regs said that the capability is there). It is NOT a broadcaster serving thousands of service area listeners (cannot be one legally, but that's another area of discussion).

You've failed to pick up on K4YZ's exhortations that amateur radio is NOT like any other radio service. By that logic, you have no validity in coming up with this sub-thread.

The ONLY other radio service comparing to amateur radio in the USA is the radio control radio service (see Part 95). Radio controllers don't fantasize they are advancing any state of the vehicle art or that they can "take over when all other vehicles fail." Radio controllers are just hobbyists enjoying what they do, for fun, for recreation. Model aircraft radio controllers have a national organization headquartered in Ohio and their membership totals reach 175,000 or slightly more than the membership of the ARRL. The Academy of Model Aeronautics also has a museum at the HQ plus a large flying field (comparable to the league's museum but includes newer exhibits and the W1AW station but bigger in size). AMA's membership magazine is "MAN," for Model Airplane News. AMA has done their legal lobbying, too, and got all those R/C channels on/around 72 MHz exclusively for radio control purposes. They've gotten more since 1979 than the ARRL achieved in new amateur radio frequency bands. :-)

You've got to change your image to the rest of the world, get some publicity beyond the rather incestuous ham-only audience. Running off with "We've got, you ain't" nyah-nyah-ism looks quite puerile, very childlike. Not a good attitude to present to the public by a "university lecturer," is it? :-)

Do not worry. No space aliens have been spotted. The code test is still there with all sorts of heroic morsemen ready to Save the World through radiotelegraphy when they invade. Hollywood might even make a movie about that!

Please SHUT the door now. Good lad. Here, have a cookie.

As a football star sed when asked about all the restrictions placed on the players

Well you get on with what you have to get on with and win football games

Same applies to all facets of life I suppose.

Just get on with the Morse code and win HF privileges

Doesn't make any difference whether the code is outdated or whatever -- it is the requirement

> through UHF transceivers and has done so since at least 1989.

Not all of them, Lennie.

> >* We have antenna measuring contests with home-built antennas, they
don't
>
> Most other radio services use already-measured antennas with
> professional installations plus more measurements after
> installations. No "contests" needed.

"Other radio services" are not interested in improving antenna
efficiency. Indeed, many antenna systems are installed with the intent
to attenuate radiation in certain patterns!

> >* We conduct emergency comms when other services are down, they're
down
>
> Another crock. Tsk. You should see some of the urban

> emergency services' communications facilities, their training
> plans, listen to their on-air exercises and drills.

And Leonard H. Anderson once again makes a really assinine comment
in the face of contemporary, independently reported fact to the
contrary.

> Better yet, live through a real, live emergency and see how the
> entire network can operate with "work-arounds." Case in point:
> The 1994 Northridge Earthquake in Los Angeles where all the
> public safety and utility companies' were "netted" together to
> keep things going. The only thing "down" was buildings, poles,
> etc., but the emergency power was there and working...even
> though the primary AC power to 10 million was cut off for hours.

Here we have Lennie once again retelling his tale of single-handed
stay-at-home heroism of an event that happend over a decade ago.

Of course it's the ONLY example he has to use.

And the really ironic part is that Lennie's the one who's always
lambasitng us (Amateurs) for "living in the past", etc.

At least it's a bit more "modern" than his tales of Korean War era
heroism in a rear area Army radio relay station is the mid fifties.

> >* We don't have to operate on pre-assigned frequencies, they do
>
> Tsk. Ham repeaters "operate on pre-assigned frequencies."

They are not "assigned", Lennie.

> Radio amateurs are obliged BY LAW to stay WITHIN their
> allocated bands. See Part 97, Title 47 C.F.R.

Uh huh. Bands YOU are not authorized to use, I might add!

> >* We have on-the-air contests (lots of them), they can't
>
> "They can't?!?" Why should "they?"
>
> Broadcasters have "sweeps" periods...which have more at
> stake than winning fancy certificates.
>
> >* We can vary our power from 0 to 2KW, they can't
>
> Please, make a QSO with 0 KW RF output. I dare ya.

Almost close to a funny, Lennie!

> [Yes, I've heard that "CW gets through when nothing else will"
> but ham transmitters need SOME kind of electric power...]
>
> >* We exchange post cards after a QSO, they don't

>

> I know of no non-amateur radio organization who has a "QSL Buro."
>
> >* We're frequency-agile with a VFO, they aren't
>
> Not all of you. A few of you "own" a frequency.

Uhhhhhh....None of us "own" a frequency.

Not even GROL licensed ex-technicians with no station license.

> International Civil Aviation regulations (also FAA) allow aircraft
to
> change any communications frequency they need over the
> entire civil aviation band.

Those ARE assigned frequencies. And they may NOT change to ANY
frequency over the ENTIRE civil aviation band, Lennie.

> Several HF-using radio services are allowed to change frequencies
> as needed to continue communications. See ALE (Automatic
> Link Establishment) as done by government agencies...or the
> maritime radio services on HF or on VHF in harbor and inland
> waterways. [just a few examples]

Again...Discreet, assigned frequencies by international
convention.

> >* We have swapmeets ("ham fests"), they don't
>
> Non-ham licensees have NO NEED of "ham fests."
>
> >* We can build our own equipment, they can't
>
> Untrue, even in broadcasting service. Get details on studio
> electronics in broadcasting sometime.

Sorry...broadcast facilities MUST use FCC type accepted gear,
Lennie.

A REAL "radio professional" would know that.

> The major reason that there's so little "homebuilding" with other
> (non-ham) radio services is CO$T. Cheaper to buy ready-made
> than to homebrew.

"Cheaper" than the FCC fine which would accompany the use of
non-type accepted equipment.

> >* We operate for the fun of it, they don't
>
> First thing you've written that is close to the truth...
>
> >* We have radio club meetings, they don't
>
> WRONG. The very first radio club is the Radio Club of America,

> other local/national radio club here). RCA is still alive and
meeting
> but they've gone away from amateurism. They have a website with
> lots of informative, historical data there.

Hmmmmmmmmmmmmmmmm....1909...Pre-dates the ARRL by 6 years...How
does this fit in to your rants about US relying on ARRL, Lennie...???

> >* We can ragchew for hours, they can't
>
> You don't listen to "Talk Radio" do you?

Participants on "talk radio" do it via telephone, not two way
radio.

> Tsk. Almost every radio service (other than broadcasting) has a

>
> >* We can operate at will, they can't
>
> As long as you don't operate ON Will, it's okay...unless you are
> an MD. You can operate WITH a Will if you are an attorney. :-)

It's amazing what you will append with a smiley, Lennie. You're
really impressed with yourself, aren't you...???

> >* We go on DXpeditions, they don't
>
> Cook and Magellan had amateur radio licenses? Columbus?
> Vasco de Gama?

> Hams "discover" the undiscovered country? I don't think so.

Sure they have. And before Leonard H. Anderson was old enough to
stick his banana-peeler into his diaper and wonder why the pudding
tasted so bad.

> >* We're licensed, you're not
>
> WRONG! I have several licenses.
>
> I just don't have an amateur radio license.

That's the first thing YOU have gotten right, Lennie.
>
> I could show you my poetic license ability but then I'd have to

> bill you for services.

If it's over $1.25, you're ripping folks off.

> >No 73 for you, Jeff KH6O
>
> Tsk. No "best regards?" Not even an "88?" :-)
>
> Lecture on those numbers, sweetums. Close your classroom door
> on the way out. Bye....

Be still my heart..could Lennie TRULY be leaving...???
Naaaaaah....No one is THAT lucky!

Sure enough. That a person might make a 911 call using a cell phone is
not the issue. That having cell phones make 911 calls is perhaps the
best use of the things. but it still isn't the issue.

You didn't write "communications anywhere in there. There is also a
world of difference between "911 type reporting" (which is a quote) and
"do the 911 communications", which is what you were quoted as saying.

A person using a cell phone to report a 911 type situation is not
"doing the 911 communications". They are reporting a situation. Same as
if you called using an HT or a phone booth.

This got me 2 wondering, do hams still send those
obsolete ascii-character type nudie pics to
each other via teletype like they used to do
30+ years ago? (or do they just put then up
on web pages now like everyone else...?)

>phones weren't very common, but hams with mobile rigs were.

...must have been in a galaxy far, far away from this one. :-)

Lovely NON-applicable factoid, doesn't explain anything. Of
course there were radio amateurs with mobile radios "not so
many years ago." There still are.

But, there are NO facts presented that those mobile radios
were used in emergencies. If they were, there are NO facts
presented as to any percentage of "emergency operations"
relative to normal amateur radio hobby use.

>>> Here's a "plain simple fact:" I replied to J.P.Miccolis' message
>>> and quoted his EXACT WORDS.
>
>Looks like a misquote on Len's part.

Tsk. J.P. "never said that." ? :-)

Of course he never said that. He WROTE it. :-)

Tsk, tsk. The "911" communications system was never designed
around radio amateurs.

[this is beginning to sound like another wish-fulfillment statement
done in here by another, "Sorry, Hans, MARS >>IS<< amateur
radio!" :-)]

>>Jim wrote:
>>
>>Jim >What *has* happened is that cell phones do much if not most of the

>trying to tell you to stop pointing out his misquote.

Tsk, tsk, tsk, tsk. Ol' George (Orwell) should have been around
to see this parody of "1984." :-)

J.P. denies having said something (or wrote) and Coslo keeps
trying to stick his hockey puck in here, and both are having a
fun time pretending to be honorable and virtuous paragons of
truth, justice, and the ARRL way.

Seems like there SHALL BE NO ARGUMENTS WITH PCTA
EXTRAS!!! Ever. :-)

>>If you don't like my messages, I suggest you do the same.
>

>Sounds like good advice. Of course the author of that one won't take his own
>advice...

Tsk, tsk, tsk, tsk, tsk. J.P. didn't take such advice. :-)

Coslo keeps jumping in on others postings, acting like an immoderate
moderator in an unmoderated forum.

It's a Fantasyland. The "911" emergency call system was NOT
established with or for amateur use, yet the two paragons keep
trying to say it was and that hams DID "911" comms (even though
it did not exist then).

Twilight Zone. Lost in Space. Outer Limits.

Jeff Herman said that hams can do communications with zero power
output.

J.P. implied that ham HTs were the only practical means of comms
among shuttle burn-up debris searching. [all the rest of those
thousands and thousands of government and agency HTs were
apparently inadequate in the Fantasyland]

This is getting to be like Laugh-In but without the humor...

LenAnderson@ieee.org

109. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-04 18:57:16 UTC
From: lenof21@aol.com
Message-ID: <20050104135716.09630.00000345@mb-m20.aol.com>
Source record: 101625

One problem with using "massaged" numbers is that those massagers seldom show their justification for such massaging. As an example, the data from www.hamdata.com for January 1, 2005, and January 1, 2004 is given following, as Hamdata totalled it -

In the left blocks, in one year's time, there have been 12,203 license class changes. Total number of licensed amateurs is not affected by that. For the same period, there were 17,282 new amateurs, but 19,065 are expired and no longer licensed. As far as the overall license totals go, that means a 1,783 DROP in numbers. Not a big thing and might be ascribed to normal attrition rates.

The one thing the regular poster wants to downplay is the number of Technician Class licensees. Those have been continually growing and now make up (within 0.02%) two-fifths of all licensees. That growth rate is, by far, the biggest of all classes, amounting to nearly 10 thousand a year. So much for the alleged "drop due to end of grace period." :-) That allegation turned out to be false.

Class totals can be compared from Hamdata numbers based on January 1 of 2005 growth/decline relative to January 1, 2004:

Technician 289,868 (39.98% of total) (growth of 9,902)
Technician Plus 60,664 (8.37% of total) (decline of 9,326)
Novice 35,894 (4.95% of total) (decline of 4,117)
General 146,668 (20.23% of total) (growth of 846)
Advanced 83,424 (11.51% of total) (decline of 1,566)
Extra 108,537 (14.97% of total) (growth of 1,768)

All excepting
club calls 725,055 (decline of
2,493)

Note: Rounding of percentages to one-hundredths decimals results in 100.01% instead of 100.00%.

All licensees are perfectly legal to continue operating in their grace period. There is no necessity (nor sense) to eliminate those in the grace period from those in the normal 10-year license period from any class totals.

To repeat, the allegation that there is a "big drop" in Technician Class numbers is WRONG. Raw data doesn't show that. Implying that the allegation still exists is merely compounding the wrongness.

To paraphrase McLuhan, the medium is the massage.

Someone is kneading to bake bad bread.

LenAnderson@ieee.org.

Great choice of band.....

Not only is propagation rare at night on ten, it's now
at the bottom of the sunspot cycle which means rare
propagation even in daytime......

One positive thing is that you won't be bothering
anyone beyond a hundred miles around your QTH. ;-)

That's not the transmitter. The transmitter and
antenna is the only part the FCC cares about, from
a technical viewpoint. There's a bunch of other
rules about nontechnical aspects, but nothing that
much cares about studio equipment.

Other services are not likely to build radios when
they can buy what they need from off the shelf approved
equipment. For a lot less money. For them a radio

is a box that does something useful to get something they
want done.

Do you mean me, Len?

You seem to be unable to refer to me by first name or callsign. Why is
that?

> uses massaged data

What do you mean by "massaged data", Len?

The plain, simple fact is that there is a brief, clear explanation of
the numbers I post - each time they are posted. They are the number of
current FCC amateur licenses held by *individuals*.

Which means that club, military, RACES and other station-only licenses
are not included. Also, licenses which are expired but in the grace
period are not included.

Only currently-licensed individual amateurs are listed in the totals I
post.

> as if the massaging, whether by hisself or others, is somehow
> "truth in numbers."

Is there some problem with posting the number of currently-licensed
individual amateurs, and leaving out station-license-only entries? Is

there a problem with leaving out expired-but-in-the-grace-period
licenses?

> Not quite. The raw data is available from the
> FCC...if anyone has high-speed interconnection to the 'net to get
> their massive files.

Have you done that, Len?

> Several sites provide such raw data, such as
> www.hamdata.com. Those numbers don't agree with what the
> regular poster posts.

That's because they include expired and station-only licenses.

I've explained this before, but apparently you don't understand it.

> Raw data numbers are usually higher than
> the massaged numbers. [for self-agitprop purposes, it would be
> logical to use the higher number rather than lower]

Then it seems you are the one wanting to use them for "self-agitprop
purposes".

> The rationalizations for using "massaged" data have been and no
> doubt will continue to be great. :-)

I don't use "massaged" data. What you see is exactly what the posts say
it is: the total number of current FCC amateur licenses held by
individuals.

Why do you have a problem with that, Len?

Jim, N2EY

Perhaps you haven't heard of slow scan television? There are a number of methods of transmitting color pictures without the need for ascii character type graphics. The very first personal computers had very crude (or only ascii character) graphics. Why folks think that ham radio has stood still for 30 or 40 or 50 years beats the heck out of me ...

noted.

Well said, Kim, but also consider this: An opinion can be based on facts, or it can be based on falsehoods. It can be developed by sound reasoning, or by faulty logic.

Also, the term "serve his country in any capacity" has to be defined clearly. Does it mean only uniformed military service? That would leave out a lot of people like police, firefighters, EMS.
>
> > > Because, in the United States

Depends on your purpose, Kim. If you expect to convince "William" that he is mistaken about some things, it's probably futile. OTOH, if you want to point out his errors, express your own opinion and some facts, it's not futile at all.

> > > we--regardless of *military* service to the country or not--DO

sentiment to
> support our troops?! Again, your startling.

It should also be remembered that while military service is appreciated
and praiseworthy, our country and its freedoms, wealth and way of life
are not due solely to military service or military actions. Although
firefighters are important, they don't build houses - they only protect
them.

where it
> is I would go with this...so I'll not bother.

Well, I have some experience with scholarships, so let me add this:

The scholarships I had for undergraduate education were based on
academic achievement alone, as was my admission to the university I
attended. I also had National Direct Student Loans, all of which were
paid back on-time, with interest. I also worked full-time during school
breaks and part-time during the school year (if you can call 35+
hours/wk "part time") in order to pay for things not covered by
scholarship or loan.

Graduate education funding came from two sources: my pocket and my
employer, who would reimburse some of the cost of tuition *after* the
course was successfully completed. Taking one graduate course at a
time, the reimbursement worked out to about 40% of the tuition. Books,
fees and other costs were on me.

> > But that is not what I meant. Meanwhile, Len, who has served is

not
> worthy)...

It seems a lot of us are "not worthy".

What about police, firefighters, EMS and other people who have no
military service?

Or doctors, nurses, and other health-care people who risk infection
from incurable diseases on the job?

Or plain ol' working people, with no military service, who do dangerous
but essential things to keep the lights on, the water flowing, etc.?
The wires on the poles didn't put themselves up there, and when there's
a problem, the workers don't get to wait for a nice day to fix them.
>
> So, yeah. I asked. And, I should have known better...
>
> Kim W5TIT

I'll sum it up this way: Each and every person makes some sort of
contribution to a community/society, and is also a burden of some sort
too. Some people give more than they take, others take more than they
give. To judge someone, you need to know the sum total of what they
give and take, not just one item.

The person calling others "welfare freeloaders" doesn't know what he's
writing about. His opinion is not based on facts, and was developed
with faulty logic.

Of course he's entitled to any opinion he wants. Just as people are
entitled to believe that the earth is flat and/or less than 7000 years
old. Or that the moon landings were staged. Or any of many other things
that are simply not true.

>troll... :-)

Everyone seems to be of the fixed mindset (imaginary department)
that I am desiring to obtain an amateur radio license. Not true.

My continuing advocacy is simply the removal of the morse code
test requirement for any FCC-issued radio operator license.

Since removal or retention of that morse code test element falls
under the radio amateur POLICY subject matter, I am here for
such advocacy...as well as in other venues.

Nearly all individual correspondents in here are heavily focussed
on their own personal experiences and viewpoints (as well as
emphasizing their own alleged "expertise," aka bragging points).
They have difficulty in the concept of debate on a SUBJECT rather
than personality fights involving denigrating personalities who

don't agree with them.

Debating a SUBJECT rather than the personalities of the debaters should not normally be difficult. Unfortunately, the rather extreme polarization of individuals with thin emotional skins tends to destroy debates, rendering them to mere personality fights that are all too common in here.

I am not shy on expressing displeasure at the countless personal attacks posted here in "response" from polarized individuals who abhor anyone with opinions differing from theirs. As a semi-professional writer in addition to being a professional electronics design engineer (of some experience in radio communications of many kinds), my replies to such biased, personally-insulting individuals is a rather easy task. Such provides a bit of personal "entertainment" as well; if I abhor anything it is the rigid mindset of the extremely polarized self-righteous individuals who cannot tolerate (ever) any opinion other than their own. :-)

Well over two decades ago I became an advocate of elimination of the morse code test for a license. Not for myself, despite how "strange" that may appear to nearly everyone else. It is a SUBJECT which can stand on its own. That's not so among what seems to be the majority of radio amateurs in here. :-) By all the millions of words posted by all, especially those long-time licensees of the morse persuasion, there is NO debate. All shall continue for newcomers as it did for those old-timers when they entered amateur radio long ago. Those same individuals want to squelch debate fully off and misdirect all message content with perjorative postings on personalities of their "opponents." They have an imaginary territorial imperative that must be protected at all costs.

An example of the misdirection into personal pejoratives are nearly all the postings of "K4YZ" in here. Case in point: My description of the operations of the then-3rd-largest Army radio station in ACAN a half century ago. I did that to illustrate the "plain, simple fact" that the U.S. military did NOT plan on using morse code mode for fixed, point-to-point long-distance message handling back a half century ago. Such messaging made up the overwhelming bulk of military "traffic" worldwide at those times...as it does now. But now such "traffic" is found on DSN terminals which rarely use any HF radio for network linking.

"K4YZ" lacked such military radio communications experience, despite serving considerably longer than I did. He was ignorant of military communications history and even modern small-unit radio communications of today. He tried to misdirect my statements as personal bragging, trying to lie about military occupation specialty, and a host of other ugly statements, all of which was a number of lies originated by him. Not even close to debate, just a lot of meaningless personal insults from him.

>> Amateur radio is basically a HOBBY activity, engaged in for
>> personal pleasure and not for pecuniary compensation. As such it
>> is NOT any sort of "life saving" or "emergency" radio service.

>
>Emergency comms is listed as one of several reasons the FCC
>does ham radio licenses and allocates the bandwidth for us.

The FCC does not allocate bandwidth for "emergency comms"
in amateur radio other than the Alaskan emergency frequency.
FCC allocates several frequencies and bands intended solely for
emergency use, nearly all in coordination with international
radio communication agreements. Those are not in "ham bands."

The five definitions of amateur radio activities in Part 97, Title 47
C.F.R., are simple and most extremely general in subject. You
can read into those anything you want but let's face the facts
that most radio service part definitions are general in nature and
almost always politically motivated. "Political" in that they
provide some kind of baseline for disputes and competition with
other radio services as well as in the curious patois of the legal
profession.

Now for "emergency comms," a look into Parts 1 and 2 of Title 47
C.F.R. (as well as repetition of mention in other Parts) will reveal
that there is NO prohibition against anyone using any frequency or
any mode to perform REAL emergency communications. Self-
styled "radio cops" will come unglued at that, I suppose, but then
they were never properly glued down to begin with...

Did the majority of amateur radio hobbyists get into ham radio
BECAUSE of the "emergency comms" ability? I doubt it. Acronym
ARS doesn't stand for "Amergency Radio Service." Can amateur
radio be used for emergency communications? Of course. It has
been used that way in the past. However, there are many bands
and frequencies other than ham radio ones allocated for that purpose
and there are hundreds of thousands of radios already used by
Public Safety Radio Services expressly for such emergency and
protective use.

>No all hams will have working equipment in a regional
>disaster, but some will. And ham radio doesn't require
>infrastructure (like cell phones do) to work.

Careful. That is starting to drift off into the usual emotional fantasy
wish-fulfillment kind of thing that so many do. Think a moment.

Police agencies, fire departments, medical installations do not
have direct tie-ins with amateur radio. Neither do utility

companies, transport industries, contractor businesses and all
other entities which are DIRECTLY affected with emergencies.
Military and National Guard units have a nebulous tie-in through
MARS, but MARS frequencies are just outside ham bands. The
military has adequate communications means on its own and can
cope with large local and regional emergency aid. Yes, all those
agencies can be contacted by telephone...but the telephone is
part of the existing non-amateur infrastructure. :-)

There are several solutions already practiced by all those agencies.
The Greater Los Angeles area has had a working Disaster center for
a decade, already proven in several local emergencies (including the
Northridge Earthquake). That ties in ALL local government agencies
who regularly practice drilling and checking out of disaster-coping
plans; that assumes that SOME of the infrastructure already survives
(including the telephone system with its cell sites). The state of
California has the ECS, Emergency Communications System, and
the ECS will accept any system, any person as a volunteer. Since
California has already experienced a tsunami nearly destroying a
northern seacoast town, planning and drilling includes such disasters
in addition to the wildfires and earthquakes. The federal government
has SHARES (for "shared resources") which makes use of roughly a
thousand federal HF stations nationwide as well as around the world.

Of those groupings and of many other local, regional emergency
groupings, the ARE an infrastructure. In order for local amateur radio
operators and equipment to be effective, they must operate WITH
that infrastructure, that existing organization. They must learn to
integrate with dozens of existing local and regional agencies who
all have their own non-amateur radio equipment.

The "infrastructure" fails? No. It is there and survives. Yes, that
infrastructure can be altered by a disaster but it is far more adaptable
and robust than individual radio amateur hobbyists. Hams have to
learn and accept working with other agencies, not to day-dream
about being some lone hero saving the whatever.

>A car that survived will provide 12V power, which most
>rigs are designed to run off of. And you also need hams
>outside the disaster area to talk to.

Okay, lets consider a REAL emergency, such as a tsunami hitting
a coastal community. Some of the first communications out of that
area is an initial damage assessment, medical aid, requests for
earth-moving equipment, transportation of various kinds, perhaps
requests for food supplies (there could be other things). "Health
and welfare" messages of a personal nature are LOW on the priority
list. Can any ham inside or outside an emergency area handle all
the various items contained in that initial messaging with any ease
AND accuracy? Probably not. The existing agencies want
communications that are accurate, clear, that will get through NOW.
Initial emergency aid requests are immediate. Lives may be at

stake in that immediacy. That wouldn't be some kind of Field Day contest in a local park outing kind of thing.

Medical workers IN an emergency area will want to talk to medical workers outside of the area, directly to avoid any mistakes in requests for supplies or other medical aid. They can talk "medical." If there is earth-moving equipment needed to push back damage, those specialists will want to talk outside to other specialists. They can talk "bulldozer." And so forth, for all other occupations that would be of aid. Individual hams wouldn't have the knowledge to effect clear, error-free communications with ease for everything that is needed. Those that DO have the knowledge must be able to communicate directly with their counterparts outside of the area. Those could use their OWN radios and radio networks. Those exist. Amateur radio isn't the only radio resource and there is no guarantee that it would survive better than other radio services' equipment. The reverse is more likely true. The scenario of the lone ham hero saving the village is wonderful, emotionally-stirring fiction, but it remains fiction. Real emergencies aren't fictitious. They need aid agencies who can work together, plan together, drill together, and keep on practicing.

Where on earth did he say that? Another of these "quotes"?

Hams used VHF HF, and an internet link during the debris search. I
don't know if they used UHF or not

> This is getting to be like Laugh-In but without the humor...

It is there, you just have to look for it!

To call you by your given name would be to treat you with dignity
and respect, and we all know Lennie is incapable of that.

To address you by your callsign would be to acknowledge that you
have something he doesn't have...And again, Lennie can't do that.

Simple. Plain English is not to Lennie's liking. For it is by
creative wordsmitihing and deception that he can hide his own failures
and inadequacies. And he has plenty of both.

All numbers are *interpreted*. That a poster here chooses to use the word "massaged" which has a different connotation than interpreted, it is just another situation akin to your nonexistent quote "Hams used to do the 911 communications."

Raw data is just that. It signifies very little. Take the "grace period" for example. It should ONLY be included as a separate part of an interpretation. Same goes for club calls and a few other types of license. Even orphan classes such as Novice and to a lesser extent Advanced must be approached with caution, du to statistical difference in likelihood of activity. You do well to separate them.

My point is that using all numbers without differentiation will certainly lead to unclear results that the reader would have to do their own interpretation with.

To whom do you refer, Len?

> As an example,
> the data from www.hamdata.com for January 1, 2005, and January 1,
> 2004 is given following, as Hamdata totalled it -
>
> In the left blocks, in one year's time, there have been 12,203
license
> class changes. Total number of licensed amateurs is not affected
> by that. For the same period, there were 17,282 new amateurs, but
> 19,065 are expired and no longer licensed. As far as the overall
> license totals go, that means a 1,783 DROP in numbers. Not a
> big thing and might be ascribed to normal attrition rates.

Reducing the test requirements was supposed to produce *growth*. It
hasn't.
>
> The one thing the regular poster wants to downplay is the number
> of Technician Class licensees.

To whom do you refer, Len?

> Those have been continually growing
> and now make up (within 0.02%) two-fifths of all licensees.

Why is that significant? After all, there are only three classes of
license available to new licensees or upgrades.

> That
> growth rate is, by far, the biggest of all classes, amounting to
> nearly 10 thousand a year.

And it's quite understandable, because:

1) Most new hams start out as Technicians
2) FCC has been renewing Technician Pluses as Technicians since April
15, 2000
3) A Novice who passes Element 2 gets a Technician

Reason 2), all by itself, guarantees a stead influx of thousands of
licenses to the Technician totals each year. In a little more than 5
years, if the rules don't change, there will be no more Technician
Pluses at all. Every one will have either renewed as a Technician,

upgraded or expired.

So we should really look at the sum of Technicians and Technician Pluses to understand what's going on, because they are so closely linked. And that sum didn't grow very much in 2004.

> So much for the alleged "drop due to
> end of grace period." :-) That allegation turned out to be
false.

Who alleged that, Len? Who are you quoting?
>
> Class totals can be compared from Hamdata numbers based on
> January 1 of 2005 growth/decline relative to January 1, 2004:

Only one year. Can you make the same comparisons going back to, say,
2000?
>
> Technician 289,868 (39.98% of total) (growth of
9,902)
> Technician Plus 60,664 (8.37% of total) (decline of
9,326)
> Novice 35,894 (4.95% of total) (decline of
4,117)
> General 146,668 (20.23% of total) (growth of
846)
> Advanced 83,424 (11.51% of total) (decline of
1,566)
> Extra 108,537 (14.97% of total) (growth of
1,768)
>
> All excepting
> club calls 725,055
(decline of
> 2,493)
>
> Note: Rounding of percentages to one-hundredths decimals
> results in 100.01% instead of 100.00%.

And the significance of all these numbers is?

--

Here comes a *big* mistake on Len's part:

> All licensees are perfectly legal to continue operating in their
grace
> period.

Nope. Wrong. You are mistaken. Once an amateur's license expires, he or she *cannot* legally operate until the license is renewed and that renewal appears in the FCC database.

To quote FCC rules:

"97.21(b) A person whose amateur station
license grant has expired may apply to
the FCC for renewal of the license grant
for another term during a 2 year filing
grace period. The application must be
received at the address specified above
prior to the end of the grace period.
Unless and until the license grant is
renewed, no privileges in this Part are
conferred."

Last sentence says it all:

"Unless and until the license grant is
renewed, no privileges in this Part are
conferred."

This isn't some fine point of the rules that's subject to
interpretation. FCC amateur licenses have 10 year terms, and
if a license is allowed to expire, the licensee *cannot*
legally operate until the license is renewed. Period.

Do you agree or disagree, Len?

> There is no necessity (nor sense) to eliminate those in the
> grace period from those in the normal 10-year license period from
> any class totals.

Sure there is - their licenses are expired and they cannot operate.

If you want to include expired-but-in-the-grace-period licensees in the
totals, go right ahead. But be sure to indicate that you are doing so,
unless *you* want to "massage" the numbers.

The numbers I post twice each month are the totals of *unexpired*
licenses held by *individuals*. That's clear (to people who can
understand plain English) in every one of my post of license totals.
Nothing "massaged" about them.
>
> To repeat, the allegation that there is a "big drop" in Technician
> Class numbers is WRONG. Raw data doesn't show that. Implying
> that the allegation still exists is merely compounding the
wrongness.

Who made such an allegation, Len?

It should be noted that the sum of *unexpired* Technicians and
Technician Pluses *has* declined since May of 2000.

to
> do the 911 communications."

Agreed, Mike.

Len has posted here that it's legal for a ham to operate with a license that's expired but in the grace period. That's simply not true.

You'd think Len, who claims to know so much about radio, and who tells us how the regulations should be changed, would at least know a simple, basic fact about license terms and expirations.

No interpretation necessary on operating with an expired license, just read 97.21(b)
>
> Raw data is just that. It signifies very little. Take the "grace
> period" for example. It should ONLY be included as a separate part of an
> interpretation. Same goes for club calls and a few other types of

> Advanced must be approached with caution, du to statistical difference
> in likelihood of activity. You do well to separate them.

If someone wants to include expired-but-in-the-grace-period licenses in the total, and identifies the totals as including such licenses, that's fine. Where the "massaging" happens is when such pertinet details are left out.

It's like that picture of Hanoi Jane and John Kerry at the antiwar rally, sitting a couple of rows apart. Some folks like to leave out the pertinent fact that it was taken *two years before* Jane went to North Vietnam...

> My point is that using all numbers without differentiation will
> certainly lead to unclear results that the reader would have to do their
> own interpretation with.
>
It's simply a matter of including all the pertinent facts. And getting them right.

Of course it's also possible that Len has gotten so desperate for attention that he's intentionally posting untrue things (like the legality of operating with an expired license mistake) just to get a response. After all, how does it affect *him* if some ham reads his words, thinks they're true, and operates illegally?

These were not really pictures,but rather the "image" was made entirely by characters on a "real"teletype machine keyboard.In the '60s
there were a number of these would show up at various times.Xmas themes around the holiday,some pretty good images of Playboy centerfolds also made the rounds.
These had nothing to do with computers,the person making the image would cut a tape on his machine.The image could be sent without interuption.This was real RTTY,no computers.
I would think a few old timers would still have some tapes in their collection.

Yes, and hams can handle that low priority stuff to offload
the more important communications links. "I took care of
the mundane boring stuff so the heroes could save the lives"...

Can any ham inside or outside an emergency area handle all
> the various items contained in that initial messaging with any ease
> AND accuracy? Probably not.
>
> Medical workers IN an emergency area will want to talk to medical
> workers outside of the area, directly to avoid any mistakes in requests
> for supplies or other medical aid. They can talk "medical."

If such came up, the ham would give the doctor the mic and let
him talk directly. To another doctor at another ham shack
using the mic there. THis doesn't happen very often. and
thinking about it much borders on fantasy. But the FCC
says do whatever helps in an emergency.

And so forth, for all other occupations that would be of
> aid. Individual hams wouldn't have the knowledge to effect clear,
> error-free communications with ease for everything that is needed.

Nothing says that the ham is the only one allowed to use
the microphone or operate the radio. Usually the ham should
be around to help if something breaks, as "control operator"
but he need not be a control freak.

> Those that DO have the knowledge must be able to communicate
> directly with their counterparts outside of the area. Those could use
> their OWN radios and radio networks. Those exist. Amateur radio

True, but sometimes at random the ham radio survives and the
others don't. Not real often, but why forbid it?

The scenario of the lone ham hero saving the village
> is wonderful, emotionally-stirring fiction, but it remains fiction. Real
> emergencies aren't fictitious.

It doesn't happen that often, and when it did it's mostly an initial
call for help. In which case the aid agencies come to the rescue
and take over.

They need aid agencies who can work
> together, plan together, drill together, and keep on practicing.

> that I am desiring to obtain an amateur radio license. Not true.

Your story changes from month-to-month and year-to-year. Sometimes you
have no interest in obtaining an amateur radio license. At other times
you've indicated a decades-long interest in amateur radio. It can't be
both ways.

> My continuing advocacy is simply the removal of the morse code
> test requirement for any FCC-issued radio operator license.

There aren't many services for which a morse exam is required, are
there?
Has anyone requested your services as an advocate?

> Since removal or retention of that morse code test element falls
> under the radio amateur POLICY subject matter, I am here for
> such advocacy...as well as in other venues.

> than personality fights involving denigrating personalities who
> don't agree with them.

What I've seen from you, Leonard, is that your focus is based upon your
personal experiences and viewpoints. You seem to emphasize your own
alleged "expertise" (aka bragging points). You have difficulty debating
rather than engaging in the denigration of those who don't agree with
you.
Maybe you're thin-skinned.

> Debating a SUBJECT rather than the personalities of the debaters
> should not normally be difficult. Unfortunately, the rather extreme
> polarization of individuals with thin emotional skins tends to destroy

> common in here.

What's an "emotional skin"?

> I am not shy on expressing displeasure at the countless personal
> attacks posted here in "response" from polarized individuals who
> abhor anyone with opinions differing from theirs.

No, you seem always to have strewn rose petals in the path of those
whose opinion differs from yours. :-)

> As a semi-
> professional writer in addition to being a professional electronics
> design engineer (of some experience in radio communications of
> many kinds)...

Is this some of your "alleged expertise"?

> ...my replies to such biased, personally-insulting

You don't make it look easy.

> Such provides a bit of personal
> "entertainment" as well...

I find your attempts entertaining, Leonard.

> ...if I abhor anything it is the rigid mindset
> of the extremely polarized self-righteous individuals who cannot
> tolerate (ever) any opinion other than their own. :-)

Have you ever expressed tolerance for the code testing opinions of those
who do not agree with you? :-)

> Well over two decades ago I became an advocate of elimination of
> the morse code test for a license.

The world loves an uninvolved, self-appointed advocate.

> Not for myself, despite how
> "strange" that may appear to nearly everyone else.

...and there is near unanimity that it appears strange for you to be
advocating change in something in which you are uninvolved.

> It is a SUBJECT
> which can stand on its own.

Then why, pray tell, does it need assistance from you?

> That's not so among what seems to be
> the majority of radio amateurs in here. :-) By all the millions of
> words posted by all, especially those long-time licensees of the morse
> persuasion, there is NO debate. All shall continue for newcomers

> as it did for those old-timers when they entered amateur radio long
> ago.

That is simply false. When most of us passed the Extra exam, the code exam speed was 20 wpm. Now the speed is 5 wpm. The old entry level exam speed was 5 wpm. There is currently an entry level exam with no morse exam.

> Those same individuals want to squelch debate fully off and
> misdirect all message content with perjorative postings on personalities
> of their "opponents." They have an imaginary territorial imperative

> a half century ago. Such messaging made up the overwhelming
> bulk of military "traffic" worldwide at those times...as it does now.
> But now such "traffic" is found on DSN terminals which rarely use
> any HF radio for network linking.

That's all misdirection. Radio amateurs aren't part of the Army, nor do they handle bulk message traffic. What has any of that to do with amateur radio?

> "K4YZ" lacked such military radio communications experience,
> despite serving considerably longer than I did. He was ignorant of
> military communications history and even modern small-unit radio
> communications of today.

What has any of that to do with amateur radio?

> He tried to misdirect my statements as
> personal bragging, trying to lie about military occupation specialty,
> and a host of other ugly statements, all of which was a number of
> lies originated by him. Not even close to debate, just a lot of
> meaningless personal insults from him.

He tried to misdirect your misdirecting statements about what the Army did a half-century ago? To set the record straight, Steve just insulted you? You never insulted him, his jobs, his military service?

> >Emergency comms is listed as one of several reasons the FCC
> >does ham radio licenses and allocates the bandwidth for us.
>
> The FCC does not allocate bandwidth for "emergency comms"
> in amateur radio other than the Alaskan emergency frequency.

You're wrong, though I'm not surprised. The FCC has allocated specific frequencies for hurricane traffic or other emergencies any number of times. In 1983, the Commission authorized specific stations to conduct communications between an amateur station on Grenada and both State Department the U.S. military on 14.351 MHz outside the 20m amateur band. I was one of 'em.

:-) indeed. The Marshall County WV ARES comm van is equipped with amateur radio and county police/fire/medical/SAR radio equipment. ARES members have been trained in the use of the equipment and have been authorized to use it. The ARES group is funded by the county and is counted upon by the county.

We do that ROUTINELY in our quarterly hospital communication drills, where all intra- and inter-hospital communications (800 MHz systems) go down for an hour and the only comms are via ham radio (locally 2-m voice, 2-m packet, and 3/4-m SSTV). JACO (or whatever the acronym is - the hospital accreditation agency) now requires all hospitals to have backup communications by ham radio installed in the EOC or the ER or both (we have it in both) with licensed personnel on call, either on staff or volunteers, as a condition of continuing accreditation- at least here in the Pacific Northwest.

My "regular" volunteer assignment is as the voice operator for the inter-hospital net at the local (major) Med Center and we have facilities for having medical personnel talk "medical" to other medical personnel. Most of the traffic, though, is status info - reports of beds occupied/available, resources needed, etc. Anything of a record nature goes by packet. Graphics go by SSTV.

We've had two "live" events where the hospital was taken off the electric grid because of maintenance on the latter, and we stood standby watch for two 8-hour shifts. Fortunately nothing adverse happened, but we were ready and able to take over on a minute's notice.

Strange. These are all "served agencies" of our ARES/RACES
operation here in Washington County (suburban Portland). Why are
they "served agencies" with installed equipment and assigned
operators if they have no tie-in with us?

Similarly here in WashCo. Plus we are trained and authorized to
handle the served agencies' overflow traffic on our ham facilities
in the event that RACES is activated.

Amazing what someone who is not involved in the day-to-day nitty
gritty of amateur emergency communication training and operations
would want us to believe.

> Where?

I think he is referring to the article in QST about communications
without radiated energy. I'm extremely skeptical, but who knows what can
happen in the quantum world? Who would have figured that you can tell
what the spin of a split particle could be affected by the measurement
of the other particle that it was split from, without any connection.

Note that no radiated energy does not imply no energy used.

Absolutely, positively, without fear of contradiction WRONG!

The "grace period" (as it pertains to Amateur Radio application)
is that period of time between the EXPIRATION of your license, and the
point of time afterwhich you must re-examine for licensure.
In this case, two years.

AOL has been behaving strangely. Postings can be made but not seen.
This is after some days of multiple postings from the same author, old
posts reappearing after being marked "read", etc.

Which is why you're seeing this from Google.

Perhaps we should ask the people who are on the ends of that health and welfare, low priority comms how low of priority those are?

Like "Hello Mother and father, I am alive and healthy, but in need of a new passport."

How important is that? On the global scale, not to much, but critically important to the people involved....

Hello, Joe

Been there, done that - both from KG6AAY on Guam and in the various teletype rooms in the Navy back in the 60s. Around Christmas time, you'd see a lot of santa and the reindeer done in ascii graphics.

As to real RTTY, believe me you wouldn't want to be in one of those small rooms on a ship. Metal deck, metal bulkheads, metal overhead, and over a dozen teletypes clanking away. It was loud.

The only time that a licensee can continue to operate after the
license has expired is if an application for renewal was timely made
and that application has not yet been acted upon.

>
> Raw data is just that. It signifies very little.

"Raw data" is supplied by the FCC. You know, the agency in the USA
that actually GRANTS those amateur radio licenses. All that data is
found in huge data files, complete with the datafield identification so that
anyone can tally up what they want to tally.

Taking a look at Novice class licensees, anyone can see that the totals
for that class have been steadily dropping for years and years. No
"rocket science" intellect is needed to see that. Those who got started
in amateur radio via a Novice class license don't like that, but the fact
is there. No interpretation needed.

The original no-code-test Technician class license was responsible
for the overall amateur license increase in numbers, ever since that
class was first allocated 13 years ago. The Technician class license
of today has almost 40% of all licensees, far above any other class.
[at the present growth rate it might exceed 40% this month] That is
something the PCTAs vainly try to dispute.

Joe Speroni seems to be the first one disputing that no-code class.
Since the last Restructuring the no-longer-issued-new Technician Plus
class license was no longer allowed to be called a "no-code" license
due to the FCC changing renewals of the Tech Plus to Tech. Speroni
is a definite PCTA type. :-) J.P.Miccolis is another definte PCTA and
made much about Technician class licensees can never be called
"no-code" because of that renewal class change. :-)

One big problem with that (besides the PCTA unable to face reality) is
that the definitely-no-code-test Technician class licensees outnumbered
150K prior to Restructuring. That class total has never stopped growing
(at a rate more than other classes) since it began. The raw data from
the FCC contains enough information on all licensees to show whether
or not a Technician class licensee took a code test or not. PCTAs don't
seem to want to extract that. It refutes their claims.

There isn't any evidence that all those previous-Technician-class-who-
never-took-a-code-test are all "dropping out of ham radio" at the end of
the grace period on their first renewals. That was loudly and repeatedly

trumpeted by the PCTA, even Joe Speroni on the AH0A statistics web-
site. Most of them are still there, have renewed. What now? :-)

>Take the "grace
>period" for example. It should ONLY be included as a separate part of an
>interpretation.

WHY? The license holder isn't prohibited from doing anything after
midnight of the last day of his/her 10-year-active-license period...and
for two more years into that grace period.

There are many, many reasons, all valid, for being unable to renew
prior to the last day of the 10-year period. You created an artificial
thing there with your particular interpretation.

>Same goes for club calls and a few other types of
>license.

Club calls, as of 1 January 2005, numbered 9,329. I did not include
them in the grand total of 734,384. My posted total was 725,055 for
all classes. Club calls represent 1.27% of all call signs.

In truth, the military call signs, what few there are, were included in
the grand total. If you feel that their numbers are so overwhelmingly
important, just go to Hamdata.com and get them. They post that
data, too.

The raw data from the FCC has ALL that information.

> My point is that using all numbers without differentiation will
>certainly lead to unclear results that the reader would have to do their
>own interpretation with.

Your sentence structure is something up with which most won't put.

:-)

"Interpretation" and "massaging" raw data (classic case is the Speroni
stat-lumping of Tech and Tech+ after restructuring) seems to be a
necessity with the pro-code-test-advocate and the status-quoist who
is vainly trying to hang onto the past long after change has happened.

One bad little number from Hamdata.com: Those failing to renew any
license class in 2004 numbere 19,065. There were only 17,282 new
licensees so the delta is a -1,783. The ranting PCTAs will probably
rationalize that as "class changes" which would not apply...there were
12,203 of those and they do not apply to experiations or brand-new
licensees.

A few PCTAs have gone as far to say that "hardly any" of the brand-new
licensees went to Technician class. :-) The raw data indicates that
they did, against the ardent wishes of the PCTA. It's all in the FCC raw
data. You just have to sort it out. That takes work. PCTAs don't want
to do that, they want to obscure the raw data with their own massaging

and sound like gurus.

Untrue. (Some would say an outright lie) They are certainly prohibited from
operating their amateur radio station without supervision, since they
possess no valid operator license.

There is a difference. The ex-license holder is prohibited from
operating. The callsign is saved, and the ex-license holder will not
have to retest if they renew within that time, but they are no longer
permitted their privileges

> There are many, many reasons, all valid, for being unable to renew

It is not backwards. Raw numbers = unclear results = reader
interpretation. Seems like I put them in the right order. 8^)

> "Interpretation" and "massaging" raw data (classic case is the Speroni

THen explain how including ex-hams is *not* doing massaging of the
numbers? They cannot operate, all they can do is have some bit of
convenience if and when they do renew.

> One bad little number from Hamdata.com: Those failing to renew any

> and sound like gurus.

My own interpretation of the numbers is that there were a lot of
Technicians that did not renew their licenses, leading to a big falloff.
My suspicion is that they did not renew because they had been inactive
for years. Some of the activities that were attractive to them at time
of licensing are better served by other mediums such a cell phones, and
there will always be a certain number who will find a new hobby not
interesting enough to keep them in it. Of course there might be some
mortality reasons, and no doubt a few miscellaneous reasons.

But it happened regardless of the the reason(s).

Many people want to apply spin to the drop-off.

Some will say it is because dumbing down the tests didn't attract more
people to amateur radio. That seems like a strange reason to me, because
first I don't believe that the requirements have been "dumbed down".
Secondly, it is a negative reason anyhow, presupposing that a person is
thinking about becoming a ham, and that they know that the tests were
"harder" before their interest, so to spite themselves, they won't get
the license. That is pretty weird.

Others will say that it is because the Morse code requirement is too hard, causing people to become discouraged. Now I am absolutely sure that some people do indeed become discouraged at the learning effort and may drop out. I don't doubt that some did at the Technician level also. But there is no way that some 19,000 did.

My spin, or lack thereof is that times changed, and what attracted those people to Ham radio no longer attracts them. Probably the cell phone. Maybe some found that surfing the internet was a lot more fun and less challenging.

My final analysis of the situation is that it is encouraging in spite of the change. That we had 19K+ Hams fall out of the ranks, yet are close to making up for it is not a bad thing. It is too bad they didn't stay, but if they don't wanna be Hams, there isn't any way we can stop them! 8^)

That's simply not true, Len. The holder of an expired FCC amateur radio license cannot legally operate until the license has been renewed.

This is the second time I've seen you state that mistake here in the past few days. An expired FCC amateur license carries *no* operating privleges.

IS there some reason you persist in this obvious error?

> There are many, many reasons, all valid, for being unable to renew
> prior to the last day of the 10-year period.

Such as?

FCC allows renewal from 90 days before the expiration date. Renewal can be done online, or the appropriate forms can be downloaded or ordered well in advance and the renewal done by mail.

In any event, even if someone cannot renew before the license expires, they cannot legally operate while in the grace period.

> You created an artificial
> thing there with your particular interpretation.
Have you read 97.21(b)? It's pretty clear on the subject.

153. No More Technology Jail USA With Bandwidth-Based Spectrum Management

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-07 01:01:37 UTC
From: radioadventure@aol.com
Message-ID: <20050106200137.00405.00002507@mb-m17.aol.com>
Source record: 101668

Dear USA hams,

Recent developments and the difficulty of testing new methods of communications in the ham bands in USA are part of the technology jail we have built ourselves into with existing FCC rules. The ham bands used to be a place for pioneering the airwaves, but we presently have to go through strange contortions to work with new concepts in communications.

Now, there are some who want to build new and different technology jails into Bandwidth-Based Spectrum Management rulemaking for USA. These jails take the form of innocent-sounding exceptions to spectrum management based upon bandwidth alone. In some cases, they want to harken back to mode restrictions, in other cases they want to fence off certain protocols or operating procedures.

Many of the newer methods of communication technology make use of "handshaking", auto-transponding, or ARQ communication techniques. These are important techniques that can be applied to almost any emission type or signal method to enhance the ability for hams to dodge QRM, avoid interference from locally generated RFI noise, and even mitigate the interference from BPL. Yes, they can be applied to "Phone, Image, Data, Morse-CW, etc". They are presently in use by many other HF spectrum users, but relatively few hams. Eventually, these techniques will become commonplace in amateur equipment and routinely used by hams without a second thought.

Some say "the sky is falling", and they advocate carving out a chunk, or the creation of a "technology jail", on each band in the HF spectrum for these techniques. That is not only short-sighted, it is counterproductive for USA's Amateur Radio Service. Other countries that we communicate with on HF do not have rules with such "technology jails" in their amateur spectrum like we have in USA. Indeed, our neighbor to the north, Canada, has built no protocol prisons. We co-exist every day with Canadians on HF.

To carve out small chunks of such restricted subbands would put us back in the dark ages of the days when we had to work split (half-duplex) with other countries... hey, come to think of it... that's the way it is right now on 40m and 80m!

Let's break free of the amateur radio dark ages' technology jail and abolish it forever.

Eliminate all mode, protocol, and operating-procedure exceptions from new Bandwidth-Based Spectrum Management rule proposals.

ARQ has nothing to do with bandwidth! ARQ can exist at any bandwidth... including very narrow bandwidth... even slow Morse CW. ARQ can exist as a data mode, a phone mode, or an image mode. Protocols, operating procedures, and modes can be changed like the flavor-of-the-month... at the click of a mouse!
Example: PACTOR 1, PACTOR 2, PACTOR 3, etc. etc. etc.

The Pactor card is being played as a boogie-man scare tactic. It is not relevant to Bandwidth-Based Spectrum Management. IARU Bandplans are the place for discussions of Pactor. Perhaps if there was to be a new committee comprised of a wider cross-section of enthusiasts for a variety of amateur practices, this pitfall could be avoided.

Bandwidth-Based Spectrum Management must be "protocal-neutral" and "mode-neutral" to be fair, equitable, and provide a non-invasive framework for the future of communications technology in the Amateur Radio Service.

We all realize it is common in congress when they are writing a new law, to allow "riders" on the bills that are passed. The riders often have nothing to do with the original bill. But, this sort of politicking is counterproductive when it comes to the long-overdue need for technological advancement in the Amateur Radio Service. A "Pactor Rider" on the Bandwidth-Based Spectrum Management issue only serves to divide us.

Those who want to develop rulemaking about ARQ and automation have every right to do so in a separate proposal. But jamming it into the bandwidth issue simply isn't the right way to go about it.

I don't fault some the proponents who propagate restrictive technology jails. Many of them have never known the freedom USA hams had before they were built in the mid-20th century. The vicious cycle of continuing these restrictions was started within the ARRL's committee. The ARRL adhoc committee was mainly concerned with data communications and couldn't help being a Special Interest group... it was chocked full of specialists and experts in digital data communications.

But if we are all to benefit from change, we need more hams to be involved with these rulemaking proposals who can look beyond their Special Interest and be fair for everyone. Let's put away the microscope of Special Interest and get out the wide angle telescope. Change is on the horizon... marching toward us.

Change happens. Technological change is inevitable. Let's provide an open un-restrictive framework for technological change in the Amateur Radio Service.

Why are some operators afraid of Bandwidth-Based Spectrum Management?

One of the answers is:

Our present system encourages the use of brute force KILOWATTS to rule the airwaves!

Bandwidth-Based Spectrum Management levels the playing field, so it might be seen as a threat to big guns, loosening the tight grip of "frequency management by kilowatt fiat".

Through the routine use of spectrum-efficient, time-efficient, and power-efficient methods, it will be possible for the common amateur station to co-exist more equally, and eventually evolve from a world of QRO dinosaurs.

By the use of several standard emission bandwidths: 500Hz, 3kHz, and 10kHz, we can fit many more QSOs into our HF bands. Modern HF radios with brickwall filters enable more signals in the same band. Under the thumb of our olde 20th century mode-based frequency bands, many parts of our HF bands are dormant, while other parts of the same band are packed to the brim. It is not efficient, and we need to make use of all the available spectrum to both accommodate the traffic and to distribute activity so that amateurs maintain valuable spectrum. Use it or lose it.

By allowing any mode with 500Hz nominal bandwidth throughout the entire band, and allowing 80% of the band to be used by 3kHz nominal bandwidth signals, we not only expand within our useful spectrum, but we increase our ability to pioneer new modulation methods and communicate internationally. By devoting parts of our largest and least-used HF bands to 10kHz bandwidth, we make space for experimental signal types, wideband SSB, AM, FM, digital voice, time-division-multiplex, wideband digital voice, OFDM, email, high resolution images, high definition television, and simultaneous multimedia.

Management of HF Spectrum can be handled as a Communications Engineering issue.

It need not be difficult or highly charged with opinion and infighting.

To begin with, the word "mode" needs to be thrown out of the equation, along with the "mode war" that has been brewing.

It is extremely difficult to technically categorize what a "mode" is these days (in the traditional sense) anyway, and the olde definitions simply do not apply anymore.

Using simple math, it is easy to compute the proper spectrum distribution to include various bandwidth signals, accommodated by each band.

Here is an example of one simple way to use Radio Communications Engineering, to enable equitable planning for at least 200 simultaneous QSOs in a typical 350kHz-wide Amateur HF band:

A sub-band 50kHz wide at the lower part of the band provides space for 100 QSOs (comm channels) at 500Hz bandwidth.
100ch x 0.5kHz = 50kHz

A sub-band 300kHz wide at the upper part of the band provides space
for 100 QSOs (comm channels) at 3kHz bandwidth.
100ch x 3kHz = 300kHz

Obviously, on HF, there will be spectrum re-use due to skip zones,
spacial distribution of stations, and propagation. Also, signals not
consuming the entire 500Hz or 3kHz allotted comm channel will make
even more QSOs possible. For purpose of example, lets say this would
lead conservatively to an estimated 33% more QSOs. One possible use
for some of this extra 33% "free" band space could be to provide about
50kHz for comm channel bandwidths of 10kHz. The wider comm channel
bandwidth portions could carry legacy AM signals, more advanced
high-content signals, very robust low-content signals, "time-shared"
or multiplexed signals, or many variations of future experimental modes.

Another key ingredient that can be supplied to fit into the equation,
by analysis, is the actual percent of signal bandwidth distribution of
amateur activity on the air. This could be combined with
extrapolations based upon bandwidth trends over the past 20 years, to
plan for the next 10 years or so.

With a good dose of "fair and equitable" thrown in, it would seem that
a "blue ribbon panel" from a wide variety of Amateur practice could be
convened to help sort out the parts of the spectrum planning equation
that are not easily handled by the simple math.

Are we as ham radio operators in USA, falling behind other countries
technologically? Yes. Let's plan together so that we can enjoy the
freedom in USA to progress technologically... a freedom that many
other countries' hams already enjoy.

Some of us patriotic USA hams seek the freedom that other countries'
hams already have. We don't want to be left in the dust
technologically due to antiquated FCC rules.

Hello, Lloyd

Now that you mention it, a typhoon hit Saipan (I'm guessing around 80 miles from Guam) and took out the U.S. Coast Guard tower. This was sometime around 1968. A chief and another man or two were sent to Saipan to try and re-establish communications with Guam.

I was in the shack at KG6AAY (Naval communications receiver site) and heard "Sparkplug" (the Navy station on Guam) trying to contact "Sparkplug1" (the men sent to Saipan to re-establish communications). After a number of exchanges where the Guam site kept saying "you are loud, but garbled" (someone didn't know how to turn down the rf gain, I assume), I broke in. Given the circumstances, the FCC would not have objected. I made contact with "Sparkplug1" on Saipan as KG6AAY.

Within a matter of minutes, the command came down for the ham shack to pass the traffic directly to Commander, Naval Forces Marianas. Our commanding officer, Captain Delany (not sure if I got the name spelled correctly), appeared in the shack and secured 3 hams from all other duties as they were to rotate duty amongst themselves and maintain 24 hour communications with Saipan until he ordered otherwise. The hams maintained communications until repairs were made to the Coast Guard installation.

The guy on the other end (on Saipan) was Hans.
I have a lot of respect for that gentleman.

So what have you done that would allow you to think that Hans didn't do much?

On the emergency vehicle runs into the evacuating town of Valmeyer Illinois, during the 93' Mississippi flood, a ham accompanied each run because EMS radio communications wouldn't cover the area below the bluffs. But the amateur could communicate from below the bluffs up to a repeater on the opposite bank of the river in Missouri, and the ham at the dispatch could relay messages.

BTW, the town didn't make it.

But how often do you have a 500yr flood? (rhetorical question - K8MN need not apply).

You know W1AW could do the same thing. Heck the internet solves everything! maybe we should get rid of ham radio? after all everything you can do on ham radio you can do on the internet. Get rid of ham radio and we wouldn't have to worry about Hollingworth and his gestopo stomping on free speech. I'm sure all the ham bands we have can but sold off and used for some other service. Do get me wrong I'm all for ham radio but I am not for this crap of ham radio operators or the FCC gestopo atempts to control the content of amateur radio stations. I think since we have the internet we really don't need amateur radio or broadcast services because all of that could be done on web and thus, would free a lot of spectrum up.

Our last hurricane (1992) was a direct hit upon the island of
Kauai. All normal comms between Kauai County and the rest of the
state were wiped out. The ONLY comms between the governor here
in Honolulu and the mayor of Kauai was via amateur radio. Not
only H&W traffic was passed, but more importantly, safety of
life traffic, too.

Amateur radio is part of each county's emergency plan to the point
where ham stations are set up in each police and fire station.
Licensing exams are given regularly to police and firemen. Also,
every hospital has a station.

The state thinks so highly of amateur radio that our statewide
repeater system rides on the state-owned microwave backbone
which connects each county (island).

So, when normal communications go down, all the counties (islands)
of state are neatly tied together via ham radio.

Currently there are some 25 to 30 hams operating in various parts of the Andaman & Nicobar Islands, reports VU2MUE, Sandeep Baruah. On December 29th the Ministry of Communications & Information Technology Department of Telecommunications WPC Wing, Amateur Cell issued authorization to operate in the Andaman & Nicobar Islands to all Indian Ham Radio stations. The authorization was granted on December 29th and is for "Radio Amateurs" to "assist the Civil Authorities in handling the messages pertaining to the disaster at Andaman & Nicobar Islands". Those VU stations participating in operations from VU4 "shall inform" the "Ministry as per Amateur Service Rules".

Ham Radio volunteers have been providing helping hands to the Andaman and Nicobar administration and assisting different governmental and non-governmental agencies by coordinating rescue and relief operations locally. VU2CPV, Pravin Valera, who is a Police Official, has been operating from the APWD Guesthouse. Another ham station has been established at the Naval Airbase in Campbell Bay. VU3UTG, Parimal, is also operating from the APWD Guesthouse. Yesterday VU2JOS, Jose Jacob, was operating from a Relief Camp Ramakrishnapur, Little Andaman. Later yesterday he moved and is now operating from a new location at Hut Bay. VU2LIC, Ram is operating from Port Blair. VU2LIC and VU2CPV were QRV on 7095. VU2LFA, is also QRV from Port Blair.

The Tribune, an Indian on line news source, has another nice article about Amateur Radio in the Andaman Islands and the role played by VU2SON, Sonia Gandhi at http://www.tribuneindia.com/2005/20050105/nation.htm#23

It's just a mistake, Steve. Len Anderson obviously doesn't understand
97.21(b).

> >> There are many, many reasons, all valid, for being unable to
renew
> >> prior to the last day of the 10-year period.

> >Such as?

> Death? Coma? Prisoner-of-War (about the ONLY valid reason
>>I<< can
> think of...) ?

Well, someone could be ill, or busy with work, family, volunteer
activities,
travel, moving, natural disaster, military service, etc.

FCC doesn't care. If a ham lets his/her amateur license expire, they
can't legally operate until it is renewed. Such renewal is valid when
it shows up
in the FCC database - you don't have to wait for the paper license to
show

up.

All of this is *extremely basic* regulatory stuff, clearly stated in
97.21(b), not somebody's opinion or interpretation.

> >FCC allows renewal from 90 days before the expiration date. Renewal
can
> >be done online, or the appropriate forms can be downloaded or

> published in QST from the FCC...Seems Riley & Company have the same
> opinion...If your license "expires" on December 31st and you are
operating on
> January 1st, YOU have a problem!

Only until it's renewed.

What is most interesting is the fact that someone like
Len, who has told us how the regulations should be
changed for so many years, should be so ignorant of such
a basic rule from Part 97.

Ahem. :-) Isn't that the PURPOSE of a calendar? :-)

> Luckily, Jim's numbers, statistically, are a heck of a lot bigger than
>yours.

Tsk. INCORRECT. WRONG.

The size of date numbers on calendars are strictly a function of the PRINTER/PUBLISHER...and/or whoever pays for the complimentary calendar...or the ludicrous soul who actually pays a vendor to "buy" a calendar.

Statistics don't have much to do with calendars. Calendars are rather well-ordered, organized, not much open to interpretation.

Good luck on your attempts to understand the larger world of reality all around you. [it's a tough job but other folks have...]

BTW, what ham call does this "Santa" have and why is it giving away "kewl hamstuff?" Does the FTC know about this?

Tsk. Ye of little faith. :-)

Now what did I write that was UNTRUE? Hmmm?

"The license holder isn't prohibited from doing anything after
midnight of the last day of his/her 10-year-active-license period."

Was anything written about "operating an amateur radio station?"
No. :-) They could have a valid commercial license and not be
prohibited from using that. Note: A commercial license does not
allow operation IN the amateur bands...just like an amateur license
does NOT allow operation outside of amateur bands.

ALL of Title 47 C.F.R. applies to ALL USA citizens. Yes, that
includes amateur radio licensees. :-) In that you will find that, if
there is a REAL emergency situation, there is NO prohibition
against anyone using any frequency, any mode for help. True.
Ain't gonna be no Raddio Polizei saying "papers please" while
wearting leather topcoats and armbands in a REAL emergency.

Some argumentative amateur word-twister is going to pop in and
shout/holler "this is an amateur radio newsgroup!" Well, if so, why
is all the Chat Room nonsense going on between "regulars" in here
which is NOT about amateur radio? :-)

The rationalizations abound about that. Suddenly anyone with a
ham license can "justify" their Chat Room gabbling because they
once took a small test and got a certificate of "federal authority!"
Somehow I don't think the Chat Room regulars would accept an
FDA official talking about pork production...even though they would
have a real HAM license. :-)

I guess the "only ones who count" in here are the Regulars, the life-stylers, those who eat-breathe-sleep amateur radio. They are NEVER wrong. Their words are TRVTH itself, engraved in eternal marble. Their shall be no discourse with them...of course.

It's a religious thing. Something like "for the League, God, and Country" (in that order).

"Once a ham, always a ham." [it's like the murine corpse]

Get with the program, Grum.

...or admit you've almost plagiarized Dr. Dobbs' good journal name.

What do you want to know about the micro-broadcasting movement???

I myself joined the movement in 1998 after I had applied six times for a
license with waivers for a community that didn't have a service. The FCC
wouldn't consider my applications or waivers (which the Federal courts have
told them repeatly that they (FCC) "must consider waivers" So my opinion of
the FCC is that they are nothing buts LIARS, and are below pond scum.

Apparently you said that an amateur with an expired license was given
carte blanche to do *anything* after their license expired.

Maybe that is why so many allowed there licenses to expire. Now they
are not prohibited from doing anything! Kewl!

You wrote in an earlier message:

Lenof21> All licensees are perfectly legal to continue operating in
their grace
Lenof21> period. There is no necessity (nor sense) to eliminate those
in the
Lenof21> grace period from those in the normal 10-year license period from
Lenof21> any class totals.

Then you appear to have modified it to say:

> "The license holder isn't prohibited from doing anything after
> midnight of the last day of his/her 10-year-active-license period."
>
> Was anything written about "operating an amateur radio station?"
> No. :-)

Yes, because you wrote the above mentioned quote in an earlier message

> They could have a valid commercial license and not be
> prohibited from using that. Note: A commercial license does not
> allow operation IN the amateur bands...just like an amateur license
> does NOT allow operation outside of amateur bands.

So. They *are* prohibited from operating in the amateur bands. That is
significantly different than "not being prohibited from doing anything"

> ALL of Title 47 C.F.R. applies to ALL USA citizens. Yes, that
> includes amateur radio licensees. :-) In that you will find that, if

Emergency comms is in another ongoing thread. Do you believe that we are
trying to argue that expired licensees can't use any frequencies during
an emergency? I don't recall anyone saying that.

> Some argumentative amateur word-twister is going to pop in and
> shout/holler "this is an amateur radio newsgroup!" Well, if so, why
> is all the Chat Room nonsense going on between "regulars" in here
> which is NOT about amateur radio? :-)

Hehe, Word twisting? Commercial licenses and Emergency operations
dictated by an expired license?

> The rationalizations abound about that. Suddenly anyone with a
> ham license can "justify" their Chat Room gabbling because they

In that you are incorrect. I don't mind having a good discussion, and
even enjoy a good argument. But I do expect a good argument with proper
give and take. Some times I am wrong, and some times right. But your
case would be better served if you were to simply admit your mistakes
and move on to good debate.

> It's a religious thing. Something like "for the League, God, and Country"

Hello, Lloyd

Please remember that this is not a story from Hans - I was there.

My thoughts are this: most of us respond in an emergency in any way we can. Back around 1971, I was at a creek and there were a bunch of us swimming. One kid started hollering for help. I was around 23 years old at the time (he was 17). When no one was responding (there were kids closer to him), I dove in and pulled him out. No, I was not trained but knew I could hold my breath for a couple of minutes under water so I wasn't worried. I came up underneath the guy, grabbed him, and started doing a sidestoke towards shore. No big deal; nothing in the papers and I doubt the other folks had any idea of what happened. I simply responded as most of us would.

About 10 years back, a big snowstorm hit. It had houses buried up to the second floor in Brockport (near to Rochester). A bunch of snowmobilers aided in the rescue.

No biggie. I think we make too big a deal of the whole thing. Hans responded and did a lot for many folks. He does have some documentation to that effect. I wish we could get off the subject.

73 from Rochester, NY
Jim AA2QA

Of course it is. However, commercial band users MAY operate
in ham bands which are not allocated exclusively for amateurs. :-)

For that matter, the federal government seldom requires "licensing"
of radio operators, civilian or military, whether in or outside of
amateur bands.

>> ALL of Title 47 C.F.R. applies to ALL USA citizens. Yes, that

Not much in public evidence to support your claims. :-)

PCTAs demand capitulation to them by all NCTA. That's been implied
for as long as the League has been around. :-)

>Some times I am wrong, and some times right. But your
>case would be better served if you were to simply admit your mistakes
>and move on to good debate.

When I see "good debate" in here, I'll flag you down, run it up the pole,
prolly take out a billboard.

See...you are falling into the gruff "just capitulate to us PCTA" and
be nice attitude. :-)

> Let's do good discussions with proper give and take. Anything else
>risks irrelevancy.

Hey...you no like my NCTA tone, have me locked out of the newsgroup.

Don't worry, several others will call me names, usually names in
languages they don't know well. :-)

You ARE moderator, aren't you? Didn't Paul Schleck vacate the job
and make you Chief of Attitude Protocol? :-)

>>Some times I am wrong, and some times right. But your
>>case would be better served if you were to simply admit your mistakes
>>and move on to good debate.

A long time ago, in a galaxy far, far away, I thought so, too. Noooo,
in here good old KH2D pretty well set that straight for the PCTA side.
Must bin around 8+ years ago... :-)

Much better than the current crop of PCTApparatchiks.

Yourself included, by the way.

What is my "case," counsellor? Is this the Righteous Supreme Court
of Hamdom? Are you serving torts with coffee during recess? Does
the Court Gift Shop sell little souvenirs such as glit-framed pictures
of famous telegraph keys (with their own accent lights)? Maybe they
sell voodoo dolls of hated NCTA complete with complimentary pins?

My "case" seems to vary with whoever thin-skinned is injured the most.
To one I made a burn-in-hell-for-eternity mistake by NOT getting an
extra "out of the box" long ago. Tsk. He thinks that is utter and complete
failure to complete a Life Promise and shows moral turpitude (or something
that smells strongly, maybe like paint thinner).

Another says I can ONLY "show interest in radio" by getting an amateur
radio license FIRST. [no real reason given except he was bereft of any
comback and was trying to wing a reply] Well, that's just too #$%^!!!! bad
since I made that decision back 48 years ago, got a First Phone and
started working in broadcasting, using it. Only one other seems to
have a working time machine for regular trips back there...and before.

> When I see "good debate" in here, I'll flag you down, run it up the pole,
> prolly take out a billboard.

NO, repeat NO "debate" in here is really possible with anyone not-licensed-in-any-amateur-service correspondent. That's been proved so many times over by public example in 8 years, that it shouldn't need any comment.

This forum is EXCLUSIVELY for already-licensed amateurs to talk about getting INTO amateur radio? Of course. League has all the answers, just Follow The Law, do like everyone else did, and shuthehellup. Simple. Morse code testing is The Law. All must Obey the Law.

Nobody EVER should think heretical thoughts about Changing The Law.

Heresy! Blasphemy! [bite thy tongues, irreverent ones]

Tsk. Some of us do think the Law ought to be changed here and there.

Better call the Department of Homeland Security! The future looks full of tension and anxiety for the Antique Radiotelegraphy Society (ARS).

So, no like to work with raw data on U.S. amateur radio statistics?

Afraid to see the trends showing the changing interests in the hobby?

Like for the last dozen years?

Don't worry. JPM will be the savior, showing numbers that ease your worries, calm your anxieties. He is NEVER wrong. He say so...mebbe.

Meanwhile, rail and rant at all those who don't think quite like you do, Mike. Obviously we are all "mistaken" and "in error" (for that good old "plain simple fact'). You will be vindicated. Nothing the NCTA can possibly be right, can it? [some of us are so nice and obliging that we deliberately make errors...all to make you satisfied...hehehehehehh]

My thoughts are this: most of us respond in an emergency in any way we can. Back around 1971, I was at a creek and there were a bunch of us swimming. One kid started hollering for help. I was around 23 years old at the time (he was 17). When no one was responding (there were kids closer to him), I dove in and pulled him out. No, I was not trained but knew I could hold my breath for a couple of minutes under water so I wasn't worried. I came up underneath the guy, grabbed him, and started doing a sidestoke towards shore. No big deal; nothing in the papers and I doubt the other folks had any idea of what happened. I simply responded as most of us would.

About 10 years back, a big snowstorm hit. It had houses buried up to the second floor in Brockport (near to Rochester). A bunch of snowmobilers aided in the rescue.

No biggie. I think we make too big a deal of the whole thing. Hans responded and did a lot for many folks. He does have some documentation to that effect. I wish we could get off the subject.

73 from Rochester, NY
Jim AA2QA

===

Good idea. Getting off the subject, that is. There is no singular "Lloyd" posting these comments...Lloyd is a fictional character whose name has been used to foment comment after comment by parties with special interests. (aka Stalker AB8MQ)
At last count there were no less than four "Lloyds" in these groups. Take your pick...which Lloyd do you prefer?
Lloyd exists in name only.

You said you would.

The law was changed accordingly.

You have subsequently done nothing but make excuses.

In short, you lied. No big deal. You do it all the time.

> Another says I can ONLY "show interest in radio" by getting an
amateur
> radio license FIRST.

Another lie.

No one has ever said that. What HAS been said is that you have no established basis from which to make INFORMED opinons on Amateur Radio practice and policy since you do NOT have any practical experience as an Amateur.

> [no real reason given except he was bereft of any
> comback and was trying to wing a reply]

Yet another blatant lie.

You ahve been given REAMS of reasons. You just choose to ignore all of them in preference to your own EXCUSES.

> Well, that's just too #$%^!!!! bad
> since I made that decision back 48 years ago, got a First Phone
and

Uh huh.

Lennie, YOU are the ONLY one in this forum who routinely discusses ANY form of radio communication more than 10 years old.

Those of us who ARE licensed and ARE active in the hobby discuss current events and future plans.

> > When I see "good debate" in here, I'll flag you down, run it up the pole,

You're right...It doesn't need any comment. When it comes to YOU, all "debate" will be in your favor, on subjects YOU want to discuss, and only within parameters YOU establish.

Sucks to be you.

And you'd be ABLE to enter into more of those discussions IF you had some experience from which to draw upon.

A tour of duty in postwar Japan in the 50's is NOT "current events", nor is it even marginally relevent.

> This forum is EXCLUSIVELY for already-licensed amateurs to talk about

Actually, exchange "Lennie" for "League", and you have exactly summated all of your posts in this forum.

> Morse code testing is The Law. All must Obey the Law.

I see...You have a problem with obeying the law. That's obvious, of course.

> Nobody EVER should think heretical thoughts about Changing The Law.

Not at all...Just have a reasonable reason for changing it. "Just because everyone else is" is not a reason.

> Heresy! Blasphemy! [bite thy tongues, irreverent ones]
>
> Tsk. Some of us do think the Law ought to be changed here and there.

So do those of us who ARE licensed Amateurs. We've said so repeatedly. But since YOU disagree with OUR opinions, all we get is hateful bile and distortions from you.

> Better call the Department of Homeland Security! The future looks
> full of tension and anxiety for the Antique Radiotelegraphy Society (ARS).
> ---
>
> So, no like to work with raw data on U.S. amateur radio statistics?

So far, that's what Jim Miccolis HAS been doing. Real people with real lcienses...Not club, military, RACES or other categories that don't reflect true numbers of users.

It doesn't take a degree in statistics to follow Jim's numbers.

> in, the divinity of morsemanship ability above all other amateur skills.

What is different is that there is (or should be) an expectation of the
initial premise being true. It is simply not true that:

Lenof21> All licensees are perfectly legal to continue operating in
Lenof21> their grace period. There is no necessity (nor sense) to
Lenof21> eliminate those in the grace period from those in the normal
Lenof21> 10-year license period from any class totals.

You appear to want us to simply allow you to be "right", regardless of
your incorrect statements.

No thanks! 8^)

In an emergency there are those that stand around wondering what to do and waiting for someone to tell them what to do

Then there is the folks that see something needs to be done quickly -- and do it

The first bunch then criticizes and pulls a post mortem as to how it should have been done

Have seen this in the Military, the Steel Mills, in Ham Radio, and every day life -- many times

Kudos to Hans and onions to the criticizers and do-nothingers

Go to the FCC Universal Licensing System site and sign up. Then when you are in the 90 day window prior to your expiration date, you can renew on line.

Or you can download the forms, fill them in, and mail it in.

Or you can request the ARRL or W5YI process it for you for a fee. If you are a member of ARRL, I believe they will do it for free.

Yup, ARRL did it for me for free, been a member since I got my ticket in 94. They mailed me the stuff, I filled it out and sent it in to them. Got my renewal about 2 weeks later. Easy as pie!

>Shush! We'll have none of this no point A, point B nonsense.

Sorry. Scotty hadn't installed the Transporter yet. :-)

>Transmitting sites are always wherever you happen to be.

Heh. When tossing out about 450 KW of assorted HF RF, ain't too
many others wanting to live in that vicinity.

>Len, dammit, none of this pulse crappola. It was either CW or it was
>RTTY. Doan confuse us widda facts.

Well, that's how it goes. Radar be a pulse thingy. [somehow I'm sure
that Jeffie from the Islands will try to claim that Hawaii pioneered radar
to spot invading Japanese aircraft...and that every fire and police station
has a radar set just for that... :-)]

Police departments in the USA helped pioneer mobile VHF FM prior to
WW2, enough so that land armor forces had "channelized" push-button
select VHF FM radios in Yurp and foot soldiers had the old walkie-
talkie backpack VHF transceiver. FM. Voice. Like 1943 and out of
the Chicago Motorola works. SSB, the commercial variety of 12 KHz
BW carrying 4 voice-grade channels, was already linking WW2 troops
via HF to the mainland...the old clankety 60 WPM Teletypes riding about
8 at a time on 6 KHz worth of that SSB. Kind of "double frequency
multiplexing" which had been going on since the beginning of the 1930s.
[hams pioneered all that by writing it up in QST, didn't they?]

Screening. Profiling. Those who no code test have "no interest" in
radio according to one such "profiler." :-)

>Taliban welcome to FAA license.

Who else but FAA approved, certified, qualified, sanctified USA
flight schools taught the 9-11 hijackers how to fly?

>Hey, Mister!!! If the Taliban can master the Morris Code, so can you.

I suppose so. But, not wanting to bother shows that I am "un-interested"
in radio (one profiler) or am "too dumb" to pass one (many others), and
generally morally incompetent to exist in the shining presence of mighty
macho morsemen.

>Wonder if our Twin-Trade Tower Terrs were accomplished codesters?

Doubt it. Several U.S. government agencies allowed them in and to
attend flight schools here. Didn't hear about any secret terrorist plans
to wipe out any CW radio museums.

>
> And yet that seems so hard for some peope to grasp.

Tsk. Some grasp at straws. Especially the strawmen.

First of all, a search fails to turn up ANY evidence that "all normal
comms" were disabled on any island of Hawaii in 1992. Note: That
search includes the words 'normal communications.'

Searching on the Hawaii state government web information turns up
thousands of interesting bits of information on Hawaii, its police and
fire departments (some quite detailed, nice photos, etc.), laws in
process, various agencies, school system, and so forth. So much so
that it became unproductive to check out each search hit to verify the
items of Lecturer Herman's statements.

There is NO mention found that "policemen and firemen" are all given examinations IN amateur radio nor that amateur radio equipment is set up in each police and fire station. If that were so widespread as claimed, then each department would have featured that on their web pages, included it in law proceeding remarks/comments, and so forth. There's nothing from the Administration side of Hawaii government to indicate that happening. Not all hospitals are available on the web but the statement that "ALL hospitals have ham stations" is a bit over the top.

I'm open to some evidence other than the usual RACES propaganda to verify any of this "university lecturer's" claims. The state of Hawaii is
not a small one; it is important, a focus point for our Asian neighbors in the Pacific. Hawaii is generally considered "remote" by mainlanders and therefore those who wish to embellish a few truths seem to think they can get away with it, of not being checked out. Like some other fraternal order propaganda, telling folks what they want to hear will dissuade them from finding out it it is truth or not.

The state of Hawaii has an Interstate Highway System. It is fudging the truth a bit to claim one can drive that system to any other state...without another means to span part of the Pacific Ocean. I would suppose that a junior college instructor could call themselves a "part of the University of
Hawaii system" and that they "lecture on mathematics" if they hold classes under that instructor. But, the same "mathematics lecturer" (on the scale of Roger Penrose?) once claimed that the ARRL Amateur's Handbook was on a "bestseller" listing in the USA...and the American Bookseller's Association (ABA) couldn't verify that at all. :-)

Folks, we are getting into a huge embellishment project here with all these straw structures. In other venues it would be called LYING. In here it is apparently an Orwellian kind of Newspeak.

One could include risky activities like dealing with high voltages, climbing towers and other structures to raise antennas, etc.

>Why should society have to foot the bill when one of these
>idiots gets injured and can no longer support themselves. They made a
>presumably sober decision to do this.

OK so far.

>note that this is a little tongue in cheek, but I do have a bit of a
>moral issue with this.

What moral issue? Here's how it works:

Insurance companies have developed ways to figure out the risk factors and how they affect the chances those behaviors will result in payouts. And they affix surcharges to their premiums to compensate.

For example, life insurance policies usually have a "tobacco rate" and a "no tobacco rate". Homeowners' policies usually require an extra-cost rider if you have a pool. Etc.

Same principle could be applied.

--

Now here's a disturbing trend to consider:

One of the newest ideas in health care is the "specialty hospital". These are for-profit non-teaching medical facilities, often owned by the docs who work there, that focus on particular illnesses. Cardiology is a favorite.

The trick is that they do not accept any federal or state reimbursement - private insurance only. So they don't have to follow govt."guidelines" in many areas. They don't have ERs and they don't accept "walk-ins", only referrals with good insurance.

So what they get are the pick of the patients - those who can pay, are compliant, and who have good documentation. They don't have to cost-shift, so their prices are competitive.

Guess what happens to the "regular" hospitals?

Lenof21 wrote:

> All licensees are perfectly legal to continue operating in their grace
> period.

Nope. Wrong. You are mistaken. Once an amateur's license expires,
he or she *cannot* legally operate until the is renewed.

To quote FCC rules:

"97.21(b) A person whose amateur station license grant has expired
may apply to the FCC for renewal of the license grant for another term
during a 2 year filing grace period. The application must be received
t the address specified above prior to the end of the grace period.
Unless and until the license grant is renewed, no privileges in this Part
are conferred."

Last sentence says it all: "Unless and until the license grant is renewed,
no privileges in this Part are conferred."

This isn't some fine point of the rules that's subject to interpretation.
FCC amateur licenses have 10 year terms, and if a license is allowed
to expire, the licensee *cannot* legally operate until the license is renewed.

Do you agree or disagree, Len?

> There is no necessity (nor sense) to eliminate those in the
> grace period from those in the normal 10-year license period from
> any class totals.

Sure there is - their licenses are expired and they cannot operate.

If you want to include expired-but-in-the-grace-period licensees in
the totals, go right ahead. But be sure to indicate that you are doing
so, unless *you* want to "massage" the numbers.

The numbers I post twice each month are the totals of *unexpired*
licenses held by *individuals*. That's clear (to people who can
understand plain English) in every one of my post of license totals.
Nothing "massaged" about them.

> To repeat, the allegation that there is a "big drop" in Technician
> Class numbers is WRONG. Raw data doesn't show that.

What "raw data" have you examined, Len?

"hamdata.com" isn't "raw data".

Have you downloaded the FCC database? Processed it yourself?
Or do you simply take the numbers from a trusted website, same as
I do?

>Implying that the allegation still exists is merely compounding the wrongness.

Who made such an allegation, Len?

The sum of *unexpired* Technicians and Technician Pluses *has* declined since
May of 2000.

Unless the renewal has been applied for before expiration. Then,
the license privileges continue until the FCC acts upon the application.

That may be a bit rough, but it is cutting close.

Folkses who is full o' themselves are most especially Very Important
Peoples that should never ever be harmed, lest such harm hurt their
divine, noble, righteous thoughts within.

Their country owes THEM a living and they need do nothing for it other
than act anal-retentively lawful...and superior to others not as "gifted" as
they be.

You have to understand something of their motivations to see where they
are coming from (mostly the fantasies of their own imaginations). If you
served with the USAF in some distant land, they think that you HAD to
ask the FCC for legal counsel FIRST before operating any radio there...
and then they get pissed at you for obeying your real orders from the
USAF instead of them. <shrug>

Those fine superiors in here are all, naturally, morsemen tested at high
rates code cognition before the federal government. They are superior
supermen and anything they say is the Absolute Truth. No one else
can deny that Absolute lest they be buried in a veritable avalanche of
smug superiorness of hate mail. They will LIE, cheat, maybe even
steal, but whatever they do is Terribly Correct, Righteous.
They are the PCTA extras. That should say it all.

Yup, they couldn't interrupt their educations for military service,
they had more important things to do. Then they put down those who did
serve, then who then spent many years in night school to finally get
their education completed.

They talk and talk and talk about their service to their country, but
never say what that service entailed.

Who's that climbing the antenna mount? Why, it's Rev Jim. Hi!
Get ready for another sermon.

Oh oh. An exception to the rule rears its ugly head.....

How could the J & M tag team possibly miss that one? :)

It's certainly working here today via Google and my ISP. Earlier today
I responded to a thread authored by Coslo in the dot antennas group and
the bloomin' thing came up in the group within *seconds*! Astounding!
'Twas almost chat room and instant messaging speed.

That was only once earlier today, none of it is very stable so far and
the glitches are annoying.

The exception that proves the rule, Leo.

Certainly such a procedure would be necessary, as there is a finite
period that it takes the FCC to grant the renewed license, and a finite
period of time that it takes to get to them. So a person that renews
their license on the last day will always go beyond the deadline,
especially if they mail their renewal in.

> How could the J & M tag team possibly miss that one? :)

On the other hand, if the person waits one day *after* the license
expires, it is a different story, eh?

Happy New Year, Leo...

Sure enough, the PCTA extras in here disregard the subject in order
to lambaste (and generally make nasty to) any NCTA about anything.
:-)

Doesn't matter if the NCTA are right or wrong (deliberately so in the
case suddenly become front-page news of sorts)...all NCTA are
targets of opportunity to be DISCREDITED by any means possible.

The "tag team" seems to think that all hams are always active on-
the-air as good "service personnel" (or something) during their valid
license period. Never mind that there are absences from the "service"
for many different reasons. The "grace period" insures that such
absence will not allow any licensee to lose their (apparently) so precious
tribal identification of a call sign. The call sign is "who we are" to
quote
one licensee in here some years ago. That would be especially true
for the Vanity calls. Licensees POSSESS their calls and those become
very, very personal.

In the USA I might even suggest that the FDA (Food and Drug
Administration) step in and help the FCC literally brand the granted

call sign on the physical person of the licensee, perhaps by a tatoo. That might complete the process of the New Identity within the Tribe. [why not? the FDA here certifies real hams ... :-)]

The "new identity" is important since it bestows a rank/status/privilege down here in a land without royals, no fancy titles or whatever. For example, a Rhode Islander could, under older rules, suddenly become a "resident" of Hawaii without even leaving the mainland. The arranger of that was able to retitle hisself from junior college math teacher to "mathematics lecturer in the university system." Neither one "did anything wrong" according to them. But, a whole bunch of very phony "radio club" calls got tossed in the dumpster by the FCC not too long ago. Another fantasylander thought he had much more clout in the real world than the U.S. aremed forces when he admonished another about "permission to operate a radio" from Somalia when that individual served in the military there. Yet another fantasylander keeps on bragging about his military record ("seven hostile actions" without ever saying where or when) and then trying to tear down others' real military records. Tsk. Then we have the classic knowitall who never served at all making like he knows more than Janes about USSR air power just because a real veteran slipped up once in a message. There's still another "serviceman" of the amateur corps who dines with aircraft carrier captains and looks down his nose at those who've done real military HF communications much more than he will have done in his lifetime. It's quite a collection!

Note: All those wonderful braggarts are PCTA extra. They can say anything, write anything, do anything in here and are absolved from ANY criticism. Should they be taken to task, the task-taker is soundly objected to with endearing personal perjoratives having little to do with the subject.

It's a plain simple fact that all NCTA in here are always wrong, no matter what they write on anything. No one who is of the NCTA persuasion should bother debating the subject in here. The matter is closed and all NCTA are forever wrong, incorrect, and probably have underarm odor.

:-)

Fifty eight lines of USENET bandwidth wasted in yet another effort to twist, dodge, and otherwise evade the fact that, ONCE AGAIN, Leonard H. Anderson had stuck his foot into matters for which he has no experience or qualifications.

Furthermore, despite his ALLEGED "professional" career, he is obviously poorly versed in matters of radiocommunications regulatory matters, and any "guidance" he may offer to anyone in such matters must be given the closest and most intense scrutiny lest the unwary be led astray.

The ONLY thing "Orwellian" here is the idea that YOU represent any kind of honest, trustworthy or otherwise reputable point of view.

There's a LIAR here, alright, and it's Leonard H. Anderson. His mistruths and deceit are well documented in Google.

I'll give you this, Lennie...For a putz that routinely "embellished" his Army "career" with the sacrifices made by soldiers who died 3 years before you were ever inducted, you certainly have some huge cajones accusing others of "embellishment".

Face it, Lennie...As long as you continue to lie, deceive and misrepresent the facts, you will have your nose rubbed in your misdeeds in this forum.

You are not honest.
You are not trustworthy.

And THAT'S a fact.

Lenof21 wrote:

>All licensees are perfectly legal to continue operating in their grace
>period.

Nope. Wrong. You are mistaken. Once an amateur's license expires,
he or she *cannot* legally operate until the is renewed.

To quote FCC rules:

"97.21(b) A person whose amateur station license grant has expired
may apply to the FCC for renewal of the license grant for another term
during a 2 year filing grace period. The application must be received
at the address specified above prior to the end of the grace period.
Unless and until the license grant is renewed, no privileges in this Part
are conferred."

Last sentence says it all: "Unless and until the license grant is renewed,
no privileges in this Part are conferred."

But Len wrote:

"All licensees are perfectly legal to continue operating in their grace
period."

Not *some* licensees, or licensees who have sent in a renewal, but *ALL*
licensees.

That's clearly not true.

Do you agree or disagree, Len?

It's been discussed here before, but the only problem appears when you use another person's callsign in an amateur radio transmission. It's use anywhere else is not "4ID" and is not a violation of any kind. Or so I'm lead to believe.

A julian calendar would make that more obvious. Some don't realize
that their days are numbered if the numbers keep repeating every 30
days, or so. A new least on life or something like that.

Hop Sing go with Chinee calendar, where we will transition from year of
monkey to year of rooster on your Feb 9th. No year of ham in Chinee
calendar.

Interesting post. It doe not negate the fact that you have been wrong on several occasions. We all are at times. But it isn't "all NCTA's, or even NCTNA's. But that is okay. No damage done.

You post indicates that you are pretty upset about this. Don't be mad at yourself. Being wrong on a matter just means that the next time you won't be.

Chin up! 8^)

That's true even more so up here in the (currently) frozen North -
licenses and call signs are issued to Canadian hams for life, no
renewal required. The call sign is protected for a year after you SK,
to allow a family member to qualify and acquire it.

No bureaucracy, no renewals, no paperwork, no grace period required -
unless you break the law and lose it, or move to a new province (the
call sign doesn't follow you around the country like they do in the
States), you'll expire long before it does :)

It sure is.....engineers who have problems with basic math,
thinly-veiled trolls looking to provoke fights.....

It's a wonderful microcosm in here indeed. Of what, specifically, I'm
not quite sure! :)

>
> Note: All those wonderful braggarts are PCTA extra. They can say
> anything, write anything, do anything in here and are absolved from ANY

Ipso facto, with a few exceptions - there are several OMs here who are
quite civil, knowledgeable and conversational, and do not possess the
NetNanny gene.....

>
> It's a plain simple fact that all NCTA in here are always wrong, no matter
> what they write on anything. No one who is of the NCTA persuasion

> NCTA are forever wrong, incorrect, and probably have underarm odor.

.....and skinned knuckles! :)

Note that it isn't always a PCTA / NCTA thing, though - we've seen
recent battles between folks of a similar stripe, simply because they
disagree on some arcane point. These disputes are just as vitriolic,
nasty and profane as any of the 'standard' ones here in the group!

But, after all, what's more important than Always Being Right About
Everything? :) :) :)

> Agreed. Len made a mistake about 97.21(b), but he seems reluctant to
> admit it.

Note that the position he is taking is modifying. I've worked with a few
who do this. They really hate being wrong, but when they are proven
wrong, they slowly modify their stance so that eventually they either
agree with you, or " you just didn't understand" what they were saying
in the first place

> Think about *why*

A couple possibilities:

1. He was genuinely wrong. He made an incorrect statement, and is
embarrassed about it. Some people absolutely *hate* being incorrect on
anything.

2. He is making deliberate incorrect statements simply to invoke others
in arguments. This could be an entertainment issue, or perhaps a
loneliness thing.

One could include *not being underweight*. Believe it or not, I have
heard a researcher prescribe just this for everyone.

And what about gray areas. My ice hockey is an incredible aerobic
activity. This is good. But it is also a lot of high speed physical
contact with people armed with clubs. Not so good, and I have had
numerous injuries while playing.

The moral issue is that eventually those insurance companies and the
people who would control us will do just that. Eventually, people that
engage in "risky activities" will find themselves uninsurable.

"Life, liberty, and the pursuit of happiness as long as it carries no
physical risk"

> Insurance companies have developed ways to figure out the risk factors and how

I've listened to bootleggers on 20 and 75 Meters which have
been "operating" therin for over 15+ years.

Even more on 2 Meters local, mostly seems to be
weed-whacker pilots conversing in spanish.

FCC couldn't give a rat's posterior.

218. Petitioning the FCC?

Newsgroup: rec.radio.amateur.policy

I understand that Yankland has discontinued its Novice class
of licence, almost contemporaneously with Britland starting
the gangrenous degeneration that is the M3/CB Fools' Licence
scheme. As this scheme is little more than a bad joke, it being
possible to obtain a licence no later than two days after having
heard of it despite having no technical knowledge at all, is it
appropriate to petition the FCC to make it a felony for any
Yankland hams to QSO with an M3/CB Fools' Licensee on
the Ham Bands?

Unless we take a stand _NOW_ against this blatant CBisation
of Ham Radio, we may find that we are all treated as CBers
by our national governments in years to come.

Are we proud of being hams with all that is implied by the
efforts to get that licence, or are we no more than CBers,
and content to let the rot develop further?

Act now! Refuse to QSO with the M3/CBers and
petition the FCC to make it a felony!

> and content to let the rot develop further?

Beware - Airy R Bean - or Gareth Alun Evans, G4SDW, uses the word 'we'
in very slack ways - he really should say 'I personally' as no-one in
the UK wishes to be part of his 'we'.

> Act now! Refuse to QSO with the M3/CBers and
> petition the FCC to make it a felony!

Get your petition started old bean - would you like members of the
uk.radio.amateur newsgroup to visit you to sign your paper petition for you?

Maybe we could bring you some beer at the same time?

David.

> What do you want to know about the micro-broadcasting movement???

Is it made up of scofflaw types who have determined that the FCC has no
authority to regulate broadcasting? What is the legal standing of this
"movement". Why does the "movement" receive no play in the several
leading newsmagazines or on TV news shows? Is the objective of the
"movement" to take to the airwaves in defiance of the FCC?

Those questions will do for the moment.

> I myself joined the movement in 1998 after I had applied six times for a
> license with waivers for a community that didn't have a service. The FCC
> wouldn't consider my applications or waivers (which the Federal courts have
> told them repeatly that they (FCC) "must consider waivers" So my opinion of
> the FCC is that they are nothing buts LIARS, and are below pond scum.

You're quite sure that what you interpret as the FCC's non-consideration
of your applications wasn't consideration and rejection? Was it that
your applications and requests for waivers were for something quite
outside the regulations?

I'm sure that if you include terms like "LIARS" and "below pond scum" in
your communications with the FCC, you'll get some special attention.

You might want to consider that amateur radio might not be for you,
Todd.
There seems to be some confusion in your mind as to its basis and

purpose.
It is not a broadcasting service.

If you invest in a 100mw Part 15 AM transmitter and find yourself a nice clear spot on the BCB, you can play announcer to your heart's content.

Dave K8MN

I did not know that! Thanks, Phil.

Amend my statement to read:

Once an amateur's license expires, he or she *cannot* legally operate until it is renewed. If renewal has been applied for before expiration, the license privileges continue until the FCC acts upon the application.

However, it proves my point: *All* amateurs with expired licenses cannot continue to operate in the grace period. Only those who have applied for renewal *before the license actually expired* and whose applications have not yet been processed by FCC can do so.

Where in Part 97 is this documented?

>>Oh oh. An exception to the rule rears its ugly head.....
>>
>>How could the J & M tag team possibly miss that one? :)

It is *you* who are disregsarding the subject, Len.

Can *all* amateurs with expired licenses legally operate while in the grace
period, Len? That's what you claimed. It isn't so.

Do you retract your statement or stand by it, Len?

> Doesn't matter if the NCTA are right or wrong (deliberately so in the
> case suddenly become front-page news of sorts)...all NCTA are
> targets of opportunity to be DISCREDITED by any means possible.

Not at all, Len.

Your statement about operation in the renewal period was clearly wrong.
97.21(b) proves that. Has nothing to do with code testing at all, but has
everyhting to do with a basic understanding of Part 97.

Your statements err on the side of breaking the law rather than observing it.
>
> The "tag team" seems to think that all hams are always active on-

> for many different reasons.

Such as?

> The "grace period" insures that such
> absence will not allow any licensee to lose their (apparently) so precious
> tribal identification of a call sign.

That's not the issue. The issue is whether operating with an
expuired-but-in-the-grace-period license is legal. You've written that it is
legal for all amateurs. Part 97 says it isn't.

> The call sign is "who we are" to
> quote
> one licensee in here some years ago.

Who was that?

> That would be especially true
> for the Vanity calls. Licensees POSSESS their calls and those become
> very, very personal.

Is that a problem? Perhaps it is a sore point with you because you do not have
an amateur radio call sign.
>

Perhaps USDA could certify your posts as "100% pure bull", too....;-) ;-)

The plain, simple fact is that Len Anderson simply made a mistake on 97.21(b).
But he won't admit it.

224. Re: 401 Alarm... Was [Re: 97.21 (b)]

ALL such occasions, Mikey. :-)

It's a plain simple fact. :-)

>We all are at times.

Never if you are a PCTA!

PCTA are Keepers of the Flame (and of flame wars against NCTA).

PCTA are the Only sources of TRVTH in hamme raddio.

They keep on telling each other that...and being to believe it. Tsk.

> You post indicates that you are pretty upset about this.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHhahahahahahahah

It's a plain simple fact...your posting indicates you are trying to mask
someone else's comment or applying some weird salesman oil that
you think will calm waters or you are just so damn dumb you can't
understand sarcasm when it's served up to you on gleaming silver.
I'll bet on the latter.

Everything went about 50K feet over your head.

You might research "401 alarm" a bit and understand. But, QST
didn't print anything about it so I doubt you would know it. It would
be allied with the code word "wildfire." Perhaps even "agricultural
station." :-)

>at yourself. Being wrong on a matter just means that the next time you
>won't be.

Silly boy, trying reverse sarcasm doesn't work either.

The plain simple fact is that I - or any NCTA - can post ANYTHING,
whether right, wrong, or off the wall, and the plain simple factotum
in here will go into a prissy negative critique, perhaps even a prolonged
hissy-fit of superiority. :-)

That's the plain simple facts of content of THIS newsgroup.

"Discussion" is out. Personal denigration is IN. For a prime-cut
example, see the Avenging Angle's posting this same morning.
That paragon of perpetual personal pejoratives whacked off more
of his PR charisma for the PCTA cause...and you LIKE that...

Funny story: I used to use a Part 15 device on CB channel 14, 27125 kHz, to practice CW with my niece. She lived approx. 15 linear miles away and we were able to copy each other FB through some pretty "CBish" QRM.

BTW, the trick to remaining legal while "getting out" with a Part 15 device is to get the device itself as high as humanly/safely possible. The power and key cables were then brough down into the shack. A seperate high performance rcvr rounded out the package. No coax loss because...no coax. Just comply with the ERP restrictions and let your height be your might. Fond memories indeed.

Nope. As soon as the HF users reach a certain level of decline,
the FCC will auction-off the HF band for use in WI-FI local
broadband networking, telling the hams to enjoy "2 meters and down."
Count on it.

And in the end it is just a different system, some parts a lot better,
like lifetime license, and some parts worse, such as the mandatory
callsign by district (though some will prefer that)

Here's a challenge, Leo, if you're up to it.

Name the PCTA's in here (active) that have called NCTA's by such names.
I'll give you a start:

Steve is pretty famous for name calling.

And since this subthread turned into a Mike and Jim "tag-team" thing,
where do our names show up in that list? When have I called anyone a
nasty name? I don't think Jim ever has either.

note: I will admit the one time I called Len "Lennie". No insult was
intended, but he didn't like it, so I stopped.

> Note that it isn't always a PCTA / NCTA thing, though - we've seen
> recent battles between folks of a similar stripe, simply because they
> disagree on some arcane point. These disputes are just as vitriolic,
> nasty and profane as any of the 'standard' ones here in the group!

Agreed. So it is more about personalities than PCTA/NCTA/NCTNA in my
estimation.

> But, after all, what's more important than Always Being Right About
> Everything? :) :) :)

Most of the time, if I think I am wrong about something, I'm not likely
to argue about it. YMMV! 8^)

It is pretty much a voluntary thing to post in this group. I don't know
of anyone that is required by law or employment to be here. If people
are thin skinned, they might want to examine why they hang out in such a
rough neighborhood. Otherwise, make a mistake, note it, and get on with
life.

A good point, but not really an issue in this case. Once you think
about it, that sort of thing is mandatory. There is always a lag between
the application and issuance, So that lag would apply for the last day
of a persons license privileges.

Just like the IRS doesn't get the April 15th tax returns on April 15th.
What is important is that they are postmarked by then. If the mail takes
a week to get it to them, you are still covered.

> However, it proves my point: *All* amateurs with expired licenses cannot
> continue to operate in the grace period. Only those who have applied for
> renewal *before the license actually expired* and whose applications have not
> yet been processed by FCC can do so.
>
> Where in Part 97 is this documented?

That is a procedural issue that simply addresses what would otherwise
become a paradox. If you had to have your renewed license in hand by the
end of the ten year license period, that would mean that you would have
to have the application in some time before that.

How long before that? two weeks? a month? a year? If a date is set, who
is responsible if the FCC is backlogged and they don't get the renewed
license to you.

Would the new license expire ten years from the new issuance date, or
would it be a ten year plus X days, weeks, or months.

My point is that that procedure is what makes the most sense because it
sets a date by which you must have your renewal in by, not a date by
which you must have the renewed license back by.

Much much easier.

I would postulate that an amateur who has sent in their license renewal
by the expiry date *is not* operating on an expired license.

My precedent for this is what happened when I upgraded to General and
Extra. I operated with my new privileges after the test and before the
wallpaper arrived. In that case, I just noted my new status with my
callsign with the proper suffix.

In Oregon, all voting is by mail-in paper ballot which must be
received by the county election system no later than 8 pm on
Election Day. Postmark does not count. For the procrastinators
among us, though, there are convenient drop-boxes at well-publicized
locations, and depositiing a ballot in them constitutes "reception".

>Would the new license expire ten years from the new issuance date, or

And that's where the right to privacy comes into play. Also freedom from discrimination - if a person't susceptibility to a certain disease is due to heredity and not their own choice, that is.

We already have this sort of thing in other areas. Consider the building industry. If you want to put up almost any structure that people will live or do business in, you have to meet the applicable building and safety codes. Otherwise you won;t be able to get the required permits, loans, or insurance.

Even if you want to modify your own existing building, not following the codes can get you in big trouble, legally and financially. For example, if you do your own wiring but don't follow the code, and your house burns down because of it, your insurer can usually refuse to cover the loss.

>
> Uh huh...And that won't work.

Is what we have in place now working? People who want them seem to have no problem getting their hands on illegal drugs. Heck, how long did Rush Limbaugh abuse *legal* drugs (in an illegal way) before being caught?
>
>We have rules like that for alcohol and firearms yet people still insist
>on being stupid with them.

Of course. People are stupid with gasoline and electricity, too. Also motor vehicles of all kinds.
>
>The problem with the laws are that we WON'T use them to their full
>extent.

I agree 100%! That's the key to Cecil's idea: Enforce the laws based on *outcomes* of someone's behavior.

>Personally, I believe that we have more than enough laws to punish
>people
>who use those weapons illegally or improperly. Yet everytime there is some
>tragedy with a firearm, we go through yet another knee-jerk reaction of
>insisting that we take away the guns rather than enforce the laws on the
>books.

Let's get this straight:

The solution to firearms abuse isn't banning firearms. Instead, the solution is to have serious and swift punishment for the *abuse* of firearms.

And I agree 100%.

So then it follows logically:

The solution to drug abuse isn't banning drugs. Instead, the solution is to have serious and swift punishment for the *abuse* of drugs.

> Same with alcohol. It's only been in the last 10-15 years that we've
>finally decided to drop the hammer on alcohol abuse and DUI, but even then
>it's
>not unusual to find people who are still behind the wheel after four, five or
>more DUI's.

Because the laws aren't perfect, and there's a long history of classifying alcohol related highway deaths as "accidents".
>
> So...as I see it the ONLY benefit to legalizing drugs would be the
>potential tax revenues. But then we'll only spend those revenues building
>rehab facilites or more prisons to house the offenders, so what's the use?

Remember that about 85 years ago, ethanol was banned as a beverage in the USA. Rather than curbing the consumption and abuse of ethanol, banning it made the problem worse, and created/empowered new levels of organized crime.

>The ["microbroadcasting"] movemen began due to lack of community progams,
>consolidation of the airwaves.

Nah - the movement always existed - I chased pirate radio stations
before you were born, run by folks whose main raison d'etre was to
try to pull the FCC's chain, and the folks who trained me chased
pirate radio stations during WW-II.

>I think the whole purpose of the movement was to change the system which it
>did with the introduction of Low Power FM.

The ONLY reason [note the emphasis] that there is a "Low Power FM"
service is that Judge Claudia Wilkin of the Federal District Court
for the Northern District of California, Oakland Division was
refusing to enjoin Stephen Dunifer and his alter-ego "Free Radio
Berkeley" from transmitting without authorization unless the FCC
started that service, and she sat on that ruling for two years,
while other judges issued such injunctions without any delay.

The FCC blinked first just to get her off the dime, so to speak.

> I myself joined the movement in 1998

Todd Come Lately

> after I had applied six times for a
> license with waivers for a community that didn't have a service. The FCC
> wouldn't consider my applications or waivers (which the Federal courts

>1.3 the FCC may consider waivers at anytime if good cause is shown. In

>my waiver I was going to provide a television service to a community that
>doesn't have a TV service.

Notice your own words -- MAY consider. Not must consider. And even
if they did consider, they are under no obligation to grant said
waiver - especially of filing windows. In that regard, if everyone
else has to wait for a window YOU have to wait for one as well. What
makes your "good cause" more gooder than the next person's "good
cause"?

>Which In my humble opinion would constitute a good cause.

Not in the more qualified opinions of your "elders and betters" of
the Commission.

Sorry, Buddy, that won't fly in the real world of broadcast regulation.

>> I'm sure that if you include terms like "LIARS" and "below pond scum" in
>> your communications with the FCC, you'll get some special attention.

"Very" special attention. There's a special file for such.

>No it was only after the fact that they didn't consider my waiver I started
>calling them liars. They are liars because they would go to court against
>pirate radio operators and tell a judge that all a person had to do was
>apply for a license and ask for a waiver. But the reality they wouldn't
>consider applications or waiver and the FCC dismissing my application
>proves that the FCC are nothing but worthless LIARS.

Namecalling will get you very far in this business, friend.

Anyone can ask for a waiver - no lie there. Whether the waiver will
be granted or not depends on what the applicant wants the Commission
to waive.

Take your losses like a man and try again, this time getting
everything right. Then they'll get to the nitty-gritty about
whether you qualify to be permitted to operate a station or not.

With the attitudes which you have exhibited here, don't be surprised
if they decide that you are not.

I feel sorry for the Congressrep whom you are attempting to "advise"
on this matter of broadcast regulation.

What makes you think that those same restrictions would not apply to
a LPFM station or do you plan to operate this station without
complying with local zoning and use restriction ordinances?

Anyhow, one can always put a Part 15 device on top of an existing
structure - whether it's a building, a grain elevator, a lamp post,
whatever you can get the owner's permission for. Feed it with an
803.11(b) link (another Part 15 device) - no license needed for either.
Put up several around town.

Make technology work for you, rather than tilting at windmills.

http://members.aol.com/intwg/trolls.htm#WIAT

An Internet "troll" is a person who delights in sowing discord on the Internet. He (and it is usually he) tries to start arguments and upset people.

Trolls see Internet communications services as convenient venues for their bizarre game. For some reason, they don't "get" that they are hurting real people. To them, other Internet users are not quite human but are a kind of digital abstraction. As a result, they feel no sorrow whatsoever for the pain they inflict. Indeed, the greater the suffering they cause, the greater their 'achievement' (as they see it). At the moment, the relative anonymity of the net allows trolls to flourish.

Trolls are utterly impervious to criticism (constructive or otherwise). You cannot negotiate with them; you cannot cause them to feel shame or compassion; you cannot reason with them. They cannot be made to feel remorse. For some reason, trolls do not feel they are bound by the rules of courtesy or social responsibility.

Perhaps this sounds inconceivable. You may think, "Surely there is something I can write that will change them." But a true troll can not be changed by mere words.

>Remember that about 85 years ago, ethanol was banned as a beverage in the >USA.

Wrong, completely WRONG.

There's nothing in the 18th Amendment (which went into force in 1920) which says "ethanol."

Paragraph 1 of the 18th Amendment says "After one year from the ratification of this article, the manuafacture, sale, or transportation of intoxicating liquors within, the transportation thereof into, or the exportation thereof from the United Staates and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited."

Note that the word "beverage" doesn't show up until the last line, almost an afterthought.

Absolutely nothing mentioned "ethanol."

That Amendment was repealed 13 years later.

>Rather than curbing the consumption and abuse of ethanol, banning it made the >problem worse, and created/empowered new levels of organized crime.

You tellum, Mr. Crime Fighter.

What all of that has to do with "amateur radio" or "mode/band use in 1961" is unknown.

None of Prohibition happened when you existed. Why are you so concerned about it? It isn't the FCC's or NTIA's job to enforce anything about alcohol. Try the ATF.

There are several other newsgroups that just love to talk about such things. Try those venues, okay?

Brain-deadness isn't necessarily a disease, nor is the attitude some
folks to have thinking a policy pub is a neat lil Chat Room all for
them to talk about anything...because they are here all the time. :-)

>We already have this sort of thing in other areas. Consider the building
>industry. If you want to put up almost any structure that people will live or
>do business in, you have to meet the applicable building and safety codes.
>Otherwise you won;t be able to get the required permits, loans, or insurance.

Building codes are quite different from morse codes. :-)

Morse code can be removed yet amateur radio won't fall down.

>Even if you want to modify your own existing building, not following the
>codes

Are you afraid U.S. amateur radio will fall down if morse code testing
is removed.

You are telling me "NO" when I was the one who prepared all the
paperwork for the Dunifer case, read every filing, and sat at the
table for each and every hearing?

What planet are you living on, fella? That was MY case.

>It's really shame to since Dunifer can apply for
>license since the Radio Broadcast Preservation Act of 2000 bars all pirates
>from getting a license.

You must have made a typo - Mister Dunifer cannot be granted a
license. Plain fact. The choice was his.

>> > So my opinion of the FCC is that they are nothing buts LIARS, and
>> > are below pond scum.
>>
>> All because they decided that you didn't quailfy for a waiver....

>appeal in the US court of Appeal. .

Most probably the waiver was denied and the application was dismissed.
The net result was that you didn't get the license.

>> Notice your own words -- MAY consider. Not must consider. And even
>> if they did consider, they are under no obligation to grant said
>> waiver - especially of filing windows. In that regard, if everyone

>> cause"?
>
>yes but they must either grant and deny a license. and waiver may be

>consider at anytime filing windows don't apply.

Please explain this in English. Also regard your own word "may".
Even if they did consider it, it can be denied. What part of the
process do you fail to understand?

Don't feel too bad. Some of the waivers that I have applied for on
behalf of clients have been granted, some have been denied. It's a
crapshoot and a regular part of the regulatory game. Get used to it.

>I also think that by
>dismissing my the commission has hurt this community by not consider the
>waiver for a "community that has no local television service"

Your thoughts and the Commission;s obligations are two different
things, it appears.

>So where is the public interest? Others? what others?

Every other applicant who missed the filing window.

>Not that many people in this community can afford to apply for a license
>or could care less to apply for a license.

Ah, in other words the community isn't really panting for the station.
Mister Daugherty wants the station..... Now the picture becomes clearer.

>> Namecalling will get you very far in this business, friend.
>>
>> Anyone can ask for a waiver - no lie there. Whether the waiver will
>> be granted or not depends on what the applicant wants the Commission
>> to waive.
>
>Again they have to grant or deny a application and show good cause why it's
>in the public interest to deny the license and waiver.

Missing the filing window is prima facie "good cause" for returning
the applicatin as defective, which apparently they did. You were
free to appeal to the full Commission and from there to the U S
Court of Appeals for the District of Columbia. By not doing so, you
lost your chnace to get the decision reversed.

And you are misinterpreting the "public interest" requirement. The
Comm Act mandates the Commission to make a finding that the public
interest will be served before granting a license. It does not
mandate the Commission to show why a dismissal is in the public
interest, only that the dismissal must be according to the established
Rules and other applicable law.

Looks like you are unlettered in Federal Administrative Law as well.

Stay warm, Todd. It's cold out there.

Ah, now we're getting down to some nitty-gritty issues.

Did you think that you would be able to put something up on
non-private property without paying hefty fees?

What would stop you from putting the device on the roof of the
tallest building in town? The fees for the use permit?

If the city REALLY wanted the station, they have the power to waive
those fees. What does that tell you?

And if the FCC was to grant you the authorization for your LP
station, would that disappear the above problems like magic?
PRB-1 does not apply to anything but an amateur radio antenna
support structure.

How did we get back to ham radio ???

Welcome to the world of zoning and permits for communication
facilities.....

Running is certainly safer than Ice hockey; there are some injuries
that can happen in it also. Another odd thing around here is that
occasionally a runner will be running in a trance state and get hit by a
car when they run in front of it. I've had to stand on the brakes
occasionally to avoid a runner that is somewhere past the wall.

Of course those who think that they don't want to insure you because of
your smoking would really really like lots of other things about you.
And this is a good time for them to chip away at your privacy rights.

Were there any intoxicating liquors banned other than those containing
ethanol?

Was it not ethanol that *defined* whether a beverage was an
"intoxicating liquor" or not?

> That Amendment was repealed 13 years later.

Think about *why* it was repealed.

Is that statement untrue?

> What all of that has to do with "amateur radio" or "mode/band use in 1961"
> is unknown.

Then answer this question, Len:

You previously wrote:

"All licensees are perfectly legal to continue operating in their grace period."

Is that true?

Or did you make a mistake, Len?

Note that you wrote "all licensees", not just those who had submitted renewals to FCC prior to their license expiration date.

>request" Turro v FCC (1989)

Denying your request does not mean that they did not take a "serious
and hard look at [your] waiver request". As I said before - sometimes
they grant it, sometumes they deny it. That's how the game is played.

I say again:

You were free to appeal to the full Commission and from there to the U S Court of Appeals for the District of Columbia. By not doing so, you lost your chance to get the decision reversed.

This is going nowhere. It is not applicable to ham radio, and I've said my piece about it here. If you don't want to listen to what I tell you, it's your loss.

Stay warm, Todd. It's cold out there.

I might comment on this if I had a clue about what you are attempting to
say. If you can't put forth your ideas any better than this, no wonder
the FCC denied your petition, they probably didn't know what you were
talking about either.

It's paid for with federal funds, thus it's part of the federal interstate
highway system. It's no different from Interstate 405 in California: It
begins in LA and ends in San Diego -- it never leaves the state yet it's
yet it's still an "interstate."

> I would suppose that a junior college instructor could call themselves

The movemen began due to lack of community progams, consolidation of the
airwaves. As for news magazines an TV news shows there have a number of
article in the papers (Wall Street Journal, Reason Magazine as well as
other) as for news on television it has be talked about on both CNN and FOX.
I think the whole purpose of the movement was to change the system which it
did with the introduction of Low Power FM.

>
The Federal Communication Commission dismissed my application because according to them I didn't file during a filing window. However under 47 CFR 1.3 the FCC could of consider my waiver. Because under 47 CFR 1.3 the FCC may consider waivers at anytime if good cause is shown. In my waiver I was going to provide a television service to a community that doesn't have a TV service. Which In my humble opinion would constitute a good cause.

> I'm sure that if you include terms like "LIARS" and "below pond scum" in
> your communications with the FCC, you'll get some special attention.

No it was only after the fact that they didn't consider my waiver I started calling them liars. They are liars because they would go to court against pirate radio operators and tell a judge that all a person had to do was apply for a license and ask for a waiver. But the reality they wouldn't consider applications or waiver and the FCC dismissing my application proves that the FCC are nothing but worthless LIARS.

> You might want to consider that amateur radio might not be for you,

Not true, Amateurs may run Information Bulletins so, amateur's are not completely banned from some for a Broadcasting. There is of course a difference between Broadcasting and Information Bulletins. Broadcast are programs directed either relayed to the general public. while information bulletin are bulletins directed to the amateur community with information dealing with amateur radio. A bulletin according to Webster is a piece of information directed to the public or a group. So you see some form of "Broadcasting" is allow. My progam which I run on 10 meter deals with issues and information concerning Amateur Radio.

> If you invest in a 100mw Part 15 AM transmitter and find yourself a nice

Part 15 device are never have nor are attended for broadcasting. Part 15 device are short range as a matter of fact part 15 device are suppose to have the range to cover a person's yard. I know it can be said that a part 15 device can go farther, however part 15 was not attended for that purpose.

Part 15 power range depends o the frequency and band for example on the AM band it is 100 miliwatts while on the FM broadcast band it's 250 microvolt per meter at 3 meters. on 13 MHz. the power is 10,000 microvolts per meter at 30 meters.

I would have no problem with Part 15 device except I think the one thing holding part 15 device back is that some community tight restriction on antenna heights.

Perhaps you'd like something more directly connected to FCC rules and
regulations for the amateur radio service:

Lenof21 previously wrote:

> All licensees are perfectly legal to continue operating in
> their grace period.

That's simply not true.

To quote FCC rules:

"97.21(b) A person whose amateur station license grant has expired may
apply to the FCC for renewal of the license grant
for another term during a 2 year filing grace period. The application
must be received at the address specified above prior to the end of the
grace period.
Unless and until the license grant is renewed, no privileges in this

Part are conferred."

Last sentence says it all: "Unless and until the license grant is renewed, no privileges in this Part are conferred."

FCC amateur licenses have 10 year terms, and if a license is allowed to expire without a renewal application being filed, the licensee *cannot* legally operate until the license is renewed.

Do you agree or disagree, Len?

You also wrote:

> There is no necessity (nor sense) to eliminate those in the
> grace period from those in the normal 10-year license period > from any class totals.

Sure there is - their licenses are expired and they cannot operate.

If you want to include expired-but-in-the-grace-period licensees in the totals, go right ahead. But be sure to indicate that you are doing so, unless *you* want to "massage" the numbers.

Phil,
There are some communities that will not allow you put Part 15 devices.
There's a big difference between LPFM and part 15, LPFM is consider a legal
radio system while some community don't grasp what part 15 devices are.

True, "pirate radio" has been around since the advent of regulations. but
what became the modern grassroot movement didn't begin until the mid 80's.

NO the only reason low power FM was created was due to the continued growth
of pirate radio. the FCC would shut down two pirate stations and three more
would come on the air. It's really shame to since Dunifer can apply for
license since the Radio Broadcast Preservation Act of 2000 bars all pirates
from getting a license.

There's a difference at a denial and a dismissal....and the courts have also
told the FCC that they must take a serious look at waivers. That includes
the reason while there is a denial of the waiver so that person can file a
appeal in the US court of Appeal. .

yes but they must either grant and deny a license. and waiver may be
consider at anytime filing windows don't apply. I also think that by
dismissing my the commission has hurt this community by not consider the
waiver for a "community that has no local television service" So where is
the public interest? Others? what others? Not that many people in this
community can afford to apply for a license or could care less to apply for
a license.

Again they have to grant or deny a application and show good cause why it's
in the public interest to deny the license and waiver.

Greetings and happy new year...

I realise that this question might be a bit overkill since both your goverment and mine, I am Canadian, are both discussing the morse code hf requirement... but please bear (possible spelling) with me...

I am trying to get back onto hf cw but am running into a problem... my cw is yucky... and I have forgotten the u.s. cw only subbands and ... is there still a novice subband... It used to be from 3700 to 3750 and there was one of 40 meters... I want to use the slower speed cw as code practice...

Does anyone know if there is a website with lists the various ham bands and the u.s. subband breakdown... I need to bring my code speed up, both sending and receiving....

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 15

[ET Docket No. 04-37 and ET Docket No. 03-104; FCC 04-245]

Broadband Power Line Systems

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document adopts new requirements and measurement guidelines for a new type of carrier current system that provides access to broadband services using electric utility companies' power lines. This new technology offers the potential for the establishment of a significant new medium for extending broadband access to American homes and businesses. Given that power lines reach virtually every residence and business in every community and geographic area in this country, Access BPL service could be made available nearly everywhere. This new broadband delivery medium could also serve to introduce additional competition to existing cable, DSL, and other broadband services. We believe these actions will promote the development of BPL systems by removing regulatory uncertainties for BPL operators and equipment manufacturers while ensuring that licensed radio services are protected from harmful interference.

DATES: Effective February 7, 2005, except for Sec. Sec. 15.615(a) through (e) which contain information collection requirements that are not effective until approved by the Office of Management and Budget. The FCC will publish a document in the Federal Register announcing the effective date for those sections.

Final Paperwork Reduction Act of 1995 Analysis

This document contains modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public to comment on the information collection requirements contained in this R&O as required by the Paperwork Reduction Act of 1995, Public Law 104-13. Public and agency comments are due March 8, 2005.

ADDRESSES: Comments on the information collection requirements should be addressed to the Office of the Secretary, Federal Communications Commission, 445 12th Street, SW., Washington, DC 20554. In addition to filing comments with the Secretary, a

[[Page 1361]]

copy should be submitted to Leslie Smith, Federal Communications Commission, Room 1-C804, 445 12th Street, SW., Washington, DC 20554, or via Internet to Leslie.Smith@fcc.gov <mailto:Leslie.Smith@fcc.gov>, and to Kristy L. LaLonde, OMB
Desk Officer, 10234 NEOB, 725 17th Street, NW., Washington, DC 20503 or via the Internet to Kristy_L._LaLonde@omb.eop.gov <mailto:Kristy_L._LaLonde@omb.eop.gov> or via fax at (202) 395-5167.

FOR FURTHER INFORMATION CONTACT: Anh Wride, Office of Engineering and Technology, (202) 418-20577, e-mail: Anh.Wride@fcc.gov <mailto:Anh.Wride@fcc.gov>, TTY (202) 418-2989.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Report and Order, ET Docket No. 04-37 and ET Docket No. 03-104, FCC 04-245, adopted October 14, 2004, and released October 28, 2004. The full text of this document is available for inspection and copying during normal business hours in the FCC Reference Center (Room CY-A257), 445 12th Street, SW., Washington, DC 20554. The complete text of this document also may be purchased from the Commission's copy contractor, Qualex International, 445 12th Street, SW., Room CY-B402, Washington, DC 20554. The full text may also be downloaded at: http://www.fcc.gov <http://frwebgate.access.gpo.gov/cgi-bin/leaving.cgi?from=leavingFR.html&log=linklog&to=http://www.fcc.gov>.
Alternate

formats are available to persons with disabilities by contacting Brian Millin at (202) 418-7426 or TTY (202) 418-7365.

Congressional Review Act

The Commission will send a copy of this Report & Order, in a report to be sent to Congress and the General Accounting Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A).

Summary of Report and Order

1. In the Report and Order, the Commission adopted new rules for Access Broadband over Power Line (Access BPL) systems, a new type of carrier current technology that provides access to high speed broadband services using electric utility companies' power lines. This new technology offers the potential for the establishment of a significant new medium for extending broadband access to American homes and businesses. Given that power lines reach virtually every residence and business in every community and geographic area in this country, Access BPL service could be made available nearly everywhere. This new broadband delivery medium could also serve to introduce additional competition to existing cable, DSL, and other broadband services. In addition, the National Telecommunications and Information Administration (NTIA) has undertaken a significant effort to both study Access BPL technology, including its operating characteristics and interference potential, and to make specific recommendations to the Commission for policies to encourage its implementation and to manage its interference potential. Our staff has worked closely with NTIA on this matter and the policy decisions and rules we adopted reflect that cooperation and embody many of NTIA's recommendations.
2. Along with NTIA, we recognize the concerns of authorized radio service users in both the private and government sectors for the need to ensure that radio frequency (RF) energy from BPL signals on power lines does not cause harmful interference to licensed radio services. The record and our investigations indicate that BPL network systems can generally be configured and managed to minimize and/or eliminate this harmful interference potential. Our goals in developing the rules for Access BPL are to provide a framework that will both facilitate the rapid introduction and development of BPL systems and protect licensed radio services from harmful interference. Specifically, we adopted: new operational requirements for Access BPL to promote avoidance and resolution of harmful interference; new administrative requirements to aid in identifying Access BPL installations; and specific measurement guidelines and certification requirements to ensure accurate and repeatable evaluations of emissions from Access BPL and all other carrier current systems. We believe these actions will promote the development of BPL systems by removing regulatory uncertainties for BPL operators and equipment manufacturers while ensuring that licensed radio services are protected from harmful interference.

Part 15--Existing Rules

3. Carrier current systems use alternating current (AC) electric power lines to carry communications by coupling very low power RF signals onto the AC electric wiring. Traditionally, these systems have included amplitude modulated (AM) radio systems on school campuses and devices intended for the home, such as intercom systems and remote controls for electrical appliances and lamps. Carrier current systems operate on an unlicensed basis under part 15 of the Commission's rules. As a general condition of operation, part 15 devices may not cause harmful interference to authorized radio services and must accept any interference that they receive.
4. The part 15 rules for carrier current systems currently specify

radiated and conducted emission limits for devices operating below 30 MHz and above 30 MHz. Carrier current systems operating from 9 kHz to 30 MHz are subject to radiated emission limits on emissions from any part of the wiring or power network connected to the RF power source. For carrier current systems that contain their fundamental emission within the standard AM broadcast band of 535 to 1705 kHz and are intended to be received using standard AM broadcast receivers, there is no limit on conducted emissions. All other carrier current systems operating below 30 MHz are subject to a conducted emission limit only within the AM broadcast band. Carrier current devices operating above 30 MHz must meet the radiated emission limits of Sec. 15.109(a), (b) or (g) for digital devices, which are further divided into two types. Class A equipment includes devices marketed for use in a commercial, industrial or business environment, excluding devices which are marketed for use by the general public or are intended to be used in the home. Class B equipment includes devices marketed for use in a residential environment, notwithstanding use in commercial, business and industrial environments. The rules require Access BPL systems to comply with the limits for Class A or B devices depending on whether they are marketed for use in a commercial, industrial or business environment on the one hand or for use by the general public or in the home on the other. Under this Class A/Class B regime, Access BPL systems that operate on medium voltage lines external to residential environments are considered Class A devices. Carrier current devices that do not operate on frequencies below 30 MHz are subject to the general conducted emission limits below 30 MHz. The existing part 15 rules also address power line carrier systems, which are low-speed carrier current systems operating between 10 kHz and 490 kHz, used by an electric public utility entity for protective relaying, telemetry, etc., for general supervision of the power system. Because of their specialized use and operating frequency range, power line carrier systems are not subject to specific emission limits as are general carrier current systems.
5. The Commission believes that the widespread introduction of Access BPL service would further our goals for broadband service consistent with the challenges indicated. This new

[[Page 1362]]

technology offers the potential to give rise to a major new medium for broadband service delivery. Services provided on Access BPL could offer high speed Internet and data communications that compete with, complement, or extend the broadband services provided on existing media. Given the ubiquitous nature of the electric power network, Access BPL could conceivably also offer these services to virtually every element of the broadband market, including residential, institutional, and commercial users. In addition, it is possible that Access BPL could provide a means to expedite the availability of broadband Internet service to consumers and business in rural and other underserved areas. We also find that encouraging the deployment of the technology in the United States will support globalization of products

and services, promote continued U.S. leadership in broadband technology, and bring important benefits to the American public.

6. The Commission understand the significant concerns of licensed radio service users about the potential for Access BPL services to cause harmful interference to their operations. It is our intention to ensure that Access BPL operations do not become a source of harmful interference to licensed radio services. Based on extensive research, analyses, and practical experience, the Commission also continues to believe that the interference concerns of licensed radio users can be adequately addressed and that Access BPL systems will be able to operate successfully on an unlicensed, non-harmful interference basis under the part 15 model. In this regard, we find that the harmful interference potential from Access BPL systems operating in compliance with the existing part 15 emission limits for carrier current systems is low in connection with the additional rules we adopted. From the information provided by our field tests, the tests conducted by NTIA, theoretical predictions by NTIA and ARRL, and experience of the several tests of Access BPL systems, we observe that the potential for any harmful interference is limited to areas within a short distance of the power lines used by this technology. As emphasized by NTIA's Phase 1 study and comments, interference can be rapidly eliminated through various means should it occur. We pointed out to the individual amateurs commenting in this proceeding that the definition of ``harmful interference'' as used in Sec. 15.5 of the rules is set forth in Sec. 2.1 of the rules. We disagree with ARRL's position that there is no reason to act now in this proceeding and that we should delay our decision on rules for Access BPL to provide more time to develop rules to prevent this technology from causing harmful interference. As indicated, the broadband service capabilities of Access BPL systems offer important opportunities for establishing a new medium for broadband access and for introducing new competition in the broadband market. We believe that it is important to set forth rules that will promote this service now, rather than delay. In addition, the record provided in response to the Inquiry and the NPRM, including the extensive studies conducted by NTIA, is more than sufficient to assure us that the rules we adopted will adequately protect licensed services from harmful interference. While some cases of harmful interference may be possible from Access BPL emissions at levels up to the part 15 limits, we agree with NTIA that the benefits of Access BPL service warrant acceptance of a small and manageable degree of interference risk.

7. As stated in the NPRM, we believe that, on balance, the benefits of Access BPL for bringing broadband services to the public are sufficiently important and significant so as to outweigh the limited potential for increased harmful interference that may arise. Moreover, the Commission continue to believe that cases where interference may occur or where its possible occurrence would impact critical services can be addressed through additional regulatory measures. These additional measures will generally require Access BPL operators to reduce emissions or avoid operation on certain frequencies in order to

protect licensed services, to use equipment that can alter its operation by changing operating frequencies to eliminate interference, to make available information that will assist the public in identifying locations where Access BPL operations are present, and to provide notice to radio users before commencing local BPL operations. In this way, the new rules provide effective means for preventing any interference and will ensure that any instances of interference that may occur can be quickly identified and resolved. We emphasize that Access BPL systems will continue be treated as unlicensed part 15 devices and as such will be subject to the conditions that they not cause harmful interference and that they cease operation if they do cause such interference, as required by our rules. As discussed in paragraph 50, of the Report and Order, except for a few specific frequencies that are reserved for international aeronautical safety operations, we do not believe that excluding BPL operations from frequencies used by any specific service, such as the low VHF TV bands, is necessary or appropriate. Rather, we believe requiring BPL equipment to have the capability to avoid any locally used frequency is the most effective approach to ensuring that harmful interference to licensed operations is avoided.
8. The Commission is amending its part 15 rules with changes intended to facilitate the deployment of Access BPL technology while protecting licensed users of the spectrum. Specifically, we are: defining Access BPL for purposes of our rules; maintaining the existing part 15 emission limits for carrier current systems for Access BPL; requiring that Access BPL devices employ adaptive interference mitigation techniques; requiring that Access BPL system operators provide information on the areas where their systems are installed and other technical parameters in a central data base that would be accessible by the public; and adopting specific measurement guidelines for both Access BPL and other carrier current systems to ensure that measurements are made in a consistent manner and provide for repeatable results in determining compliance with our rules.

Definition of Access BPL

9. The Commission adopted a modified version of the proposed definition of Access BPL that includes changes as suggested by the commenting parties. In this regard, we agree that the definition of Access BPL should not include the low-speed power line carrier systems used by electric utilities as defined in our rules. Transmissions on these systems have very short duty cycles that pose very low interference potential as opposed to the constant operation that characterizes Access BPL. We also agree that the definition for Access BPL should limit the low frequency cut-off to above 1.705 MHz, which is the upper frequency for the AM broadcast band. We agree that the definition for Access BPL should not include power lines located within a customer's premises or within a utility's own premises. These lines generally carry low voltage power, are not under the ownership or integral control of the power service operator, are isolated from the medium voltage lines by a distribution transformer such that a bypass

device must be used to reach them with BPL signals, and pose lower potential as sources of interference because their emissions are attenuated

[[Page 1363]]

by the structure in which they are located. We also see no need to limit ownership or control of BPL operations to electric utility operators. We believe that an independent BPL provider can take the same steps and precautions as an electric utility operator in working with its equipment vendor, the power system, and licensed radio users to ensure that an Access BPL system does not cause harmful interference and to resolve any interference. We also see no need to specifically mention aerial or underground lines in the definition. Furthermore, we note that the record in this proceeding only addresses Access BPL systems operating over medium voltage and low voltage lines. Because the high voltage lines are located physically higher, can carry very high voltages, and have different configurations as well as characteristics with respect to potential harmful interference, we are excluding them from the definition for Access BPL at this time. Access BPL systems intended for high voltage lines can however operate under the requirements for experimental licensing in part 5 of the Commission rules.
10. We therefore are amending Sec. 15.3 of the rules to include the following definition for Access BPL:

Access Broadband Over Power Line (Access BPL). A carrier current system installed and operated on an electric utility service as an unintentional radiator that sends radio frequency energy on frequencies between 1.705 MHz and 80 MHz over medium voltage lines or low voltage lines to provide broadband communications and is located on the supply side of the utility service's points of interconnection with customer premises. Access BPL does not include power line carrier systems as defined in Sec. 15.3(t) of this part or In-House BPL systems as defined in Sec. 15.3(gg) of this part.

11. While we are not generally addressing rules for In-House BPL systems, except for measurement procedures, we do find it useful and appropriate to set forth a definition of such systems in the rules. As NTIA and Southern point out, specifying a definition of In-House BPL systems will fully define all forms of BPL and help to clarify the differences between Access BPL and In-House systems. We find that the definition of In-House BPL suggested by NTIA properly identifies these systems. Accordingly, we adopted the following definition for In-House BPL:

In-House Broadband Over Power Line (In-House BPL). A carrier current system, operating as an unintentional radiator, that sends radio frequency energy to provide broadband communications on frequencies between 1.705 MHz and 80 MHz over low-voltage electric power lines that are not owned, operated or controlled by an electric service provider. The electric power lines may be aerial

(overhead), underground, or inside walls, floors or ceilings of user premises. In-House BPL devices may establish closed networks within a user's premises or provide connections to Access BPL (as defined in Sec. 15.3(ff) of this part) networks, or both.

We also encourage industry efforts to develop standards for In-House BPL systems and devices that are complementary to and compatible with Access BPL operations.
12. Access BPL Systems Above 80 MHz. We agree with Corridor that Access BPL systems operating in higher regions of the spectrum, such as the Corridor Access BPL system at 5.8 GHz, should not be subject to the rules adopted herein for Access BPL systems operating in the HF and low VHF spectrum. We find that the record in this proceeding does not provide sufficient information regarding Access BPL operating in spectrum above 80 MHz, hence a decision regarding this type of Access BPL technology cannot be effectively rendered at the present time; however, Access BPL systems not covered in the above definition are subject to existing applicable part 15 rules for carrier current systems. However, we will monitor the development of Access BPL systems that operate on frequencies above 80 MHz and may consider additional requirements for Access BPL systems operating above 80 MHz in a future rulemaking if appropriate.

Emission Limits

13. General Emission Limits. The Commission continues to believe that it is appropriate to apply the existing part 15 radiated emission limits to Access BPL systems. We are not persuaded by the arguments of ARRL and others representing licensed spectrum users that the current emission limits are insufficient to limit the general interference potential of these systems. The 0 dB[mu]V/m limit suggested by the ARRL is typically below the noise floor in the HF and low VHF bands and would be unnecessarily and prohibitively restrictive for Access BPL operators. Along with NTIA, we conclude that the current emission limits will restrict Access BPL systems to very low emitted power levels in comparison to the signals of licensed radio operations. The effect of these limits will be to constrain the harmful interference potential of these systems to relatively short distances from the power lines that they occupy. In fact, in most cases the level of emissions from Access BPL systems will be at or close to the noise floor at distances beyond a hundred meters of an installed power line. We recognize that some radio operations in the bands being used for Access BPL, such as those of Amateur radio licensees, may occur at distances sufficiently close to power lines as to make harmful interference a possibility. We believe that those situations can be addressed through interference avoidance techniques by the Access BPL provider such as frequency band selection, notching, or judicious device placement; the rules we are specifying facilitate such solutions. We do not see evidence that BPL operation will significantly contribute RF energy to generally raise the background noise level. In addition, because power lines inherently can radiate significant noise emissions as noted by

NTIA and ARRL, good engineering practice is to locate sensitive receiver antennas as far as practicable from power lines. This practice will also help prevent interference from Access BPL emissions. In fact, as stated by NTIA, power line noise emissions at frequencies up to 800 MHz may actually be reduced as Access BPL systems are deployed. Furthermore, we see no need to impose a strict band-pass filtering on Access BPL, and we deny Echelon's request in this regard.

14. Although we agree with ARRL that Access BPL on overhead lines is not a traditional point-source emitter, we do not believe that Access BPL devices will cause the power lines to act as countless miles of transmission lines all radiating RF energy along their full length. First, the part 15 emission limits for carrier current systems have proven very effective at controlling interference from such systems. Also, for the reasons indicated by PPL Telcom, we believe that the design and configuration of Access BPL systems will be inconsistent with the development of cumulative emissions effects for nearby receivers. Moreover, the NTIA Phase 1 Study and our own field measurements of Access BPL installations indicate that these systems are not efficient radiators, nor are their emissions cumulative such that they permeate areas in which they are located. Rather, we find that emissions from Access BPL systems tend to dissipate after a short distance from a coupler along a line, and then remain relatively the same for some distance. Along the line there also may be multiple points where emissions may be relatively higher but within the part 15 limits. However, because the signal level decreases significantly with distance perpendicular from the line, the potential for interference also decays

[[Page 1364]]

rapidly with distance from the line. To ensure that the effects of the power line as a radiator are taken into consideration when testing for compliance with our part 15 rules, the measurement procedures we adopted for Access BPL systems, as discussed in the Report and Order, specify that emission measurements are to be made at several specific distances from the Access BPL equipment source, and that measurements are to be taken parallel to the power line to find the maximum emissions from the BPL system.

15. Notwithstanding our decision on emission limits, we do recognize that Access BPL systems present concerns for licensed users in the HF and low VHF bands, given the propagation characteristics of RF signals in the range of frequencies being used for these systems, the diversity of users of these frequencies, and the fact that Access BPL devices will be installed at many locations in an area. While we conclude, that the likelihood that interference from Access BPL operations will occur is low at the signal levels allowed under the current part 15 emission limits, such interference could occur in limited situations despite the intentions of BPL operators. Moreover, even if interference were to occur to amateur operations at the distances indicated by the ARRL, as recommended by NTIA, there are additional interference mitigation techniques that we are requiring of

BPL providers to address such interference potential. We believe that such steps should be taken, particularly in those cases where the occurrence of interference would affect critical services or where interference could be anticipated to occur.
16. We find no need to subject Access BPL equipment to a conducted emission limit that would apply for compliance measurement purposes before the equipment is shipped and installed. We note that Access BPL manufacturers already test their equipment for the proper power levels in a laboratory as part of their manufacturing procedures, and in any case, the radiated emissions from a representative model of equipment would be measured in-situ at three sites as part of the equipment authorization process. We therefore find that requiring conducted emission tests in the laboratory would be a redundant and unnecessary procedure.
17. The Class A limits are appropriate because Access BPL devices are not marketed to the general public and operate on the medium voltage power lines as commercial facilities. Those portions of Access BPL systems that operate above 30 MHz on the low-voltage power lines from the distribution transformer to a residence and all in-house wiring connected to a BPL device are subject to Class B radiated emission limits. The Class B limits are appropriate for these operations because they are located within residential environments and are marketed for use by the general public. Although Access BPL systems are required to comply with the less stringent Class A limits, operators will nonetheless have a strong incentive to exercise the utmost caution in installing and operating their systems to avoid harmful interference and ensure uninterrupted service to their customers, given that there is significant investment in the deployment of the service. We do not find that a 10 dB increase in the allowable emissions levels is warranted or desirable for systems that can reduce emissions by 40 dB in selected bands, as suggested by Satius. We believe that it is important that Access BPL systems comply with the emission limits across their entire operating range in order to minimize the potential for interference in all bands, not just those where interference may be more likely at a particular location.
18. Other Protection Measures. We agree with NTIA and the parties representing public safety agencies that critical Federal Government and other services specified by NTIA and public safety warrant additional protection. These services, including national defense, maritime distress and safety, aeronautical navigation and communications, emergency response, radioastronomy, and others provide important safety and research services whose functions would be afforded additional protection against possible interference from Access BPL operations. We agree with and adopted NTIA's approach for addressing additional protection to critical Federal Government and other radio operations. The excluded frequency bands amount only to a total of 1731 kHz, or 2% of the spectrum within the 1.7-80 MHz band. The exclusion zones are relatively few, on only the 2173.5 to 2190.5 kHz global maritime distress signaling band with prohibited distances of 1 km from coast station facilities, and 73.0-74.6 MHz band used by

the ten Very Long Baseline Array facilities of radio astronomy observatories with prohibited distances of 29 km and 11 km for Access BPL systems using overhead medium voltage power lines and other Access BPL implementations, respectively. We agree with NTIA that the potential for interference from Access BPL to the critical services in exclusion zones is somewhat greater for transmissions carried on overhead medium voltage lines than other Access BPL implementations, i.e., transmissions carried on underground lines or low voltage lines. In this regard, emissions from underground power lines are generally attenuated by the earth materials in which they are buried, while emissions from low voltage lines are generally lower because such lines are generally used only for short feeder links from a transformer to a customer service location and these lines are more closely spaced with an accompanying neutral line--and in fact are often twisted together with the neutral line. The close spacing--together with the shorter length--reduces radiated RF emissions relative to those from overhead medium voltage lines. In addition, the requirement to contact and work with the Federal Government in the 53 consultation areas is not generally expected to result in major impact on Access BPL operators' flexibility to use specific frequency bands. We therefore find that avoiding operation on the frequencies excluded under these restrictions and requirements will not be burdensome for Access BPL operators and manufacturers in order to protect distress and safety communications. Indeed, several manufacturers and Access BPL operators have indicated that they are capable of, and already do, notch out certain frequency bands. We disagree with Ameren, PLCA, and Southern that the mandatory consultation provisions imposed on Access BPL operators impose burdens on Access BPL operators not borne by other unlicensed broadband operators without countervailing benefits. For example, in part 76, we require that cable operators conduct measurements annually to ensure that signal leakage does not create interference risks. Moreover, the distributive nature and other technical characteristics of Access BPL pose somewhat higher potential for interference than point-source wireless broadband systems that warrant additional protective measures. In addition, the consultation actions will benefit Access BPL operators by leading them to select frequencies at the beginning of their service so as to avoid interference to critical services that might have to be corrected later. Accordingly, we adopted NTIA's list of consultation areas, excluded bands, and exclusion zones to which Access BPL equipment must adhere. For all other radio communication operations not addressed in these special provisions, radio operators have the opportunity to inform local BPL operators of the

[[Page 1365]]

pertinent details of their operations and BPL operators have the opportunity to apply that information as appropriate to prevent interference.

19. With regard to the consultation areas, we will require Access BPL operators to provide notification to the parties listed as Federal Government contact points, as designated in the rules, for the area in

which their systems will operate at least 30 days prior to initiation of service. The notification shall include: the name of the Access BPL provider; the frequencies of the Access BPL operation; the postal zip codes served by the Access BPL operation; the manufacturer of and type of Access BPL equipment being deployed (i.e., FCC ID); point of contact information (both telephone and e-mail address); and the proposed or actual date of initiation of Access BPL operation. We will also require that systems located in consultation areas that were in operation prior to the effective date of these rules provide this notice to the appropriate contact point within 45 days of that date. NTIA has indicated that it plans to arrange to have information made available to BPL operators on Federal Government operations. We expect parties to consult in good faith to ensure that no harmful interference is caused to licensed operations and that any constraints on BPL deployments are minimized to those necessary to avoid harmful interference.

20. As indicated in the NPRM, we believe that the risk of harmful interference to State and local public safety services, i.e., EMS, fire, law enforcement, and emergency management agencies from Access BPL operations is essentially low. In general, we believe that a properly designed and operated Access BPL system will pose little interference hazard to services such as aeronautical, maritime and public safety that are designed to operate with relatively high signal-to-noise ratios. In analyzing the potential for harmful interference to public safety systems, we took into account the fact that low-level part 15 signals from Access BPL devices attenuate rapidly as the distance from the power line increases; and that most public safety systems are designed so that mobile and portable units receive a signal level significantly above the noise floor. From an interference analysis standpoint, this latter characteristic distinguishes public safety systems from amateur radio stations using high-sensitivity receivers to receive signals from transmitters often thousands of miles away. However, it is foreseeable that under certain rare circumstances a public safety unit could: (a) Operate in close proximity to a power line carrying Access BPL transmissions at a location where field strength is near the part 15 limit; (b) be tuned to a frequency radiated by an Access BPL device; and (c) be receiving a weak signal from a distant, or obstructed, public safety base station. In general, potential harmful interference under these conditions would be limited to public safety units operating on systems using low-band VHF channels (25-50 MHz). We therefore conclude that the interference protections set forth will be adequate to foreclose harmful interference to public safety systems except perhaps under such unusual circumstances.

21. However, we also conclude that public safety systems merit additional protection because of the often critical and/or safety-of-life nature of the communications they provide. Given the importance and nature of public safety communications, we believe it is necessary to require Access BPL systems to notify the public safety agencies in their local areas, i.e., State and local police, fire, emergency medical, any special emergency coordinators, call box operators, and other entities that are eligible for public safety licenses under Sec.

90.20 of the rules. This advance notification will provide public safety operators with an opportunity to assess whether there are portions of its geographic area of responsibility about which it should make special arrangements with the Access BPL operator in order to avoid interference. Consistent with our decision on notifications for Federal Government consultation areas, we will require that this notification be provided to local public safety agencies at least 30 days prior to a system's initial operation, the activation of any major extensions of the system, or any changes in its operating characteristics, i.e., transmitting frequencies. The notification shall include: (1) The name of the Access BPL provider, (2) the frequencies of the Access BPL operation, (3) the postal zip codes served by the Access BPL operation, (4) the manufacturer of and type of Access BPL equipment being deployed (i.e., FCC ID), (5) point of contact information (both telephone and e-mail address), and (6) the proposed or actual date of initiation of Access BPL operation. We will also require that systems in operation prior to the effective date of these rules provide this notice to local public safety agencies within 45 days of that date.
22. We do not see a need to establish Access BPL-free zones around airports, military bases, hospitals, police stations and fire stations, as requested by NAC/Amherst. To the extent that these services warrant special protection, they will be afforded protection through the excluded bands, exclusion zones and consultation areas specified by NTIA. We similarly do not find that amateur radio frequencies warrant the special protection afforded frequencies reserved for international aeronautical and maritime safety operations. We note that in many instances amateur frequencies are used for routine communications and hobby activities. While we recognize that amateurs may on occasion assist in providing emergency communications, we believe that the general part 15 provisions and the specific provisions being adopted for Access BPL operations are sufficient to protect these amateur operations.

Interference Mitigation

23. We continue to believe that it is important that Access BPL systems include capabilities that allow them to modify their operations to mitigate or avoid instances of harmful interference that may arise. These capabilities will allow Access BPL system operators to resolve interference found to occur at specific locations or in specific areas of their plant in an expeditious manner and without disrupting service to their broadband service subscribers. We agree with NTIA that Access BPL operators would have strong incentives to voluntarily implement such equipment and operating practices. We also agree with NTIA that, notwithstanding these incentives, it is necessary that we adopt requirements for interference mitigation capabilities to ensure that any interference can be resolved quickly without the need to address the tension that might arise over the possible disruption of service to BPL subscribers if mitigation capabilities were not available. The concerns of those commenting parties who argue that the mitigation

requirements would not be sufficient to protect their operations from interference by BPL operations are misplaced. That protection will be provided by: (1) The emissions limits for Access BPL systems; (2) the provisions for consultation areas, excluded bands, and exclusion zones; and (3) the requirement that Access BPL systems not cause interference, as set forth above. The mitigation requirements are intended to ensure that Access BPL systems are designed with features that support interference mitigation, both during initial installation, if sensitive local communications systems are identified in advance, and after installation, when the newly required operational

[[Page 1366]]

capabilities will allow Access BPL system operators to expeditiously resolve any instances of interference that may occur, without the need to cease operations and thereby disrupt the broadband data services they provide to their subscribers.

24. Accordingly, we have adopted requirements that Access BPL systems incorporate capabilities to modify their systems' operations and performance to mitigate or avoid potential harmful interference to radio services and to deactivate specific units found to actually cause harmful interference that cannot be remedied through modification of their operations as proposed, but with certain modifications. Our approach in specifying these requirements is to provide Access BPL equipment manufacturers and operators with flexibility to design and implement a broad range of products and system designs to meet particular service and operational needs while ensuring that systems have the capabilities to make operational changes to avoid any interference that may arise. The specific provisions of the mitigation requirements and the comments that concern them are addressed below. We also see no basis for subjecting Access BPL systems to requirements for addressing interference complaints that are different and more stringent than our procedures for addressing interference from other types of unlicensed devices. In this regard, we will continue to subject Access BPL systems to the procedures of Sec. 15.5(c) of the rules. Under this rule, parties who believe they are experiencing interference from an unlicensed device are first expected to bring the matter to the attention of the operator of the unlicensed device. If that action does not resolve the interference, the party may then seek intervention by the Commission.

25. To be more specific, in the event a BPL interference complaint is filed by a licensee with the Commission, the Commission will contact the complainant and/or the BPL provider to determine if they have first attempted to resolve the interference complaint among themselves. If they have not made such an attempt, the complaint will be forwarded to the BPL provider for action and the complainant notified that they will be contacted by the BPL provider concerning their interference complaint. The Commission may periodically monitor the resolution process to ensure that the parties are working in good faith and making appropriate progress in resolving the interference complaint. If the parties have attempted to address the complaint but the matter remains

unresolved, the Commission, through its Enforcement Bureau with assistance from the Office of Engineering and Technology will review the complaint and take appropriate action. In general, the Commission will contact the BPL operator and request information on what steps they have taken to address the licensee's complaint. If these actions are deemed insufficient to resolve the interference complaint, the Commission will instruct the BPL operator to take immediate remedial actions, such as ``notching'' or avoiding specific frequencies, or ceasing operations. In specific instances, the Commission may undertake field testing and measurements to address interference complaints and determine the most appropriate remedial action.

26. Frequency Avoidance. We conclude that the most appropriate approach regarding mitigation techniques that involve altering system operation is to require that Access BPL systems incorporate the capability to avoid the use of specific frequency bands. The ability to alter a system's operation to notch-out transmissions from specific frequencies where interference is occurring is a necessary feature for resolving interference without disrupting service to BPL subscribers. While other mitigation capabilities, such as adaptive or commanded power control, are desirable system features that can serve to reduce interference potential, they generally would provide a much lower degree of benefit in eliminating interference than frequency avoidance. Limiting the requirement for operational modification capabilities to frequency avoidance is also consistent with our intent to minimize the impact of these requirements on manufacturers and system operators so as preserve their flexibility to design products and systems that will best meet the needs of Access BPL subscribers.

27. In considering specifications for the notching requirement, we find that the most important consideration is to ensure that the notch provides enough filtering to effectively reduce the potential for interference. Our experience in examining the field performance of various Access BPL operations indicates that at frequencies below 30 MHz, a notching capability that provides at least a 20 dB reduction of Access BPL emissions below the current applicable part 15 emission limits is adequate to resolve interference occurrences that might result to mobile reception from such operations. In this regard, we will generally assume that a 20 dB notch is sufficient to resolve any harmful interference that might occur to mobile operations, given the low signal levels allowed under the part 15 emission limits and the fact that a mobile transceiver can readily be re-positioned to provide some separation from the Access BPL operation. The interference potential from emissions at this low level would be limited to a very short range from an Access BPL device or a power line on which Access BPL transmissions are carried. We also believe that notching at this level with some distance separation will generally avoid interference to fixed operations, including those that use more sensitive receivers. Above 30 MHz we believe that a notching capability of at least 10 dB is sufficient to provide the same level of protection, given the more stringent part 15 emission limits that apply to Access BPL transmissions above 30 MHz and the increased attenuation of emissions

that occurs from propagation losses as the frequency of operation increases. With regard to NAS/CORF's requests for protection of radioastronomy, we note that special protections are provided for radioastronomy in the exclusion zones and consultation requirements for Access BPL.

28. We do not believe it is necessary to specify the bandwidth over which the notching capability must function. Rather, we will adopt the more general requirement that Access BPL systems must be capable of avoiding transmissions in any frequency band or bands in order to eliminate any instances of interference with the operations of licensed radio services. We therefore are amending our rules to require that Access BPL devices have the capability to reduce emissions by at least 20 dB below the part 15 emission limits in frequency bands below 30 MHz and 10 dB below those limits in frequency bands 30 MHz and above. We believe that these provisions adequately set forth the structure of the required capabilities for modifying the operation of an Access BPL system. We are not specifying requirements for use of the frequency avoidance capabilities. Rather, we believe that system operators should have the discretion to use this capability or any other alternative available to them as they might deem appropriate to resolve specific situations involving interference that they may encounter in the course of their operations.

29. We do not find any justification for a requirement that Access BPL operators notch the frequencies of any or all of those services that use frequencies in the HF and low VHF

[[Page 1367]]

bands. We believe that the emission limits, consultation areas, excluded bands, exclusion zones, and the requirement that Access BPL systems not cause interference, are generally sufficient to control the interference potential of these systems. The required notching capability will enable a system operator to address any specific instances of interference that might otherwise arise. We also decline to adopt a rule requiring transmission of identification codes. As NTIA states, such codes could increase the potential for interference from Access BPL operations. We also do not believe that it would be practicable for ARINC or any other operator to identify an Access BPL system as the source of interference and contact its operator on a real time basis to resolve the interference. As NTIA indicates in its letter of September 24, 2004, no practical method has been identified for Access BPL systems to transmit an identifying code. We believe that the Access BPL notification requirements will provide sufficient information to locate and mitigate interference.

30. Shut Down Requirement. We continue to believe that Access BPL equipment and systems should have the capability to deactivate individual system components. This feature will allow systems to deactivate limited portions of their plant so that localized interference problems can be addressed without affecting service to all of their subscribers. As a secondary benefit, the shut-down feature will allow system operators to rapidly diagnose whether their

operations are causing reported interference. We are also requiring that the shut-down feature in individual devices be remote-controllable from the central system operations facility or other appropriate location. This will allow rapid response to resolve interference in any emergency or other urgent situation that might arise. We also agree with Progress Energy the required shut-down capability should be manually controlled. Moreover, we have no record on which to base a decision on the conditions under which an automated capability would be activated. We also recognize that, depending on how it would be triggered, an automated shut-down capability could unnecessarily have detrimental effects on a power utility service's operations in addition to disrupting broadband service to its Access BPL customers.

31. It is not our intention that a service shut-down be the first step in a system operator's response to a valid interference complaint. As suggested by several of the commenting parties, we would anticipate that shut-down would be a last resort when all other efforts to satisfactorily reduce interference have failed. We disagree with Ameren that the shut-down requirement will add unnecessary costs and complexity to Access BPL equipment. As NTIA and our own field testing indicate, most Access BPL systems and equipment already include the capability to shut down specific components of their operation. Accordingly, we are requiring that Access BPL systems incorporate features that will allow the deactivation of individual components on a remote-controlled basis, to be implemented. We reiterate, however, that the Commission, through a duly authorized representative, is the sole authority that may direct an Access BPL operator to cease operating any of its devices to eliminate interference.

Access BPL Notification and Database Requirements

32. We believe that the Access BPL notification and database requirements proposed in the NPRM are appropriate and sufficient to ensure that any potential interference to licensed services from BPL operations can be adequately identified and quickly addressed. The primary intent of our notification and database requirements is to ensure that licensed users of the spectrum have a publicly accessible and centralized source of information on BPL operations to determine whether there may be Access BPL operations on particular frequencies within their local area so that any incident of harmful interference can be resolved should it occur. The information contained in the notification database need only be sufficient to determine whether there may be a BPL operation in the local area, the nature of the BPL operations, whether the BPL system is operating on frequencies that could potentially be a source of harmful interference to the licensed user and to identify an appropriate contact person who can work directly with the complainant to resolve the harmful interference if it is determined to be caused by the local BPL operations. Additional or more detailed relevant information needed by a radio operator could be requested via the contact person indicated in the data base, as appropriate.

33. We therefore are adopting rules that will require the BPL

industry to establish within July 6, 2005, a centralized publicly accessible Access BPL notification database. We note that two organizations have indicated their willingness to perform this task and that the issue of ``independence'' of the database manager has been raised by some of the commenting parties. The responsibilities and duties of the database manager are to maintain complete, accurate and timely records of FCC-mandated information. We are not requiring, as some parties have suggested, that the database manager be involved in, monitor, or manage the interference resolution process. The party responsible for avoiding interference is clearly the Access BPL operator and his responsibilities are clearly set forth in the existing procedures under Sec. 15.5(c) of the Commission rules. We therefore do not find that the database manager need be an ``independent'' third-party with no relationship to the BPL or utility industry and are not adopting such a requirement.

34. With regard to the information to be included in the database, we adopted rules that will require the Access BPL operator to provide the BPL industry designated database manager with the following information 30 days prior to initiation of any operation or service: (1) The name of the Access BPL provider; (2) the frequencies of the Access BPL operation; (3) the postal zip codes served by the specific Access BPL operation; (4) the manufacturer and type of Access BPL equipment being deployed (i.e., FCC ID); (5) point of contact information (both telephone and e-mail address) for interference inquiries and resolution; and (6) the proposed/or actual date of Access BPL operation. The database manager shall be required to enter this information into the publicly accessible database within 3 business days of receipt. This will allow some period of time for the database manager and BPL provider to address any questions with regard to information submitted and to ensure that information entered into the database is correct. We believe that the above information provides sufficient specificity for identifying potential interference while at the same time avoiding valid concerns that sensitive information on critical infrastructure not be revealed.

35. We believe that using zip codes, as suggested by Southern, would sufficiently identify the area of Access BPL deployment without revealing specific sensitive information and would facilitate a more organized approach to identification and resolution of harmful interference. We note that zip codes are easily understood and can be identified by both licensees and BPL operators. With regard to those parties that request more comprehensive information, we do not find that benefits of providing such information in the database would

[[Page 1368]]

outweigh the substantial cost of collecting and reporting this additional information. We note, for example, that NTIA's proposals to require information on modulation types, number of carriers, range of transmission duty cycle, minimum and maximum carrier spacing, symbol rates per carrier, etc., would provide little additional guidance on whether interference were being caused in a particular instance as

compared to the more simple requirement of identifying BPL operating frequencies. In addition, we are requiring that BPL equipment must be certified and therefore more detailed technical information will be available through our equipment authorization files for those parties desiring such information. We also are not requiring Access BPL operators to have multi-lingual contact persons. We believe that requiring both telephone and e-mail contact information is sufficient to address interference inquiries. We are also not requiring that telephone contact positions be staffed 24 hours per day and seven days a week. We believe that our emission requirements and other mitigation rules will ensure that interference is generally avoided. We believe that telephone contact staffing during normal business hours is sufficient and also note that e-mail would generally allow interference reports to be filed at any time.

36. We expect the Access BPL operators and licensees to cooperate in good faith to identify and resolve instances of harmful interference. We require the notification database for Access BPL operators to notify the operation of its devices and systems to facilitate the speedy resolution of interference. Speedy resolution of interference will not result if the database information on Access BPL deployments is abused and the BPL operators are deluged with frivolous interference complaints. We expect the Access BPL operators to take every complaint of interference seriously and to diagnose the possible cause of interference quickly. At the same time, we expect the complainant to have first taken reasonable steps to confirm that interference rather than a receiver system malfunction is occurring and, to the extent practicable, to determine that the interference source is located outside the complainant's premises. We expect both parties to cooperate to determine a mutually acceptable schedule to diagnose and resolve the interference complaint, recognizing that the Access BPL operator may have to prioritize any complaints of interference that it receives (e.g., from a public safety agency). With regard to public safety operations, however, we will require that the BPL operator respond to complaints of harmful interference from public safety users within 24 hours; the BPL provider shall be required to immediately cease the operations causing the public safety complaint if it fails to respond to such complaint within 24 hours. Any complaints of interference that are not resolved in accordance with the mutually agreed schedule may be filed with the Commission along with the particulars of the interference case. Upon receipt of the interference complaint, the Commission will investigate the complaint and take action against the Access BPL operator if it is found to be causing harmful interference. If, on the other hand the Commission uses its resources to investigate an interference complaint that is found to be frivolous, the Commission will impose appropriate sanctions for abuse of its administrative process.

Measurement Guidelines

Access BPL Systems

37. We find the extensive measurement and modeling efforts presented in the NTIA Phase 1 Study and the Technical Appendix to NTIA's comments to be highly useful in our efforts to develop appropriate measurement procedures for Access BPL. The scientific engineering in those submissions clarifies the interference potential of Access BPL on radio reception and the recommended techniques for measurement of Access BPL emissions provide us with a well thought-out plan on which to base our decisions on measurement issues. Our decision, takes into account NTIA's research and adopts a modified version of its recommendations.
38. We find that our proposed measurement procedure for testing Access BPL systems including the presence and testing of all of their electronic components to be reasonable as each component is part of the Access system of that installation. We do not agree with Southern that the testing should be limited to three representative signal injection points. Southern believes that the highest levels of emissions on overhead systems are found at the signal injection point, and it states that the biggest variable affecting emissions is impedance mismatch between the signal injection system and the power system at the point of injection, which could be a coupler or a repeater. We agree with Southern that each injection point affects the radiated emissions. However, Southern's suggestion of selecting only representative signal injection points precludes the presence of other components, e.g., booster, concentrator, extractor, etc. if they should be together at an installation to make up the complete Access BPL system. Our requirement for a typical installation takes into account the topology of the power lines and of all Access BPL devices at that installation, thus choosing only representative injection points, as Southern recommends, does not cover the installation as a whole. Accordingly, we will keep our proposed in-situ requirements for including and testing all components of an Access BPL system. We also find that our measurement procedure for testing Access BPL systems in-situ at three typical underground locations along a number of radials consistent with testing other part 15 carrier current devices. The selection of three typical underground installations is a streamlined procedure, compared to testing each and every installation, as recommended by some parties; therefore we do not agree with Main.Net that only one underground location should be tested. We discuss below the issues with respect to measuring radiated emissions from Access BPL systems on overhead power lines.
39. Measurement Distance. Despite the stated aversion of NTIA and ARRL to distance extrapolation, we recognize that at many in-situ test locations, it may not be possible or practicable to measure at the proposed fixed distances of 10 and 3 meters. If a 10-meter distance places the measurement antenna on a roadway, safety may dictate increasing the distance to, e.g., 14 meters in order to position the testers out of harm's way. Hence, we expect that distance extrapolation will be necessary for in-situ testing. We note that NTIA's latest computer modeling results show that the variation of field strength with distance is consistent with the existing part 15 distance extrapolation when used with the slant range distance to the power line as was proposed in Appendix C of the NPRM. We also note that although

the ARRL and ARINC recommend the use of a 20 dB per decade extrapolation factor rather than the existing 40 dB per decade in part 15 for frequencies below 30 MHz, Ameren states that it has determined the characteristics of the fields near the line support the case for assuming a 40 dB per decade decay rate of the field away from the line and recommends the use of the existing 40 dB per decade extrapolation factor. Given the lack of conclusive

[[Page 1369]]

experimental data pending large scale Access BPL deployments, we will continue the use of the existing part 15 distance extrapolation factors in our rules, but with the slant range rather than horizontal distance. If new information becomes available that alternative emission limit/distance standards or extrapolation factors would be more appropriate, we will revisit this issue at another time.

40. Receive Antenna Height and Correction Factor. NTIA expresses a possible need for ``adjustments'' to measured data due to three factors: (1) Effect of antenna height, (2) effect of distance (extrapolation methods), and (3) effect of using an H-field sensing antenna to predict E-fields in the near-field region. However, NTIA initially provided a specific recommendation regarding only one of these issues--correction for the effect of antenna height. Our modeling suggests that there is a linkage between these factors. We believe that all three areas must be considered together in order to develop appropriate measurement procedures. Furthermore, NTIA's recommendation for a 5 dB correction factor is based on a constant measurement antenna height of 1 meter. On the other hand, for frequencies above 30 MHz, our current measurement guidelines require varying the receive antenna height from 1 to 4 meters, hence higher peaks at a higher antenna height would be found with our test procedure, obviating the need for a height correction factor at those frequencies. However, we recognize that NTIA's method of keeping the antenna height constant and applying a height correction factor is aimed at simplifying the measurement procedure; hence, this might be an alternative testing procedure that BPL providers may actually prefer. The Commission's rules have historically allowed the use of alternative methods for compliance measurements, based on good engineering practices. In deference to NTIA's extensive work culminating in the NTIA recommendations in this proceeding, we will adopt NTIA's recommendations for antenna height and correction factor as an alternative method within the measurement guidelines of Appendix C of the Report and Order. We note however that the methods are mutually exclusive, i.e., the BPL tester must choose either the NTIA alternative method or the FCC method, and cannot mix and match the two.

41. Type of Antenna Used for Testing. Given NTIA's concurrence with the use of a magnetic loop antenna for emission measurements below 30 MHz and electric field sensing antennas above 30 MHz, we are adopting our proposal to use these antenna types in Access BPL emission measurements. This decision is consistent with the use of such antennas for testing other types of part 15 devices.

42. Effects of Power Lines on the Radiated Emissions of a BPL Device. We are concerned that NTIA's recommendation for performing field strength measurements all along a 1200-meter section of the connected power line wiring would be difficult and burdensome for Access BPL system operation. In this regard, we note that such a process could be time-consuming and would require many individual measurements, when power wiring may be many miles long, and the interval between measurements may have to be a small fraction of a wavelength in order to ensure that the true peak is captured. It is clear from the modeling results presented by NTIA that the maximum emission from the system often occurs further down-line from the coupler than the one-wavelength maximum distance proposed in Appendix C of the NPRM. However, it is also clear from the NTIA data that the true maximum is not significantly larger than the maximum that would be found over the limited search space that we proposed. We understand the concerns of Ameren, Southern, and other BPL providers regarding an overly large number of necessary measurements, which could increase the costs of compliance testing. We therefore believe that the approach in our proposed measurement guidelines strikes an appropriate balance in avoiding a potentially very large number of measurements by allowing the use of the mid-band frequency in determining measurement distances down-line for a given frequency band of operation. We also note that, at each of the five specified down-line points, measurements must be made at all operating frequencies of the Access BPL device, in order to find the peaks.

43. We concur with NTIA's recommendation that measurements be made sequentially with the Access BPL devices operating at all frequencies at which they are capable. This is consistent with existing part 15 requirements, and with our proposed measurement guidelines. It is important that radiated emissions be measured at all operating frequencies to find the peaks. We also concur with NTIA's recommendation that measurements be made using the maximum possible BPL device output power and operational duty factor. We disagree with Progress Energy that emission measurements should be performed with the Access BPL equipment power levels set for normal operations at that site, and not at the maximum levels. Testing at the BPL maximum output power and operational duty factor is necessary to ensure identification of the maximum field strength that the device is capable of generating. The measurement report and operating instructions must clearly state the maximum output power and duty factor settings necessary to certify that the installed device will comply with our limits. However, because the same device might be used on either overhead or underground power lines having different radiating properties, we are not requiring that the device be modified to prevent operation at higher power levels and duty cycle settings. Furthermore, Access BPL devices must comply with our limits upon power-up following a fault condition, or during a start-up operation after a shut-off procedure, by the use of a non-volatile memory, or some other method, to immediately restore previous settings with programmed notches and excluded bands. This is necessary to avoid the situation where programmed protection schemes, such as

excluded bands and notches, have to be restored manually, thus leaving protected licensed services vulnerable during the time delay caused by a manual re-programming procedure.

44. Based on the foregoing, we believe that our proposed measurement guidelines that require selection of fractional wavelengths based on mid-band frequency for down-line measurements strike an appropriate balance between the need to ensure compliance with the rules and practical considerations of the burden and degree of measurement difficulty placed on system operators, and that our requirements for testing at maximum output power and operational duty factor and requirement for clear identification of maximum compliant operating levels will ensure that devices comply under all conditions. Accordingly, we are adopting the measurement guidelines in Appendix C of the NPRM, modified to incorporate some of NTIA's recommendations, as discussed in the Report and Order.

45. Selection of Representative Installations. Although we concur with NTIA that the selection of typical Access BPL installations for in-situ measurements must be made in a careful manner, taking into account the various configurations of the power lines to select a typical, representative installation, we will not require specific criteria for site selection process, because this may limit the number of test sites which may actually be more typical in a specific provider's service area than those recommended by NTIA.

[[Page 1370]]

We find that our proposed guidelines for three typical overhead installations and three typical underground installations are reasonable to cover a number of test sites in deployment. We also find that by requiring Access BPL devices to be certified by the equipment manufacturer, the concerns of Progress Energy regarding Access BPL installation sites with multiple vendors' equipment no longer exist because the responsibility for site selection to test for equipment certification purposes rests with the Access BPL manufacturer and not with the utility. We are however recommending that the utility operator verify that each representative Access BPL site complies following the installation of a separately certified Access BPL equipment. In such cases, the selection of the test site should be based on the characteristics of the installation and not on vendor's equipment types. Additionally, we concur with Southern and UPLC that NTIA's recommendation in the NTIA Phase 1 Study of requiring a representative power line of 600 meters devoid of discontinuities is impractical, because of the difficulty of finding such a line. Accordingly, in the absence of more specific input, we will not require the selection of such a specific type of power line.

46. Other requirements. We find that NTIA's recommendations regarding the various reporting requirements for the test report are satisfied by our adoption of the certification procedure for Access BPL equipment authorization. Information regarding the test conditions, spectrum distribution and other relevant technical specifications will be required in the certification report for the equipment, which will

be accessible through our equipment authorization database. We further find that NTIA's recommendation to embody requirements such as measurement distance, measurement bandwidth, etc. directly into the rules and not merely as guidelines, would not be consistent with our current practice of including measurement specifications in a separate guideline.

In-House Carrier Current Systems

47. We note that although CISPR is continuing to work on addressing emission issues that will apply to In-House BPL, no final recommendation has been adopted. We also note that most commenters in this proceeding address Access BPL, and not In-House BPL, issues. Measurements along the service wire leading to the house have been proposed because this wire can be one of the conduits for radiation coming from In-House BPL devices. We are sympathetic to HomePlug's concerns, however. To address HomePlug's concerns, we will allow measurements to be made at three different points along the wire, where the highest radiated emissions are found; these points would not need to be associated with specific wavelengths of the device's operating frequencies, if the installation under test does not include a service wire with a sufficient length for the required measurements. Moreover, testing is required on only one side of the service wire because radiation is nearly symmetrical on either side of the wire. The test report must provide documentation explaining the test configuration. As for the required clear space along the service wire, the guidelines do allow the test to be performed at 3 meters with a distance extrapolation factor when a 10-meter clearance is not available, hence we would expect that most residence configurations would not pose any clearance problem. Accordingly, we partially grant HomePlug's request and hereby adopt the guidelines for In-House BPL and all other in-house types of carrier current systems in Appendix C of this Report and Order.

Equipment Authorization

48. Upon careful consideration of the record, we find that Access BPL systems are not typical unintentional radiators, and that emission measurements for such systems in-situ are critical in determining their interference potential. We are persuaded by NTIA that the newness of the Access BPL measurement procedures warrants review of measurement reports. We therefore conclude that the Certification procedure is appropriate for this new technology to allow us to maintain oversight until additional operational experience is obtained from its wide deployment. While we appreciate NTIA's concerns for assigning responsibility with respect to Access BPL compliance, we do not find that the operator, rather than the Access BPL equipment manufacturer, should bear the burden of the certification requirement. Since a system operator does not control the manufacture of the equipment, it will not be in a position to control production to ensure that each unit marketed conforms to the unit tested for compliance. We believe that

the legal and business relationship between the system operator and the BPL manufacturer will be sufficient to ensure that Access BPL equipment installed on a power line be in compliance with our rules. We do, however, strongly recommend that operators perform initial installation and subsequent periodic testing on their systems in order to ensure that the systems maintain compliance with our emission limits.

49. Based on the foregoing, we are subjecting Access BPL to the certification procedure to be carried out by the equipment manufacturer. We are also clarifying that we are retaining the verification procedure for all carrier current systems other than Access BPL, because the verification procedure has been adequate to ensure that other types of carrier current systems comply with the part 15 rules.

50. We also specify that Access BPL certification will be initially performed by the Commission. In General Docket No. 98-68, we established the requirements for Telecommunication Certification Bodies (TCBs) that are allowed to approve equipment in the same manner as the Commission. In that proceeding, we stated that while we intended to use TCBs to certify a broad range of equipment, we found that certain functions should continue to be performed by the Commission. The functions included certifying new or unique equipment for which the rules or requirements do not exist or for which the application of the rules is not clear. Because Access BPL is a new technology and many questions about the application of the rules may arise, we believe that TCBs should not be permitted to certify Access BPL systems or approve permissive changes to Access BPL systems until the Chief of the Office of Engineering and Technology acting under the existing delegated authority announces that TCBs may certify Access BPL systems.

Miscellaneous

51. Transition Period and Grandfathering of Existing Access BPL Equipment. We note that the major differences between the existing part 15 rules for carrier current systems and the newly adopted rules in subpart G for Access BPL are (1) the type of equipment authorization procedure--Verification for existing carrier current systems, Certification for Access BPL systems; (2) the requirement for interference mitigation techniques and avoidance of excluded bands and exclusion zones for Access BPL systems; and (3) the requirement for an Access BPL database concurrent with consultation with licensed spectrum users. Insofar as existing deployed Access BPL systems can satisfy (2) and (3) by working with licensed spectrum users to avoid co-channel operations, and by being listed in the Access BPL database, the requirements of (1) can be satisfied by having compliance test data

[[Page 1371]]

available for inspection during the transition period. We clarify that after the transition period, all Access BPL devices that are manufactured, imported, marketed or installed shall comply with the requirements specified in subpart G of part 15, including certification

of the equipment.
52. We believe that it would be an undue burden on those operators who have deployed Access BPL systems to require their systems to come into compliance with the rules adopted herein, as long as the deployed equipment does not cause harmful interference and the operator takes the necessary steps to eliminate occurrences of harmful interference. We agree with Progress Energy that once a system has been installed and is operating within the limits and requirements in place when it was installed, the system should be allowed to remain in operation. We will, of course, require that all Access BPL systems and equipment comply with the non-interference rule of part 15, that is, there is not transition period for compliance with the emission limits, which we are not changing. We find that Access BPL equipment should be allowed a transition period for compliance with new rules, in the manner that we typically provide for other part 15 devices. This will minimize economic hardships on manufacturers by allowing them, during the transition period, to continue producing and selling existing equipment while modifying their products to meet the new requirements. If an Access BPL device does not cause harmful interference, it can continue to operate until its natural replacement, unless the equipment is subsequently modified, at which time it must be brought into compliance with the new rules. We believe that a transition time frame of 18 months is adequate as this represents the typical high tech equipment life cycle. Accordingly, we are adopting a cut-off date of 18 months from the date of publication of this Report and Order. All Access BPL devices that are manufactured, imported, marketed or installed July 7, 2006 shall comply with the requirements specified in subpart G of this part, including certification of the equipment. Access BPL equipment manufactured, imported, marketed and installed prior to this date shall comply with the requirements that were in effect immediately prior to the effective date of this Report and Order.
53. Separate Rule Part for Access BPL Systems. NTIA and IEEE 802.18 advocate the creation of a new, dedicated rule part or a separate subpart of part 15 for Access BPL systems, because many of the adopted rules will be unique to Access BPL. We find that the complete separation of the rules for Access BPL equipment from part 15 inadvisable due to possible confusion and repetition of requirements in two places, as Access BPL equipment must comply with the general requirements for unlicensed devices of subparts A-C of the existing part 15 rules. We do, however, find that requirements specific to Access BPL equipment warrant the creation of a separate subpart of part 15. Accordingly, we are adding subpart G to part 15 of our rules which will contain unique requirements for Access BPL equipment, with cross reference to other applicable subparts.
54. Motions and Requests. We have received several motions and requests for additional extensions of time and for reiteration of proposals to take into account information added to the record since the NPRM. We are generally considering the substance of these motions and requests as filed comments, and denying the specific procedural remedies requested, as they offer no new information or arguments

sufficient to justify procedural delays, nor do they raise issues beyond those already explicitly or implicitly included in the record and capable of full consideration in this Order.

Final Regulatory Flexibility Analysis

55. As required by the Regulatory Flexibility Act (``RFA''),\1\ an Initial Regulatory Flexibility Analysis (``IRFA'') was incorporated in the Notice of Proposed Rule Making (``NPRM'') in this proceeding, ET Docket Nos. 04-37 & 03-104. The Commission sought written public comment on the proposals in the NPRM, including comment on the IRFA. This Final Regulatory Flexibility Analysis (``FRFA'') conforms to the RFA.\2\

\1\ See 5 U.S.C. 603. The RFA, see 5 U.S.C. 601-612, has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Pub. L. 104-121, Title II, 110 Stat. 857 (1996).
\2\ See 5 U.S.C. 604.

A. Need for, and Objectives of, the Report and Order

56. By this action, the Commission amends part 15 of the rules for radio frequency (RF) devices regarding Access Broadband over Power Line (Access BPL), a new type of carrier current system that operates on an unlicensed basis under part 15. Access BPL systems use existing electrical power lines as a transmission medium to provide high-speed communications capabilities by coupling RF energy onto the power line. Given that power lines reach virtually every residence and business in every community and geographic area in this country, Access BPL service could be made available nearly everywhere. This new broadband delivery medium could also serve to introduce additional competition to existing cable, DSL, and other broadband services. At the same time, we recognize the concerns of authorized radio services in both the private and government sectors for the need to ensure that RF energy from BPL signals on power lines does not cause harmful interference to licensed radio services. Our goals in developing the rules for Access BPL therefore are to provide a framework that will both facilitate the rapid introduction and development of BPL systems and protect licensed radio services from harmful interference. Specifically, we adopted in the Report and Order: (1) New operational requirements for Access BPL to promote avoidance and resolution of harmful interference, (2) new administrative requirements to aid in identifying Access BPL installations; and (3) specific measurement guidelines and certification requirements to allow accurate and repeatable evaluations of emissions from Access BPL and all other carrier current systems. These actions will further the development of BPL systems by removing regulatory uncertainties for BPL operators and equipment manufacturers and facilitate the continued deployment of these new broadband networks while ensuring that licensed radio services are protected from harmful interference. The record and our investigations indicate that BPL

network systems can generally be configured and managed to minimize and/or eliminate this interference potential.

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

57. No comments were filed in response to the IRFA.

C. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

58. The RFA directs agencies to provide a description of, and, where feasible, an estimate of, the number of small entities that may be affected by the rules adopted herein.\3\ The RFA generally defines the term ``small entity'' as having the same meaning as the terms ``small business,'' ``small organization,'' and ``small governmental jurisdiction.'' \4\ In addition, the term

[[Page 1372]]

``small business'' has the same meaning as the term ``small business concern'' under the Small Business Act.\5\ A ``small business concern'' is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).\6\

\3\ 5 U.S.C. 604(a)(3).
\4\ 5 U.S.C. 601(6).
\5\ 5 U.S.C. 601(3) (incorporating by reference the definition of ``small-business concern'' in the Small Business Act, 15 U.S.C. 632). Pursuant to 5 U.S.C. 601(3), the statutory definition of a small business applies ``unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the Federal Register.''
\6\ 15 U.S.C. 632.

---

59. The rules adopted in the Report and Order pertain to manufacturers of unlicensed communications devices. The appropriate small business size standard is that which the SBA has established for radio and television broadcasting and wireless communications equipment manufacturing. This category encompasses entities that primarily manufacture radio, television, and wireless communications equipment.\7\ Under this standard, firms are considered small if they have 750 or fewer employees.\8\ Census Bureau data for 1997 indicate that, for that year, there were a total of 1,215 establishments \9\ in this category.\10\ Of those, there were 1,150 that had employment under 500, and an additional 37 that had employment of 500 to 999. The percentage of wireless equipment manufacturers in this category is

approximately 61.35%,\11\ so the Commission estimates that the number of wireless equipment manufacturers with employment under 500 was actually closer to 706, with an additional 23 establishments having employment of between 500 and 999. Given the above, the Commission estimates that the great majority of wireless communications equipment manufacturers are small businesses.

\7\ NAICS code 334220.
\8\ Id.
\9\ The number of ``establishments'' is a less helpful indicator of small business prevalence in this context than would be the number of ``firms'' or ``companies,'' because the latter take into account the concept of common ownership or control. Any single physical location for any entity is an establishment, even though that location may be owned by a different establishment. Thus, the numbers given may reflect inflated numbers of businesses in this category, including the numbers of small businesses. In this category, the Census breaks-out data for firms or companies only to give the total number of such entities for 1997, which was 1,089.

\11\ Id. Table 5, ``Industry Statistics by Industry and Primary Product Class Specialization: 1997.''

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

60. Although a large number of part 15 radio frequency devices are already required to be authorized under the Commission's Certification, Declaration of Conformity, or Verification procedures as a prerequisite to marketing and importation, the adopted rules add a slight amount of new testing and reporting requirements, to ensure protection of licensed spectrum users from harmful interference. These requirements include the proposed technical requirement for adaptive interference mitigation capabilities and the proposed notification of Access BPL systems in a database similar to the one required for existing Power Line Carrier systems. The major differences between the existing part 15 rules for carrier current systems and the newly adopted rules in subpart G for Access BPL are (1) the type of equipment authorization procedure,--Verification for existing carrier current systems, Certification for Access BPL systems; (2) the requirement for interference mitigation techniques and avoidance of excluded bands and exclusion zones for Access BPL systems; and (3) the requirement for an Access BPL database concurrent with consultation with licensed spectrum users. Because Access BPL systems operate in the High Frequency (HF) and in the low Very High Frequency (VHF) of the spectrum, they must co-exist with numerous private and governmental authorized radio services. As such, they present concerns for these licensed users, given the

propagation characteristics of radio frequency signals in these ranges of frequencies, the diversity of users of these frequencies, and the fact that Access BPL devices will be installed at many locations in an area, primarily over unshielded power lines. However, the record and our own investigations indicate that BPL network systems can generally be configured and managed to minimize and/or eliminate this interference potential, through the use of consultation with licensed services and identification of installed Access BPL equipment in a database, as well as the adoption of precise measurement procedures. The adopted certification procedure for Access BPL systems will therefore help provide a more detailed record of their characteristics toward this objective.

61. Although the adopted rules do somewhat increase the reporting and recordkeeping requirements for Access BPL systems, the benefit of ensuring protection to critical systems operated by law enforcement groups, government users and emergency operations outweighs this small cost that will permit the growth of Access BPL in the shared spectrum.

E. Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

62. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives: (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

63. In the Report and Order, we maintained the existing part 15 emission limits, which are applicable to all part 15 devices, including BPL. We have adopted new measurement guidelines for BPL and existing carrier current systems, to assist manufacturers and testing entities to follow clearer and more precise measurement procedures in the testing of BPL and carrier current systems (CCS), which will help in eliminating confusion and repetitive and costly compliance testing. Although we changed the equipment authorization procedure from Verification to Certification for Access BPL systems, this is because Access BPL systems operate in a different environment than other unlicensed part 15 devices and to avoid overburdening the information that would otherwise be required to be submitted into the Access BPL database. We have adopted a simple Access BPL database format for the notification of Access BPL systems, rather than a complex one with all-inclusive and more comprehensive information. We have narrowed down the list of absolutely necessary licensed entities that Access BPL providers must consult with prior to operating in their bands, as well as the list of exclusion zones and excluded frequency bands in which Access BPL are prohibited from operating. We have provided a generous time frame for a transition period, thus allowing existing systems to

continue to operate, as long as they do not cause harmful interference to other authorized radio services. Finally, the rules will

[[Page 1373]]

apply equally to large and small entities. Therefore, there is no inequitable impact on small entities.
64. We believe that the rules adopted are equitable, balancing the critical needs of licensed radio users for protection against harmful interference, with facilitating the development of Access BPL by removing regulatory uncertainties. For the reasons stated we find that the rule changes contained in this Report and Order will not present a significant economic burden to small entities.

Report to Congress

65. The Commission will send a copy of the Report and Order, including this FRFA, in a report to Congress pursuant to the Congressional Review Act.\12\ In addition, the Commission will send a copy of the Report and Order, including the FRFA, to the Chief Counsel for Advocacy of the SBA.\13\

\12\ See 5 U.S.C. 801(a)(1)(A).
\13\ See 5 U.S.C. 604(b).

Ordering Clauses

66. Pursuant to the authority contained in Sections 4(i), 301, 302, 303(e), 303(f), and 303(r) of the Communications Act of 1934, as amended, 47 U.S.C. Sections 154(i), 301, 302, 303(e), 303(f), and 303(r), part 15 of the Commission's Rules are amended, as specified in Appendix B in the Report and Order, effective 30 days after Federal Register publication, except for Sec. Sec. 15.615(a) through (e) which contains information collection requirements that are not effective until approved by the Office of Management and Budget. The FCC will publish a document in the Federal Register announcing the effective date for those sections.
67. The Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, shall send a copy of this Report and Order, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR Part 15

Communications equipment, Radio.

Federal Communications Commission.
William F. Caton,
Deputy Secretary.

Rule Changes

0
For the reasons set forth in the preamble, the Federal Communications Commission amends 47 CFR part 15 as follows:

PART 15--RADIO FREQUENCY DEVICES

0
1. The authority citation for part 15 continues to read as follows:

Authority: 47 U.S.C. 154, 302, 303, 304, 307 and 544A.

0
2. Section 15.3 is amended by adding paragraphs (ff) and (gg) to read as follows:

Sec. 15.3 Definitions.

* * * * *
(ff) Access Broadband over Power Line (Access BPL). A carrier current system installed and operated on an electric utility service as an unintentional radiator that sends radio frequency energy on frequencies between 1.705 MHz and 80 MHz over medium voltage lines or over low voltage lines to provide broadband communications and is located on the supply side of the utility service's points of interconnection with customer premises. Access BPL does not include power line carrier systems as defined in Sec. 15.3(t) or In-House BPL as defined in Sec. 15.3(gg).
(gg) In-House Broadband over Power Line (In-House BPL). A carrier current system, operating as an unintentional radiator, that sends radio frequency energy by conduction over electric power lines that are not owned, operated or controlled by an electric service provider. The electric power lines may be aerial (overhead), underground, or inside the walls, floors or ceilings of user premises. In-House BPL devices may establish closed networks within a user's premises or provide connections to Access BPL networks, or both.

0
3. Section 15.15 is amended by revising paragraph (b) to read as follows:

Sec. 15.15 General technical requirements.

* * * * *
(b) Except as follows, an intentional or unintentional radiator must be constructed such that the adjustments of any control that is readily accessible by or intended to be accessible to the user will not cause operation of the device in violation of the regulations. Access BPL equipment shall comply with the applicable standards at the control adjustment that is employed. The measurement report used in support of an application for Certification and the user instructions for Access BPL equipment shall clearly specify the user-or installer-control settings that are required for conformance with these regulations.
* * * * *

0
4. Section 15.31 is amended by revising paragraph (f)(5), to read as follows:

Sec. 15.31 Measurement standards.

* * * * *
(f) * * *
(5) Measurements shall be performed at a sufficient number of radials around the equipment under test to determine the radial at which the field strength values of the radiated emissions are maximized. The maximum field strength at the frequency being measured shall be reported in the equipment authorization report. This paragraph shall not apply to Access BPL equipment on overhead medium voltage lines. In lieu thereof, the measurement guidelines established by the Commission for Access BPL shall be followed.
* * * * *

0
5. Section 15.37 is amended by adding paragraph (m) to read as follows:

Sec. 15.37 Transition provisions for compliance with the rules.

* * * * *
(m) All Access BPL devices that are manufactured, imported, marketed or installed on or after July 7, 2006, shall comply with the requirements specified in subpart G of this part, including certification of the equipment.

0
6. Section 15.101 is amended by revising the table in paragraph (a) to read as follows:

Sec. 15.101 Equipment authorization of unintentional radiators.

(a) * * *

Type of device	Equipment authorization required
TV broadcast receiver	Verification.
FM broadcast receiver	Verification.
CB receiver	Declaration of Conformity or Certification.
Superregenerative receiver	Declaration of Conformity or Certification.

0
7. Part 15 is amended by adding a new Subpart G, to read as follows:

Subpart G--Access Broadband Over Power Line (Access BPL)

Sec.
15.601 Scope.
15.603 Definitions.
15.605 Cross reference.
15.607 Equipment authorization of Access BPL equipment.
15.609 Marketing of Access BPL equipment.
15.611 General technical requirements.
15.613 Measurement procedures.
15.615 General administrative requirements.

Sec. 15.601 Scope.

This subpart sets out the regulations for Access Broadband over
Power Line (Access BPL) devices operating in the 1.705-80 MHz band over
medium or low voltage lines.

Sec. 15.603 Definitions.

(a) Excluded Band: A band of frequencies within which Access BPL
operations are not permitted.

(b) Exclusion Zone: A geographical area within which Access BPL operations are not permitted in certain frequency bands.
(c) Consultation. The process of communication between an entity operating Access BPL and a licensed public safety or other designated point of contact for the purpose of avoiding potential harmful interference.
(d) Consultation area: A designated geographical area within which consultation with public safety users or other designated point of contact is required before an Access BPL may be operated at designated frequencies.
(e) Low Voltage power line. A power line carrying low voltage, e.g., 240/120 volts from a distribution transformer to a customer's premises.
(f) Medium Voltage power line. A power line carrying between 1,000 to 40,000 volts from a power substation to neighborhoods. Medium voltage lines may be overhead or underground, depending on the power grid network topology.
(g) Access BPL Database. A database operated by an industry-sponsored entity, recognized by the Federal Communications Commission and the National Telecommunications and Information Administration (NTIA), containing information regarding existing and planned Access BPL systems, as required in Sec. 15.615(a) of this chapter.

Sec. 15.605 Cross reference.

(a) The provisions of subparts A and B of this part apply to Access BPL devices, except where specifically noted. The provisions of subparts C through F of this part do not apply to Access BPL devices except where specifically noted.
(b) The requirements of this subpart apply only to the radio circuitry that is used to provide carrier current operation for the Access BPL device. Other aspects of the operation of an Access BPL device may be subject to requirements contained elsewhere in this chapter. In particular, an Access BPL device that includes digital circuitry that is not used solely to enable the operation of the radio frequency circuitry used to provide carrier current operation also is subject to the requirements for unintentional radiators in subpart B of this part.

Sec. 15.607 Equipment authorization of Access BPL equipment.

Access BPL equipment shall be subject to Certification as specified in Sec. 15.101.

Sec. 15.609 Marketing of Access BPL equipment.

The marketing of Access BPL equipment must be directed solely to parties eligible to operate the equipment. Eligible parties consist of AC power line public utilities, Access BPL service providers and associates of Access BPL service providers. The responsible party, as defined in Sec. 2.909 of this chapter, is responsible for ensuring that the equipment is marketed only to eligible parties. Marketing of

the equipment in any other manner may be considered grounds for revocation of the grant of certification issued for the equipment.

Sec. 15.611 General technical requirements.

(a) Conducted emission limits. Access BPL is not subject to the conducted emission limits of Sec. 15.107.
(b) Radiated emission limits. (1) Medium voltage power lines. (i) Access BPL systems that operate in the frequency range of 1.705 kHz to 30 MHz over medium voltage power lines shall comply with the radiated emission limits for intentional radiators provided in Sec. 15.209.
(ii) Access BPL systems that operate in the frequency range above 30 MHz over medium voltage power lines shall comply with the radiated emission limits provided in Sec. 15.109(b).
(2) Low voltage power lines. Access BPL systems that operate over low-voltage power lines, including those that operate over low-voltage lines that are connected to the in-building wiring, shall comply with the radiated emission limits provided in Sec. 15.109(a) and (e).
(c) Interference Mitigation and Avoidance. (1) Access BPL systems shall incorporate adaptive interference mitigation techniques to remotely reduce power and adjust operating frequencies, in order to avoid site-specific, local use of the same spectrum by licensed services. These techniques may include adaptive or ``notch'' filtering, or complete avoidance of frequencies, or bands of frequencies, locally used by licensed radio operations.
(i) For frequencies below 30 MHz, when a notch filter is used to avoid interference to a specific frequency band, the Access BPL system shall be

[[Page 1375]]

capable of attenuating emissions within that band to a level at least 20 dB below the applicable part 15 limits.
(ii) For frequencies above 30 MHz, when a notch filter is used to avoid interference to a specific frequency band, the Access BPL system shall be capable of attenuating emissions within that band to a level at least 10 dB below the applicable part 15 limits.
(2) Access BPL systems shall comply with applicable radiated emission limits upon power-up following a fault condition, or during a start-up operation after a shut-off procedure, by the use of a non-volatile memory, or some other method, to immediately restore previous settings with programmed notches and excluded bands, to avoid time delay caused by the need for manual re-programming during which protected services may be vulnerable.
(3) Access BPL systems shall incorporate a remote-controllable shut-down feature to deactivate, from a central location, any unit found to cause harmful interference, if other interference mitigation techniques do not resolve the interference problem.

Sec. 15.613 Measurement procedures.

Compliance measurements for Access BPL shall be made in accordance with the Guidelines for Access BPL systems specified by the Commission.

Sec. 15.615 General administrative requirements.

(a) Access BPL Database. Entities operating Access BPL systems shall supply to an industry-recognized entity, information on all existing Access BPL systems and all proposed Access BPL systems for inclusion into a publicly available data base, within 30 days prior to initiation of service. Such information shall include the following:
(1) The name of the Access BPL provider.
(2) The frequencies of the Access BPL operation.
(3) The postal zip codes served by the specific Access BPL operation.
(4) The manufacturer and type of Access BPL equipment and its associated FCC ID number, or, in the case of Access BPL equipment that has been subject to verification, the Trade Name and Model Number, as specified on the equipment label.
(5) The contact information, including both phone number and e-mail address of a person at, or associated with, the BPL operator's company, to facilitate the resolution of any interference complaint.
(6) The proposed/or actual date of Access BPL operation.
(b) The Access BPL database manager shall enter this information into the publicly accessible database within three (3) business days of receipt.
(c) No notification to the Commission is required.
(d) A licensed spectrum user experiencing harmful interference that is suspected to be caused by an Access BPL system shall inform the local BPL operator's contact person designated in the Access BPL database. The investigation of the reported interference and the resolution of confirmed harmful interference from the Access BPL system shall be successfully completed by the BPL operator within a reasonable time period according to a mutually acceptable schedule, after the receipt of an interference complaint, in order to avoid protracted disruptions to licensed services. The Access BPL operator shall respond to complaints of harmful interference from public safety users within 24 hours. With regard to public safety complaints, the BPL provider shall be required to immediately cease the operations causing such complaint if it fails to respond within 24 hours.
(e) Consultation with public safety users. An entity operating an Access BPL system shall notify and consult with the public safety users in the area where it plans to deploy Access BPL, at least 30 days prior to initiation of any operation or service. This entity shall design or implement the Access BPL system such that it does not cause harmful interference in those frequencies or bands used by the public safety agencies in the area served by the Access BPL system. The notification shall include, at a minimum, the information in paragraph (a) of this section.
(f) Federal government spectrum users and other radio service users. An entity operating an Access BPL system shall ensure that, within its Access BPL deployment area, its system does not operate on any frequencies designated as excluded bands or on identified

frequencies within any designated exclusion zones.
(1) Excluded Bands. To protect Aeronautical (land) stations and aircraft receivers, Access BPL operations using overhead medium voltage power lines are prohibited in the frequency bands listed in Table 1. Specifically, such BPL systems shall not place carrier frequencies in these bands.

Table 1.--Excluded Frequency Bands

Frequency band
2,850-3,025 kHz
3,400-3,500 kHz
4,650-4,700 kHz
5,450-5,680 kHz
6,525-6,685 kHz
8,815-8,965 kHz
10,005-10,100 kHz
11,275-11,400 kHz
13,260-13,360 kHz
17,900-17,970 kHz
21,924-22,000 kHz
74.8-75.2 MHz

(2) Exclusion zones. Exclusion zones encompass the operation of any Access BPL system within 1 km of the boundary of coast station facilities at the coordinates listed in Tables 2 and 2.1. Exclusion zones also encompass the operation of Access BPL systems using overhead medium voltage power lines within 29 km of the coordinates for the ten Very Long Baseline Array facilities listed in Allocation US311. Exclusion zones further encompass the operation of Access BPL systems using overhead low voltage power lines or underground power lines within 11 km of the coordinates for the ten Very Long Baseline Array facilities listed in Allocation US311. Within the exclusion zones for coast stations, Access BPL systems shall not use carrier frequencies within the band of 2173.5-2190.5 kHz. Within the exclusion zone for Very Long Baseline Array radio astronomy observatories, Access BPL systems shall not use carrier frequencies within the 73.0-74.6 MHz band.
(i) Existing coast station facilities. Access BPL systems shall not operate in the frequency band 2,173.5-2,190.5 kHz, within 1 kilometer (km) of the boundary of coast station facilities at the coordinates listed in Tables 2 and 2.1. BPL operators planning to deploy Access BPL devices at these frequencies in areas within these exclusion zones as defined above shall consult with the appropriate point of contact for these coast stations to ensure harmful interference is prevented at these facilities.
Point of contact: Commandant (CG 622), U.S. Coast Guard, 2100 2nd Street, SW., Washington, DC 20593-0001, Telephone: (202) 267-2860, e-mail: cgcomms@comdt.uscg.mil <mailto:cgcomms@comdt.uscg.mil>.

Note: Systems of coordinates comply with NAD 83.

(ii) New or relocated Coast stations. In the unlikely event that a new or relocated coast station is established for the 2.173.5-2.190.5 kHz band at a coordinate not specified in Table 2 or 2.1, Access BPL

operations in that frequency band shall also be excluded within 1 km of the new coast station facility;
(iii) Very Long Baseline Array (VLBA) radio astronomy observatories. Access BPL systems using overhead medium voltage power lines shall not operate in the frequency band 73.0-74.6 MHz, within 29 km of the coordinates of the ten (10) Very Long Baseline Array facilities listed in 47 CFR 2.106, Note US311. Access BPL systems using overhead low voltage power lines or underground power lines shall not operate in the 73.0-74.6 MHz band within 11 km of those coordinates.
(3) Consultation areas. Access BPL operators shall provide notification to the appropriate point of contact specified below regarding Access BPL operations at any frequencies of potential concern in the following consultation areas, at least 30 days prior to initiation of any operation or service. The notification shall include, at a minimum, the information in paragraph (a) of this section. We expect parties to consult in good faith to ensure that no harmful interference is caused to licensed operations and that any constraints on BPL deployments are minimized to those necessary to avoid harmful interference.
(i) For frequencies in the 1.7-30 MHz frequency range, the areas within 4 km of facilities located at the following coordinates:
(A) The Commission's protected field offices listed in 47 CFR 0.121, the point-of-contact for which is specified in that section;
(B) The aeronautical stations listed in Tables 3a and 3b;
(C) The land stations listed in Tables 4 and 5;

[[Page 1378]]

(ii) For frequencies in the 1.7-38.25 MHz frequency range, the areas within 4 km of facilities located at the coordinates specified for radio astronomy facilities in 47 CFR 2.106, Note US 311.
(iii) For frequencies in the 1.7-80 MHz frequency range, the area within 1 km of the Table Mountain Radio Receiving Zone, the coordinates and point of contact for which are specified in 47 CFR 21.113(b).
(iv) For frequencies in the 1.7-30 MHz frequency range, the areas within 37 km of radar receiver facilities located at the coordinates specified in Table 6.

In article <crt90anme1@news.hawaii.edu>, jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

>It's paid for with federal funds, thus it's part of the federal interstate
>highway system. It's no different from Interstate 405 in California: It
>begins in LA and ends in San Diego -- it never leaves the state yet it's
>yet it's still an "interstate."

Ooooo...going to lecture me about my local geography? :-)

Try Interstate FIVE as an illustration...begins at the Canadian border
goes all the way south through Washington, Oregon, California, ends
at the Mexican border. Over a kilomile long, takes two days to drive
at lawful speeds. Been there, done that, many times.

Gee, if I wanted a LECTURE on highways, I'd go to the AAA website
of my local auto club office...they give out free maps to us members.

>The semester begin tomorrow -- I'll be teaching a calculus class at the
>university campus (which is not a "junior college"), 8:30-9:20 MWF,
>Keller Hall room 403. The class is full but I'll let you register,
>if you think you can handle the class.

Oh, wow.... (a big Ben Stein "wowwww....")

So awfully nice of you, Mr. Petty Chief Ossifer. I'll just go on down to
the nearest ATM, withdraw a few thousand, cross the I-5 over to
Bob Hope Airport and fly over to the Islands...JUST...for the "pleasure"
of hearing you "lecture" on The Calculus! Oh frabjous joy...

>Go back and read my complete post, paying attention to the phrase
>"...technical best seller."

Go for it! "TECHNICAL" best seller! What year? And who was the
compiler of that gem of information? [was it a bookstore in Newington?]
You might try the ABA or some other book industry associations first
to verify some nonsense claim. Or take off your blinders. Whichever
is easiest.

I've only been USING technical books since 1960 and my first job
assignment as an electronics engineer responsible for new design.
The Green Bible, the Blue Bible, Millman & Taub, Henney, Petersen
and Weldon, Floyd Gardner, lots of names which are very familiar
in my small 30+ foot total length personal bookshelf right above the
immediate computer desk here. Since I already write for money
and know several authors (who work at that full time) plus book
store owners-managers, I have some acquaintenceship with the

professional book associations. Now, if you wish to LECTURE me
on "best sellers" of anything, I will invite you to pass gas on a
shuttle flight ("go take a flying fart") between islands.

===

I think you ought to get back to verifying the claim that the Islands
have ham stations at every police and fire station...or whatever you
wrote. [if you also "lecture" in English, somebody rated you wrong]

You might remind the state government to update their web pages
to show those gems of information...or is that "sensitive" info
for certain people's eyes only? :-)

Riiiight...I can just see a Billion-dollar tourist industry "relying" on ham
radio in Times of Troubles to keep their many lines of communications
going during all those natural disasters that beset the Islands all the
time. Riiiight...and there's no military on the Islands other than the
USCG...not even the USARPAC with their Army callsign ADA. :-)

>Accusing me of lying? Are you sure you want to commit libel?

Accuse a MATHEMATICS LECTURER of lying? Heavens no!

Let's just say you don' know no bettah, blalah. :-)

I wouldn't do such terrible things to a kind soul who got a Rhode
Island ham his own "FCC mailing address" in Hawaii.

By the way, how is Mike Deignan? Still busy with all those "ham
clubs" he had callsigns for?

Don't take any wooden pineapples...

Parts of the HF spectrum will always be protected for military and emergency communications.

The remainder isn't very much spectrum for broadband purposes, especially considering the high noise levels and possibility of interference from just about anywhere in the world.

Building compact, efficent antennas is a real problem at HF, and using higher power with inefficent antennas hardly seems like a good solution for a battery powered portable..

The judge stated that dunifer and his bunch was barred from operating any
broadcast equipment until they first obtain a license from the FCC.

Which boils back to what all the pirates were say....why should I spend the time and money to try to obtain a license which apparently the FCC doesn't want to give me.

Sec. 1.3 Suspension, amendment, or waiver of rules.

The provisions of this chapter may be suspended, revoked, amended, or waived for good cause shown, in whole or in part, at any time by the Commission, subject to the provisions of the Administrative Procedure Act and the provisions of this chapter. Any provision of the rules may be waived by the Commission on its own motion or on petition if good cause therefor is shown.

Cross Reference: See subpart C of this part for practice and procedure involving rulemaking

No the cost and up keep of a station is something that not everyone can
afford. and again The majority of people in this community could careless
about broadcasting. they are more worried about other things.

The United States court have stated that "the FCC MUST consider waivers"
(WAIT RADIO v FCC 1969) "The FCC must take a serious and hard look at waiver
request" Turro v FCC (1989)
.

Indeed that is the case Carl....I suggest she organize an
Explorer Post there, built around hi-tech electronics and
ham radio. We've had one for nearly 30 years here in the
Phoenix area; Explorer Post 599. We've sent hundreds of
kids on to careers in engineering, computers, and related
technical fields. Exploring is open to both males and
females, ages 14-20, as both youth members and adult
advisors. You can make of it what you want, without all the
"wrong" kind of old white males intimidating your kids.

Rick T.
W7RT
Committee Chairman,

Explorer Post 599

Indeed, Frank. I wonder if many of those people who would propose to use HF as if was the new frontier of digital communications know exactly what they are dealing with.

HF is an unruly beast, where sections can be entirely shut down depending on solar activity, or a small signal can sometimes be propagated across the world. In addition, it has nowhere near the bandwidth capacity of the higher frequencies. And finally, the ham sections are such a small portion of the HF spectrum, that it would not make much difference if they went away or stayed.

Most modern "wireless" apps *need* the characteristics of GHz + frequencies.

Well then again like what Judge Randolph said in Greg Ruggerio v. FCC (2003)

"No one has a First Amendment right to a license," Red Lion Broad. Co. v.
FCC, 395 U.S. 367, 389 (1969), and it follows that no one has a First
Amendment
right to apply for a license."

Then why apply????

Todd N9OGL

Today with the Internet and web sites and streaming audio,
doing a pirate radio station seems kinda pointless. You
can get your message and music out, and save on FCC fines,
with the 'net. Or lease time on a starving AM station in
your city if you're dead set on using radio. Though the
'net would be more effective to distribute your message.

One way would be to just hunt for other slower CW ops calling
CQ. Where you hear CW being used is most likely the CW
subband. Of course this doesn't always work out if, say
you're in the USA and on 40m hearing foreign operators
outside the USA subband for that mode....

About the only feature of HF vs UHF or microwave is that distant
nodes or stations can directly talk to each other without
supporting infrastructure (phone lines or Internet). Same
thing that attracts ham radio operators. Though the fact that
a pair of users will hog the same bandwidth world-wide is not
such a hot feature.... Unless digital shortwave broadcasting
is desired, forget it. And how well will digital handle QSB
and QRM and QRN? Assuming the modulation method is designed
to cope with such...

Well, digital error checking can take care of that..... again and again
and again and again, until it works, or more likely, times out.

Great, as long as you don't mind a slow connection. Of course, maybe
that is why BPL is at DSL speeds instead of cable modem speeds.

Here is a bit of a question. I had started a number of these threads recently in order to get some newsgroup related activities going, because in December the group simply was losing ground to the wild and

whacky adventures of some West Virginia hams, and some others of
indeterminate origin, but of the sort to turn us into a clone of
r.r.a.misc. So far, It has had its intended effect, to get some
discussion going.

So was that a troll?

Following from his "blog" ---- enjoy!

Written by Todd Daugherty N9OGL

On February 8, 2002 the United States Court of Appeal ruled the Radio Broadcast Preservation Act (RBPA-2000) was unconstitutional (Greg Ruggiero vs. FCC 2002) then to a shock the court of appeals overturned it's own decision ruling that the RBPA of 2000 was constitutional. (Greg Ruggiero Vs FCC 2003). I'm writing this "paper" because I feel that there was something that should have been said but wasn't and since I tell it as it is I will say it. There is also a problem with the recent ruling (Greg Ruggiero Vs FCC 2003) which I've also added to this paper.

The first comes from that Bitch Judge Karen LeCraft Henderson who stated in the 2002 ruling

"By contrast, the License restriction here applies to the entire class of those who as of the time of their license application have unlawfully engaged in LPFM broadcasting. Further the restriction substantially furthers the plain intent of the Congress which believed that "the operation of an unlicensed station demonstrates a lack of commitment to follow the basic rules and regulations which are essential to having a broadcast service that serves the public, and those individuals or groups should not be permitted

to receive a licenses in the LPFM service." H.R. Rep. No. 506 at 8 (2000). What could be more reasonable or logical than to suspect that those who ignored the commission LPFM broadcast regulation in the past are likely to do so in the future and therefore to head them off."

First, you must not have to be very intelligent to be a fucking judge of the court of appeal.it seems if they can let this dumb ass bitch and her little bitch whore buddies on the bench then anyone can..

"What could be more reasonable or logical than to suspect that those who ignored the commission LPFM broadcast regulation in the past are likely to do so in the future and therefore to head them off."

Did I fucking miss something here??? Listen bitch the FCC NEVER had any LPFM rules prior to the passing of the LPFM rules in 1999. You and your fucking whores in the Court of Appeal are the stupidest mother fuckers on the planet. For years the FCC went around telling you that all a person had to do was fill out an application and ask for a waiver..well guest what you fucking sluts THE FCC FUCKING LIED TO YOU!!! The FCC has NEVER considered application and waiver for LPFM ..and you stupid fucks believed them all these years. That's why a lot of people went on the air..because the FCC wouldn't consider applications and waivers for a low power service. Bitch my group applied six times for a license with waiver and that is why we went pirate.because the FCC wouldn't even consider are application or are waiver for a community with no service..and by the way bitch.the two congressman who wrote that bill and were the chief sponsor of the RBPA of 2000 are no longer in congress because they were voted out by the people of their state because of that shit.

And now.2003 for the king bitch whore Ginsburg.

"In 1999 the Commission proposed to modify its low-power Radio rules and sought public comment upon whether it should "create two classes of low power radio service, both of which would operate in the existing FM radio band: a 1000- watt primary service and a 100-watt secondary service." Id. at p 1. The Commission also sought comment upon whether it should establish "a third, 'microradio' class of low power radio service that would operate in the range of 1 to 10 watts." Id. at p 1."

The commission proposed?? That's a bunch of shit the FCC didn't propose it someone else did in a Petition for Rulemaking.that's a bunch of fucking shit quit smoking your fucking crack.

"The Congress ultimately responded to the Commission's decision by enacting the Radio Broadcast Preservation Act of 2000 (RBPA), Pub. L. No. 106-553, 114 Stat. 2762, s 632,"

The Congress responded not out of concern of what the FCC was doing but by the huge load of cash they were getting from the National Association of Broadcasters (NAB). My dickhead congressman John Shitless (Shinkus)

Got paid $14,000 from the NAB for the RBPA but that's ok..I'm going make sure that son of bitch mother fucker isn't elected again!

" We reject also Ruggiero's claim that the character qualification is overinclusive because it prohibits all pirates, including those good pirates who stopped broadcasting illegally when ordered to do so, and those "former pirates [who] subsequently have become model citizens," from obtaining a license. All unlicensed LPFM broadcasters violated the Communications Act. Any unlicensed broadcasting demonstrates a willful disregard of the most basic rule of federal broadcasting regulation."

Then perhaps " former pirates" like WBCQ shouldn't have a license..and tell me you stupid fuck...when did the disregard to the legal process become legal..You stupid fuck head has basically given the FCC the go ahead to disregard not only the judiciary process but the Administrative Procedure Act (APA). Your stupid thinking is regardless to what a federal judge or an administrative judge says a pirate is a pirate regardless to what legal challenge they may bring and regardless of any fact or findings. Your fucking retarded thinking is that a pirate is guilty regardless of any evidence.well fuck, why do we do that with murders..Hell, Bob Butt much killed Joe Dickless but hey there's evidence he not guilty.fuck he's guilty regardless of any evidence. That the same fucking shit you did with pirates then it should apply to any other crime. Perhaps Mr. Ginsburg you should stop kissing congress and the federal government ass.

And now a few words from my favorite dickhead.Judge Randolph.

"There is in short no chilling effect and Ruggiero therefore

cannot invoke the overbreadth doctrine."

This has to be one of the stupidest mother fucker on the planet...No chilling effect??? How about the ability to allow an agency to disregard any legal proceeding as prescribed under the APA not to mention your next stupid fucks comment..

"No one has a First Amendment right to a

license," Red Lion Broad. Co. v. FCC, 395 U.S. 367, 389

(1969), and it follows that no one has a First Amendment

right to apply for a license."

Then why apply??? If no one has a "right" as you put it to apply for a license then why have a licensing system?? Just like the fuck stupid bastard you are; you've created one of the biggest loopholes a pirate would love! Because like you said no one has a right to apply for a license..thus, a person really shouldn't have to apply since there is no right. Despite what you and your little bitch whore buddies in the NAB may think as the secretary of commerce Herbert Hoover once stated The First Amendment and radio fall hand in hand..and it stupid fucks like you in the court of appeal that are destroying not only free speech but destroying the legal process.

As for the U.S. Supreme Court..there just as fuck stupid as these fucking idiots..you know at one time I had great respect for the U.S. Supreme Court. But now..by allowing this stupid fucks to destroy the legal process and basically misread Red Lion Broadcasting and bend it to their own fucking

will I think the U.S. Supreme Court has got to fuck hell and my respect is now gone. Because they along with those stupid fuck in the U.S. Court of Appeal has failed to grasp reality of what is really go on in the world.

Well, Brian, Jimmie done took the post bus out of Monmouth
often enough, could see the big bedspring radar antennas at
The Labs (there were 3 laboratory installations along the
highway). I'm sure he has contributed his Oral History
recording for the archives as have all the veterans of Project
Diana. [hand salute!]

Maybe he forgot to mention the First Ham in Space! According
to tonight's Jeopardy program clues, Ham the Chimp was the
first "American" in space. :-)

Oook, oook!

Nah. Besides setting up a pirate radio station is roughly
equivalent to flushing cherry bombs (M80s) down the toilets
in junior high school. Pisses off the authorities but
otherwise serves no real purpose.....

others
> in arguments.

That's not inconsistent with 1).

> This could be an entertainment issue, or perhaps a
> loneliness thing.

Possibly.

Or perhaps it's an attempt to bring others down to his level, get them fighting with each other, etc.

Consider that Len is not a ham, has never been one, and probably never will be one. He isn't even very knowledgeable about Part 97, as illustrated by his ignorance of 97.21(b).

So why is he preaching to the FCC and the online world about how ham radio should be? He won't tell us his motivation.

Do you mean me, Leo?

If so - when have I called Len a nasty name? Or anyone else here?
Specific instances, please.

> > To claim that another is speaking
> > "bull$#!+" is to directly infer that they are a "bull$#!+ter".

Actually it would be "to imply". The listener/reader draws the
inference.

> I admit, that was a bit odd. I'm known to drop the very occasional
off
> colored word, but only for effect.

"Sometimes the pool-pah defies the efforts to describe it".

I think if you compare the nasty names Len has called me, with the
names I have
called him, you will see a distinct contrast. Unless you consider "Len"
and "Mr. Anderson" to be nasty names.

> > Acgeed that this example does not meet your specification of "PCTA

> With one exception.

The "one exception" is "Communications directly related to the immediate safety of human life or the protection of property may be provided by amateur stations to broadcasters for dissemination to the public where no other means of communication is reasonably available before or at the time of the event." The "one exception" is not "broadcasting to amateur operators."

Other than the safety exception, Section 97.113 "prohibits amateur stations from engaging in any form of broadcasting or in any activity related to program production or news gathering for broadcasting purposes." Section 97.3 defines the term "broadcasting," in the context of the amateur service, as "a transmission intended for reception by the general public, either direct or delayed."

What N9OGL and K1MAN contend is "legal" broadcasting is defined by the FCC in in Section 97.3 as "an Information Bulletin." It is a message directed "only to amateur operators" and consists "solely of subject matter of direct interest to the amateur service. The control operator of the station transmitting an information bulletin is responsible for determining that the subject matter is of direct interest to the amateur service."

To label information bulletins as "broadcasting" is just wrong. The responsibility of the control operator to determine appropriate subject matter for one-way communications should not be construed to allow one-way commentary on non-radio issues (such as baseball) just because radio operators are interested in baseball.

"Section 97.111(b) provides for one-way communications. In summary, auxiliary, beacon, space and stations in distress are specifically authorized to make certain one-way transmissions. Additionally, an amateur station may transmit the following types of one-way communications:
1. Brief transmissions necessary to make adjustments to the station;
2. Brief transmissions necessary for establishing two-way

communications with other stations;
3. Telecommand;
4. Transmissions necessary to providing emergency communications;
5. Transmissions necessary to assisting persons learning, or improving
proficiency in, the international Morse code;
6. Transmissions necessary to disseminate an information bulletin; and
7. Telemetry."

>It's paid for with federal funds, thus it's part of the federal interstate
>highway system. It's no different from Interstate 405 in California: It
>begins in LA and ends in San Diego -- it never leaves the state yet it's
>yet it's still an "interstate."

Ooooo...going to lecture me about my local geography? :-)

Try Interstate FIVE as an illustration...begins at the Canadian border
goes all the way south through Washington, Oregon, California, ends
at the Mexican border. Over a kilomile long, takes two days to drive
at lawful speeds. Been there, done that, many times.

Gee, if I wanted a LECTURE on highways, I'd go to the AAA website
of my local auto club office...they give out free maps to us members.

>The semester begin tomorrow -- I'll be teaching a calculus class at the
>university campus (which is not a "junior college"), 8:30-9:20 MWF,
>Keller Hall room 403. The class is full but I'll let you register,
>if you think you can handle the class.

Oh, wow.... (a big Ben Stein "wowwww....")

So awfully nice of you, Mr. Petty Chief Ossifer. I'll just go on down to
the nearest ATM, withdraw a few thousand, cross the I-5 over to
Bob Hope Airport and fly over to the Islands...JUST...for the "pleasure"
of hearing you "lecture" on The Calculus! Oh frabjous joy...

>Go back and read my complete post, paying attention to the phrase
>"...technical best seller."

Go for it! "TECHNICAL" best seller! What year? And who was the
compiler of that gem of information? [was it a bookstore in Newington?]
You might try the ABA or some other book industry associations first
to verify some nonsense claim. Or take off your blinders. Whichever
is easiest.

I've only been USING technical books since 1960 and my first job
assignment as an electronics engineer responsible for new design.
The Green Bible, the Blue Bible, Millman & Taub, Henney, Petersen
and Weldon, Floyd Gardner, lots of names which are very familiar
in my small 30+ foot total length personal bookshelf right above the
immediate computer desk here. Since I already write for money
and know several authors (who work at that full time) plus book
store owners-managers, I have some acquaintenceship with the

professional book associations. Now, if you wish to LECTURE me
on "best sellers" of anything, I will invite you to pass gas on a
shuttle flight ("go take a flying fart") between islands.

===

I think you ought to get back to verifying the claim that the Islands
have ham stations at every police and fire station...or whatever you
wrote. [if you also "lecture" in English, somebody rated you wrong]

You might remind the state government to update their web pages
to show those gems of information...or is that "sensitive" info
for certain people's eyes only? :-)

Riiiight...I can just see a Billion-dollar tourist industry "relying" on ham
radio in Times of Troubles to keep their many lines of communications
going during all those natural disasters that beset the Islands all the
time. Riiiight...and there's no military on the Islands other than the
USCG...not even the USARPAC with their Army callsign ADA. :-)

>Accusing me of lying? Are you sure you want to commit libel?

Accuse a MATHEMATICS LECTURER of lying? Heavens no!

Let's just say you don' know no bettah, blalah. :-)

I wouldn't do such terrible things to a kind soul who got a Rhode
Island ham his own "FCC mailing address" in Hawaii.

By the way, how is Mike Deignan? Still busy with all those "ham
clubs" he had callsigns for?

Don't take any wooden pineapples...

318. Operation with Expired License

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-11 22:48:24 UTC
From: Phil Kane <Phil.Kane@nov.shmovz.ka.pop>
Message-ID: <cuvyxnansvbet.ia64co0.pminews@news.comcast.giganews.com>
Source record: 101784

N2EY asked what the rule authorization was for operation of an amateur statsion on an expired license if renewal was made in a timely manner.

Section 1.62(a) of the FCC Rules (not a Part 97 Rule) says:

§1.62 Operation pending action on renewal application.

(a)(1) Where there is pending before the Commission at the time of expiration of license any proper and timely application for renewal of license with respect to any activity of a continuing nature, in accordance with the provisions of Section 9(b) of the Administrative Procedure Act, such license shall continue in effect without further action by the Commission until such time as the Commission shall make a final determination with respect to the renewal application. No operation by any licensee under this section shall be construed as a finding by the Commission that the operation will serve the public interest, convenience, or necessity, nor shall such operation in any way affect or limit the action of the Commission with respect to any pending application or proceeding.

Lots of words for a simple concept.

"Beautiful". That says it all.

At least Dunifer, who used the same language to the agents who
nabbed him, was smart enough to get the services of a top-notch
National Lawyers Guild attorney (Luke Hiken - whom I respect very
much even though we were on opposite side sof the case) who
presented his arguments in a much more literate and acceptable
manner.

>So why is he preaching to the FCC and the online world about
>how ham radio should be? He won't tell us his motivation.

Well, Herr Gruppekommandant, it's time to "show you my papers"
and confess all -

Way back in prehistory of 1952 (der kommandant didn't exist
then), I had these terrible thoughts of Patriotism and stuff,
hadn't been to the sacred halls of ivy yet, and thought to volunteer
my body for Army service.

Ya see, as a poor ignorant soul, nobody had told me my body is
SO precious that I shouldn't put it in harm's way like volunteering
for the military when there was an actual War (shudders) On. We
had several hams in my home town but nobody thought to Elmer
me on being "able to serve in 'other' ways." That was the first
mistake.

The second mistake was the Army assigning me to Signal School
for a rarely-heard-of MOS called Microwave Radio Relay. (remember
that 1952 was, after all, "prehistory") Hams all knew that there was
only black magic above 30 MHz and that no REAL hams found it
useful. The rest of the radio world didn't matter...only REAL hams
knew what was good in radio and what was not.

The Army did a third mistake! They assigned me to an Army radio
station in Tokyo. One of those "small" places with only about 36
HF transmitters that was in operation 24/7 and serving the Far
East Command Headquarters. Microwave radio relay equipment
installation had been delayed by a year or so so I had to learn all
about high-power HF transmitters, how to operate them, how to do
maintenance on them, how to fix them when they went bad. Plus
the essentials of HF networking, TTY-RTTY, the original SSB, along

with VHF and UHF radio relay operation and maintenance that the Army eventually replaced with microwaves.

In the midst of all that, I compounded the mistake by trying to LEARN and do better at what I did. Shame on me. I should have read the ARRL publications a lot more than I had. The Army wasn't using any morse code whatsoever in carrying massive message traffic across the Pacific! Maybe the ARRL was already falling down on the Lobbying job because they had NO effect on the Signal Office, USA! Lots of very olde-tyme hammes were sitting around shaking their heads at the stupidity of the U.S. military for not using more morse code mode in the 1950s! [it's a wonder hams didn't march on the Pentagon to demand More CW!]

Tsk. The Mistakes didn't stop. I got a commercial radio operator's license so that I could make some money in broadcasting before moving to the sunbelt (I choice of Florida or California depending on the art school). I've been told that I NEED TO GET A HAM LICENSE FIRST in order to SHOW INTEREST IN RADIO! Except I remained ignorant since nobody TOLD ME that back then.

So, getting accepted at Art Center School of Design (to be an industrial illustrator), I'm also working at Hughes Aircraft Company doing environmental testing. More new techniques to learn and be good at, but, unfortunately, ARRL didn't have any useful literature to Elmer me in that. Morsemanship wasn't needed in environmental testing, or in radar sets (HAC El Segundo made military airborne radars then). It might shock some to know that 20 WPM morse skill isn't needed for 10g vibration testing and the temperature extremes aren't found in ham shacks, except maybe Antarctica where hams were supposedly the only link to the outside world (according to the League). Had I become a ham and advanced to Extra, I no doubt would have KNOWN all those things just by the license grant (an epiphany) but I had to listen to other, non-hams, some with degrees, some without, all working IN the aerospace industry.

Well, since HAC wasn't pioneering any morsemanship on HF methods, the usual aerospace halts and groans caused a halt in some salaries. I moved over to Ramo-Wooldridge and work in Electronic Warfare systems (such as on the Quail decoy missle, a weird little MacDonnell airbreather that could electronically imitate one or more B-52s). No morsemanship needed there at all, not even anything on HF! [must have been an oversight of both Simon Ramo and Dean Wooldridge when they got Thompson Products backing to start what would eventually grow into TRW] I'm sure that Simon, Dean, and the USAF wasn't listening to ARRL advice on radio as to what was the "best" for all. More mistakes and more prominent ones too!

In late 1958 several more mistakes happened. I changed major to electrical engineering from illustration. I was way to confused to continue on an absolute straight-and-narrow immaculate path of

life and decided to be an engineer instead of illustrator (an artist who depicts things as they really are). The FCC created the Class C and D Citizens Band Service, a TOTALLY HORRIBLE MISTAKE by them that shall be cursed to the end of time by all REAL hams, the morsemen of the apocaleptic. Imagine! NO morse code skill needed for ordinary citizens to get ON HF radio, not even any TEST at all! Even worse was an individual changing their career goals before their education is completed! HORRORS.

Oh, the mistakes get worse. I bought a Johnson Viking CB transceiver and got a CB license...and could do only about 8 WPM morse, if that. Several tried to verbally horse-whip me on that but I got away. Worked great in the all-aluminum body '53 Austin-Healey sports car, tooled around southern Cal talking to other mistake-prone evil grownups who used HF without a valid morse test! American-made CB radios! Talk about prehistoric times! Law-breakers all, no shame, sort of like the Old West.

I know its hard to believe but USA university curricula do NOT require any morsemanship or being-licensed-in-amateur-radio-to show-interest-in-radio!!! Lots of college students in both day and night classes were interested but, sadly, without that REQUISITE ham license FIRST in order to show their interest. BIG mistake. Done by all the little colleges out here...UCLA, USC, Berkeley, you know, tha small ones without the ivy all over.

Tsk. More mistakes beginning early, like high-fidelity music interest since high school. Instead of wanting to listen to good sound, I should have worked very hard at perceiving the "music of morse" (monotonal, aperiodic). My contemporaries liked to hear the false music of symphonies and jazz bands. Shame on us. We knew no better than to trust our own senses.

Then personal computing! Absolutely NO relationship to morse or pioneering HF radio by working DX with morsemanship. We hedonistic number-loving infidels went beyond the limited ranges of "73" and "599" to enable the PC boom to explode in the late 1970s. We should have spent our time in monastaries of morse copying the treasures of Hiram's writings and REAL morse code, not the graven images of source or assembler code of the false gods such as the ACM or the IBM of Armonk. We sinned mightily and forsake the divine ordained religious leaders at the holy city of Newington.

Yes, we infidels denigrating the True Calling should have worked our morsemanship and pioneered the airwaves for Telstar, microwaves across the continents, the communications satellites giving us near-instant communications across the globe, the Deep Space Network, Men ON the Moon televised live, the Internet, the cellular telephone...all of which use absolutely NO morsemanship to devise or build or perfect. We all had FALSE MOTIVATION.

Yes, it's a mighty CONSPIRACY against the amateur morsemen, begun before most of them existed, deliberately kept up to humiliate them and keep them from perfecting the Antique Radiotelegraphic Society (ARS) of the United States. We are all WORKING AGAINST YOU MORSEMEN in a titanic struggle for power (but only in news-groups) and THREATENING YOUR MIGHTY EGOS!

It was all a mistake. An evil, antichrist-sort of mistake, compounded many times, deliberately aimed at all those mighty macho morse-men in this newsgroup. We have defiled your divine wishes, holy fathers. We ask no penance, no absolution for our sins (or sines).

We answer to a Higher Order, not to your demands. Go thee and perform auto-intercourse.

Interesting article. Very near the front is a patent inaccuracy:

"Probably the most well-known mixed-mode operation occurs in
police vehicles, where data is squirted across to the patrol car
on voice channels. The data is usually information about a person,
a vehicle, or a location and is displayed in a small screen in the
cruiser."

Please don't tell that to my public safety communications clients
who all use separate dedicated channels for voice and data, albeit
in the same general frequency range. It will only confuse them....

The level of police tech varies quite a bit from place to place. Many places do use the mixed-mode system I described. I didn't characterize it as the latest development or anything like that, as I don't keep up with the latest police tech.

So - it is "inaccurate" where you live, but things tend to vary... Most of it's not at all like the old home QTH.

I can gaurantee you the name on the book is NOT "Leonard H.
Anderson!"

An unknown. Not even recognized in his own peer-group, let alone
the shelves of B.Dalton Bookseller or Barnes & Noble! Forced to
"write" some dubiously original items for an Amateur Radio journal
(since defunct) to get his name in print.

Some "professional".

> I've only been USING technical books since 1960...

WHOA THERE YOUR SCUMMINESS ! ! !

What happened to all those magnificent years as the World's
Greatest Military Communicator! from 1953 to 1956...?!?!

You just memorized all those manuals and never again opened one
up...?!?!

> ....and my first job
> assignment as an electronics engineer responsible for new design.

Lessee...YOU stated that you went to night school for 14 years to
earn a degree.

NO ONE is titled an "electronics engineer" without at LEAST an
Bachelor's Degree.

So...we have you in the Armed Forces from 1953 to 1956 (Active
Duty). You've enthralled us with a litany of other petty jobs in that
four year span from 56 to 60 before, NONE of which included enough
college to get you a Bachelor's in ANY discipline, let alone electrical
engineering.

NOW you're insinuating that you were an "electrical engineer" in
1960...?!?!

And one allegedly responsible for "new design"...?!?!

The math and your previous rants don't add up, Putzman!

> The Green Bible, the Blue Bible, Millman & Taub, Henney, Petersen

Although his gross errors vis-a-vis radio regulations have been
out there for a week now, Lennie can't seem time to retract his error
and apologize for it, like a MAN would.

However he DOES have time to gin-up yet another diversion AROUND
it.

Leonard H. Anderson is a liar.

Leonard H. Anderson is not trustworthy.

Don't call it "broadcast" then. Say "information bulletins"
and everything is cool, as long as the material is nothing but
amateur radio information and only amateur radio information..

My translation to English: If you send in the renewal
before your license's expiration date, you can continue
to use the privs of the license until the FCC says
that they ain't gonna renew it. I suppose the postmark
(back in the old days of paper snail mail) would determine
that you sent it before the license was to expire. One
probably should do a return receipt to show to the FCC
field guy that you did mail it and that they got it.
But that just says that you mailed *something*, not
that you sent the right form filled out right.

If you're late sending it in, you have to stay off
the air until you get the new license in teh mail
(or at least when you show in the FCC database as
having been renewed).

Yes?

Thanks, Phil!

Seems to me that key words are:

"proper and timely application for renewal of license"

"activity of a continuing nature, in accordance with the provisions of
Section 9(b) of the Administrative Procedure Act,"

Lots of room for interpretation there?

For example, if I mail in a renewal the day before expiration, is that
"timely"?

> My translation to English: If you send in the renewal
> before your license's expiration date, you can continue
> to use the privs of the license until the FCC says
> that they ain't gonna renew it. I suppose the postmark

See above about "timely".

> One
> probably should do a return receipt to show to the FCC
> field guy that you did mail it and that they got it.
> But that just says that you mailed *something*, not
> that you sent the right form filled out right.

Exactly! And how does anyone know it's "proper" until the Commission
rules?

I bet the occasional old Form 610 still shows up at FCC Hq. for a
renewal.
>
> If you're late sending it in, you have to stay off
> the air until you get the new license in teh mail
> (or at least when you show in the FCC database as
> having been renewed).
>
> Yes?

That's how I see it. But with online renewal and the database, you
don't need to wait for the mail.

But what is the interpretation of "activity of a continuing nature"?
Obviously a broadcaster or safety service transmitter that is on-air
24/7 would be covered. But most amateur operation is of an
intermittent, unscheduled, unprogrammed nature - would it be considered
"activity of a continuing nature" if the ham is on the air on an
irregular schedule?

--

So it appears that, in *some* cases (where a renewal application was
previously filed), a ham with an expired license may be able to operate
legally in the grace period.
But definitely not in all cases.

Leonard H, Anderson has expressed yet another lie.

Why does he do this?

What causes a person with his alleged years of education and
experience to intentionally make untruthful statements in a public
forum...?!?!? ESPECIALLY a forum that is automatically archived and
immediately retrievable?

What an I D I O T ! ! ! !

> with VHF and UHF radio relay operation and maintenance that the
> Army eventually replaced with microwaves.

You were never a "radio operator", according the the MOS'es you've cited,
Lennie.

You were just a radio mechanic. And I doubt you had much to do with THAT
either.

> In the midst of all that, I compounded the mistake by trying to LEARN
> and do better at what I did.

And you made a life-long career of it...Mostly by riding the coat-tails of
others who DID "do better".

> Shame on me. I should have read the ARRL publications a lot more than I
had.

Guess what I found in the Army MARS station on Okinawa, Lennie...???

The WHOLE SET of ARRL publications.

> The Army wasn't using
> any morse code whatsoever in carrying massive message traffic
> across the Pacific! Maybe the ARRL was already falling down on
> the Lobbying job because they had NO effect on the Signal Office,
> USA! Lots of very olde-tyme hammes were sitting around shaking
> their heads at the stupidity of the U.S. military for not using more

> morse code mode in the 1950s! [it's a wonder hams didn't march
> on the Pentagon to demand More CW!]

Dunno why you keep trying to work some unfounded rants about Morse Code
use into your already dubiously factual posts, Lennie.

> Tsk. The Mistakes didn't stop. I got a commercial radio operator's
> license so that I could make some money in broadcasting before
> moving to the sunbelt (I choice of Florida or California depending on

: So it appears that, in *some* cases (where a renewal
: application was previously filed), a ham with an expired
: license may be able to operate legally in the grace
: period.

After all the indignant and self-righteous heat you've applied to LenOver on this issue, it appears you were >equally ignorant< of the content of Part 97.

97.21(a)(3)(ii) puts it this way:

"When the application has been received by the FCC
on or before the license expiration date, the license
operating authority is continued until the final disposition
of the application."

Been there in the rules for decades, and is commonly known among most people who are even slightly conversant with Part 97.

Didn't you catch on to this when KV4FZ stayed on the air for years after expiration while his renewal was being litigated?

Of course, Herb being an accomplished Morse operator, you'd probably cut him more slack than you cut for LenOver (not that either deserves any).

That's very true. Our clients are almost all major city and county
law enforcement agencies across the US who barely have enough voice
channels capacity for what they need to do, let alone share some of
them for mixed-use.

If it is labeled "broad" -cast, it is intended for a _wider_ audience,
defined by the FCC as the general population. If it is information
narrowly aimed at radio hams, then it is "Information Bulletin" and
should be labeled as such.

That is a distinction with a difference.

>> MHz. :-)

With the correct integer divisor and correct integer multiplier, it
comes out to 500 KHz fairly exact. Most TV stations of the old
days had color subcarrier generators that were beat against
WWV on HF. It was picked for that very reason. Smart pickers
even back then.

Heh. You are probably too young to get involved in a post-war
event called the "beer can vertical." Back when cans were made
of solderable materials, some WW2-age guys had beer parties
to get the cans, solder them together to make a thick vertical
radiator. By the end of one such "vertical," the soldering started
to get rather out of line.

I was a young teener at that time and never did like beer. Still
don't. Don't mix beer and ham construction projects, especially
with a group that doesn't know what they are doing. Never heard
of a "beer can vertical" that stayed up. :-)

At S-Band (2 to 4 GHz), engineer-author-ham George O. Smith
calculated that a KiloWatt into a 30 db gain dish at S-Band could

honk into Mars with the receiver using another 30 db gain dish
and running wide-spread (850 Hz) FSK RTTY. Over all distances
in planetary orbits and within seeing distance (planetary occlusion
would be obviously prohibitive). Smith was at Harry Diamond Labs
during WW2 designing/debugging proximity fuses as well as the
long-running series of "Venus Equilateral" stories involving a radio
relay asteroid between Earth and Venus and Mars. In the 1940s,
of course...we've learned that the other planets aren't hospitable.

>My Morse key has two settings: up and down. I can handle that, but some
>folks might not be able to handle something a bit more complex than that
>(although many can).

I've met some hams who can't work a single-unknown variable
algebra problem yet proclaim themselves to be "designers."
They might need a four-week course class to learn to set a
VCR or DVD recorder. :-)

>Interplanetary QSOs might prove *very* interesting. You certainly can't

>but narrow bandwidths can also make that Doppler shift a lot more difficult
>to deal with. I doubt wideband FM would cut the mustard due to a *huge*
>increase in noise with the much larger bandwidth over narrow bandwidth
>modes.

The Deep Space Network out of JPL done solved a lot of those
problems long ago. Using lower powers than seemed practical
with bandwidths that seemed impractical in the 50s.

All the numbers are available: Path loss, antenna gain, bandwidth,
just plug them into an equation or nomograph (or search for a
"program" also called a Java aplet somebody tossed together).

The major problem is TIME DELAY and trying to adjust traditional
methods to meet future needs. There's a discernable audio pause
when talking to someone via a comm sat sitting in geosynchronous
orbit and it isn't even at a tenth the distance to the moon. It's 2 1/2
seconds (give or take) doing a Lunar "QSO." Obviously the old
tradition has to be tossed for interplanetary stuff and so the avowed
ham morsemen will have their keys pried out of cold, dead
terrestrial fingers.

Besides, just who is going to deliver the QSLs saying "UR SIG
599!" ? :-)

>I don't think I'm likely to be around by the time ordinary folks can take a
>trip to mars .... ;)

I'm optimistic. :-) Having worked IN the field of electronics and communications for a mere half century, the changes to all kinds of comms have been so vast as to be overpowering the imagination of even science-fiction writers (George O. Smith didn't think servos could keep tracking the planets, used humans to do it in his 1940s stories).

Back in 1954, 1.8 GHz communications equipment was considered very high-tech. Special vacuum tubes, coaxial resonators, wave-guide based bandpass filters. Big, expensive, fussy to tune. 50 years later we have consumer electronics cordless phones operating at 2 GHz and the 5.8 GHz units' cost hovering close to $75 over-the-counter, plug-and-play. One in three Americans has a cellular telephone subscription now and those operate around 1 GHz and some cell phones have digital cameras built in.

Look for VOIP to make inroads on the traditional wired telephone service making hash out of the old, reliable, trustworthy "long-distance" calls for ordinary citizens. All them old 'phone gabbers will have a ball denouncing that damn upstart Voice Over Internet Protocal and hollering "you can't send telephone calls over the Internet!" :-)

>Dang, where'd I put my Morse key?
>:))

Yup. Don't be late for the ham party where everyone recreates the grand old "pioneer" days of the 1920s and 1930s with the morse-Vail "code." Not for me. I love the future just around the corner just like I've enjoyed all the new developments over the last half century.

Remember what Brian Burke said: "Morse code gets through when everything else does..."

What "indignant and self-righteous heat"?

Len claimed that *all* amateurs with expired licenses could *legally*
continue to operate in the grace period. Nothing about renewals being
filed, etc. I
simply pointed out that he was mistaken on that point - but he won't
admit it.

If a ham with an expired license followed Len's claim and operated with
an expired-but-in-the-grace-period license without a pending
pre-expiration renewal application, s/he'd be violating Part 97.

By comparison, after it was pointed out to me that the rules allow
continued operation if a renewal is filed, I amended my original
statements.

If a ham with an expired license followed my claim and did not operate
with
an expired-but-in-the-grace-period license, there would be no violation
of Part 97. If the ham had applied for renewal before expiration, s/he
would
miss out on operating when in fact it would be legal, but that's erring
on the
side of safety.

> 97.21(a)(3)(ii) puts it this way:
>
> "When the application has been received by the FCC
> on or before the license expiration date, the license
> operating authority is continued until the final disposition
> of the application."

Yes, it does. And that's why I amended my statement.

It could be argued that what 97.21(a) (3) (ii) says is that if
you renew before the expiration date, the license never really
expires in the first place.

> Been there in the rules for decades, and is commonly known among most
people
> who are even slightly conversant with Part 97.

So is the fact that hams *cannot* legally operate in the grace period
with an expired license if no renewal application has been filed. But
Len claims *all*
hams can legally operate in the grace period. That's simply not so. Yet
he
won't admit it.

Len gets very upset when someone like me points out his errors.

> Didn't you catch on to this when KV4FZ stayed on the air for years
after
> expiration while his renewal was being litigated?

Sure. But he applied for renewal long before the expiration date.
>
> Of course, Herb being an accomplished Morse operator, you'd probably
cut him
> more slack than you cut for LenOver (not that either deserves any).

Not at all - just the opposite. Herb, being a licensed amateur
operator, should
get *less* slack, because he should have known better.

Len's ignorance isn't the problem; it's his resistance to accepting his
mistakes and his attacks on those who point them out.
Thanks for clearing up that point about renewals.

Gee, Len, you must be talking to the mirror again.

Do you still think that it's perfectly legal for *all* amateurs to operate with expired-but-in-the-grace-period licenses?

I would disagree somewhat.

An application for renewal of a license means that the license is not expired as long as it is sent in on time.

Assuming that there is no reason for not granting a renewed license, it will be granted, I hope I'm correct.

If you send your IRS forms in by April 15th, it is considered sending them in on time, even though the IRS has not received them. Send it in on April 16th, and you could have a problem. It is late.

Seems a pretty simple thing to me. Send in your renewal by the expiry date of your license, and your license continues.

Send it in the day after the license expires, and the license remains expired until they re-issue it.

Mel, we've been discussing this for a while after Leo brought it up
some days ago.

Until the F.C.C. can receive and grant renewals immediately from all
Hams, there will have to be such a rule. Otherwise they would have to
determine some time lag, say a week, and then tell you you have to
calculate the number of days in ten years minus 1 week. Remember it will
be different for many hams, because it depends on how many leap years
there have been since you got your ticket, and whether you got your
ticket before the leap day if you got the ticket during a leap year.

A lot easier to just say "Send your renewal in by the ten year expiry
date, and you're covered".

That is an aberration, as the system is designed more for lawful users
than scofflaws.

THE THIRTEEN COMMANDMENTS OF FLAMING:

Flames should be witty, insulting, interesting, funny, caustic, or sarcastic, but NEVER, EVER, should they be boring. The Thirteen Commandments of Flaming

1. Make things up about your opponent: It's important to make your lies sound true. Preface your argument with the word "clearly." "Clearly, Fred Flooney is a liar, and a dirtball to boot."

2. Be an armchair psychologist: You're a smart person. You've heard of Freud. You took a psychology course in college. Clearly, you're qualified to psychoanalyze your opponent. "Polly Purebred, by using the word 'zucchini' in her posting, shows she has a bad case of penis envy."

3. Cross-post your flames: Everyone on the net is just waiting for the next literary masterpiece to leave your terminal! From the AppleII RoundTable to X-10 Powerhouse RoundTable, they're all holding their breath until your next flame. Therefore, post everywhere.

4. Conspiracies abound: If everyone's against you, the reason can't *possibly* be that you're an obnoxious sh??head. There's obviously a conspiracy against you, and you will be doing the entire net a favor by exposing it.

5. Lawsuit threats: This is the reverse of Rule #4 (sort of like the Yin & Yang of Flaming). Threatening a lawsuit is always considered to be in good form. "By saying that I've posted to the wrong group, Bertha has libeled me, slandered me, and sodomized me. See you in court, Bertha."

6. Force them to document their claims: Even if Harry Hoinkus states outright that he likes tomato sauce on his pasta, you should demand documentation. If Newsweek hasn't written an article on Harry's pasta preferences, then Harry's obviously lying.

7. Use foreign phrases: French is good, but Latin is the lingua franca of flaming. You should use the words "ad hominem" at least three times per article. Other favorite Latin phrases are "ad nauseum," "veni, vidi, vici," and "fetuccini alfredo."

8. Tell 'em how smart you are: Why use intelligent arguments to convince them you're smart when all you have to do is tell them? State that you're a member of Mensa, or Mega, or Dorks of America. Tell them the scores you received on every exam since high school. "I got an 800

on my SATs, LSATs, GREs, MCATs, and I can also spell the word 'premeiotic' ." Stick a bunch of impressive initials on your sig, and make that sig at least 10 lines long, to show people how Really Powerful you are. Loudly point out their spelling errors.

9. Accuse your opponent of censorship. It is your right as an American citizen to post whatever the hell you want to the net (as guaranteed by the 37th Amendment, I think). Anyone who tries to limit your cross-posting or move a flame war to email is either a communist, a fascist, or both.

10. Doubt their existence: You've never actually seen your opponent, have you? And since you're the Center Of The Universe and Chief Net-Cop, you should have seen them by now, shouldn't you? Therefore, THEY DON'T EXIST! This is the beauty of flamers' logic.

11. Lie, cheat, steal, leave the toilet seat up. Who cares! You're probably a fat, pimply-faced, manipulative computer-nerd with no social skills, and your opponent is worse. Besides, if you were getting laid at all by anything other than the cheap hookers down the street, you wouldn't be flaming anyway.

12. When in doubt, insult: If you forget the other 12 rules, remember this one. At some point during your wonderful career as a Flamer you will undoubtedly end up in a flame war with someone who is better than you. This person will expose your lies, tear apart your arguments, make you look generally like a bozo. At this point, there's only one thing to do: INSULT THE DIRTBAG!!! "Oh yeah? Well, your mother does strange things with vegetables."

13. Last, but not least, threaten to tell their sysadmin or postmaster all about them. You can always hope that they are newbie enough to feel threatened by this, unless they had a younger brother or sister who was always tattling to Mommy.

EXAMPLE...for the Rookie Flamer

Dear Fred,

I object to your use of the word "dear." It shows you are a condescending, sexist pig. Also, the submissive tone you use shows that you like to be tied down and flagellated with licorice whips.

>While I found your article "The Effect of Belly-Button Lint > on
> Western Thought" to be extremely thought-provoking,

"Thought-provoking?" I had no idea you could think, you rotting piece of swamp slime.

> it really shouldn't have been posted in rec.scuba.

Your attempts constitute nothing less than censorship. There is a conspiracy against me. You, Riff Raff, and Simon Sinister have been constantly harassing me by email. This was an ad hominem attack! I

have therefore cross-posted this to alt.flame, rec.nude, comp.graphics, and rec.arts.wobegon. I have also copied this whole correspondence to your sysadmin/postmaster, so he can delete your account.

> Perhaps you should have posted it in misc.misc.

It is my right, as granted in the Bill of Rights, the Magna Carta, the Bible and the Koran, to post where ever I want to. Or don't you believe in those documents, you damn fascist? Perhaps if you didn't spend so much time sacrificing virgins and infants to Satan, you would have realized this.

> Your article would be much more appropriate there.

Can you document this? I will only accept documents notarized by my attorney, and signed by you in blood. Besides, you don't really exist anyway, you AI project, you.

At all times, remember what the original meanings of the word "flamer" were: 1) a loud, obnoxiously gay man, and 2) a person who lights their farts for amusement.

> that smells strongly, maybe like paint thinner).

It doesn't matter much right now. This is one of those periods in which
you claim you have no intention of obtaining an amateur radio license.
Back when you made your boast, you were apparently set on getting a ham
ticket. In a few weeks, that could all change again.

> Another says I can ONLY "show interest in radio" by getting an amateur
> radio license FIRST.

Steve's got you pegged pretty well, Leonard. You tell more lies than
Richard Nixon. You've proclaimed a decades-long "interest" in amateur
radio. Trouble is, you've never been interested enough to sit an exam
which would provide an amateur radio license.

> [no real reason given except he was bereft of any
> comback and was trying to wing a reply] Well, that's just too #$%^!!!! bad
> since I made that decision back 48 years ago, got a First Phone and

So because you have a shelf full of books and since you've written for
money, Jeffrey's claim can't possibly be true. Does that sum it up?
I am happy to hear that you have a personal bookshelf though.

Remember too that there's a 90 day limit in the other direction - if you send
in a renewal too early (more than 90 days before expiration) they send it back.

I'm not sure why that 90-day rule exists. For many years you could get
a simultaneous renewal whenever you modified. I was a ham for a long time
before I ever actually "renewed" because every upgrade and address change
resulted in a renewed license too.

Perhaps the vanity call system stopped the simultaneous renewals.

It's that expensive, state-of-the-art data system they installed!

Reminds me of the time clocks where I work...Used to be that you
took a card, slid it into the clock, it "puched" your card, and you got
got paid for teh time you worked.

Now we have the KRONOS system (Reminds me of the science fiction
movie of the same name...stops across everything) If you "punch in"
one minute before your "block", they have to pay you for the previous
15 minute block. If you punch out one minute AFTER your "block", they
ahve to pay you for the next 15 minute increment.

Of course what's happening is that we have a cluster around the
clock. And people are in such a panic at the end of the shift that
stuff "get's done" just to get to the clock "on time".

Technology doesn't always solve problems (ie: record keeping for
the FCC) It more often than not creates more than it solves.

How do you know this, Steve?

If a ham happens to move right at the time of renewal, the system can handle it.
So that's not the problem.

My speculation on vanity calls is based on the fact that a new vanity call issuance generates a renewal. That way, the fee doesn't have to be pro-rated.

But I don't know why nonvanities couldn't be renewed when a ham moves or upgrades. That would reduce FCC paperwork.

--

One effect of the old system was that it tended to make the number of amateurs appear larger than it really was.

I think there's a difference in highways; as in "intrastate" and
"interstate." I believe it's intrastate if it stays inside the boundary of
a state and "interstate" if it goes outside the boundary of a state.

> only black magic above 30 MHz and that no REAL hams found it
> useful.

Where do you get that? It's pure nonsense. Real hams were exploring
frequencies above 30 Mc. before even *you* were born...

> The rest of the radio world didn't matter...only REAL hams
> knew what was good in radio and what was not.

> Army eventually replaced with microwaves.

All by yourself?

Or were there a couple of hundred other Army personnel there, some with
a lot more experience, to teach you and guide the way?

Did you have to buy books and materials, etc.?

> In the midst of all that, I compounded the mistake by trying to
LEARN
> and do better at what I did. Shame on me. I should have read the

Do you *really* think 27 MHz cb was a good idea?

> Oh, the mistakes get worse. I bought a Johnson Viking CB
> transceiver and got a CB license

Bought? With all that radio knowledge, and your commercial license,
you settled for an appliance rather than building a radio?

>...and could do only about 8 WPM
> morse, if that.

You seem to have skipped over when you tried to learn Morse Code.
Funny,
in the deluge of details, that little tidbit gets lost.

btw, way back in 1951 the FCC created two classes of amateur license
that
required only 5 wpm Morse code. Yet you never got either a Technician
or
a Novice license, even though the Technician was specifically meant for

those interested in the "world above 30 Mhz".

> Several tried to verbally horse-whip me on that but

> the divine ordained religious leaders at the holy city of
Newington.

Well, Len, my computer experience goes back to 1972, writing software
that had to be punched on cards for use in mainframes. I went to school
in the very building where the first high-speed general-purpose
electronic digital computer, ENIAC, was designed and built. For the US
Army, btw. I actually got to see, pick up and examine pieces of ENIAC
when they showed up back at the U in 1976.
>

All that verbiage, and yet you avoid the question completely.

So I was 100% correct: Len is not a ham, has never been one, and
probably
never will be one. He isn't even very knowledgeable about Part 97, as
illustrated by his ignorance of 97.21(b).

But he continually preaches to the FCC and the online world about how ham radio should be.

He won't tell us his motivation.

> Go thee and perform auto-intercourse.

Gee, Len, that's really "professional". Really makes people see the logic of your arguments. Perhaps you should put that into your next comments to the FCC.

It's more to do with who funded the construction of
what highway. The Interstates were federally funded
(about 90%, 10% by the state that whatever interstate
highway is in). Before the Interstates were built,
long distance driving was a real PITA. That the
Dept of Defense partially funded the Interstates so
they would be able to get convoys of troops and stuff
to somewhere. Intersections with local roads were
designed so if a bridge was bombed, traffic could
still get thru (go on the off ramp and then across
the local road and back on on the on ramp).

Railroads worked well in WWII, but our mainland
for the most part wasn't bombed. Take out a railroad
bridge and things get bottled up for a while.

> Ooooo...going to lecture me about my local geography? :-)

You bet. You falsely claimed as fact that an interstate must connect
two or more states, and I provided a counterexample proving you wrong.
But instead of saying, "Thanks, Jeff, for correcting me", you try to
run away from your error by taking us on a tour of I-5:

> Try Interstate FIVE as an illustration...

One example is not enough to prove a proposition true, especially when
a counterexample exists.

I've noticed you do this a lot -- when a claim of your's has been proven
false, instead of acknowledging your mistake, you attack the responder
and go off on some unrelated tangent:

> begins at the Canadian border
> goes all the way south through Washington, Oregon, California, ends
> begins at the Canadian border
> goes all the way south through Washington, Oregon, California, ends
> at the Mexican border. Over a kilomile long, takes two days to drive
> at lawful speeds. Been there, done that, many times.

And here comes the sarcastic remark:

> Gee, if I wanted a LECTURE on highways, I'd go to the AAA website
> of my local auto club office...they give out free maps to us members.

You're too easy to predict.

Also, it's not "your" local geography -- I grew up in San Clemente,
fought wildland fires all over the Southland while on the SCFD and
CDF, and currently own a home in Ventura County (VC property tax web
site will verify that).

>

3 digit numbered Interstate highways are usually short spurs
and circle routes. Built to bypass cities drivers are not
looking to stop in, or to connect to other Interstate or
local highways. The numbering pattern is NXX, where XX
is the number of a long Interstate highway, and N to
give each spur or circle its own name inside the same
state. Circles usually get even numbered Ns, and spurs
odd numbered Ns. Also odd numbered XX Interstates usually run
north/south, and even numbered XX Interstates east/west.
They put the low numbered XX Interstates in the southwest,
as the Northeast had the low numbered old US route roads
(cuts down on user confusion). AFAIK, there's no Interstate
666, Bible Belters would think it was the "Highway to hell" ;-)
Or an Interstate 13....

Oh Calculus. I enjoyed it so much I took it twice! :-)
Oh I learned enough to do exam problems to pass, but
I can't say that I actually learned anything enough
to actually use it to solve a real world problem.

I once could do (intergral)(csc x^3)/(tan^2 x^4 +1) dx
but what would you use that on?

Oh and proofs. What a waste of time proofs were. And
you never had to do any on tests. I must have missed the day
of class where they taught how to do proofs and how
to read them. And why you should care. It seemed to
be just so much BS, as the only real proof of something
is what gets a right answer on a test.

<mail@nomail.com> writes:

>Uh huh. I did ask. And, you came back with this argument initially
>that--paraphrasing--were you not entitled to your opinion. You are
>entitled.

Incorrect. Brian Burke was specifically talking about those in
here who belong to the "PCTA extra" persuasion and who
continually try to put those who are against the morse code test.

Those "PCTA extras" persist in claiming turf on who should
direct EVERYTHING about U.S. amateur radio - including all
federal regulations thereof - just because of tenure as an
amateur or because they feel they "own" the hobby and are
somehow "entititled" to be of the noble calling of amateurism.

PCTA extras imply they are "superior" about everything and
are busy trying to shove out the NCTAs from this newsgroup.

>You are entitled to believe that the ground a military person
>walks on is sacred and that no one else is "entitled" to the same benefits
>from the United States as a person who has served in the military.

You are off on your own fantasy there. Brian Burke served in the
USAF, overseas. I served in the US Army, also overseas, and
specifically in radio communications. It is safe to say that we are
both proud of serving our country.

What has grown into this overlong thread is a bunch of NON-
servers who imply that they are "superior" in all respects to those
of us who served but who are not favoring any morse code test for
U.S. amateur radio licenses. Further, those same NON-servers
imply/claim that Their knowledge of the military and government
is "superior" to Brian and myself.

It gets worse when an ex-serviceman (a PCTA extra) brags of
his "seven hostile actions" yet cannot identify their where or
when, AND has NO claimed experience in any specific radio
communications, AND falsely accuses others of "dishonoring"
their military unit members. That individual has NO displayed
knowledge of military radio communications, networks, or
regulations thereof (see the specious claim that "MARS
>>IS<< amateur radio" instead of the Department of Defense).
On top of that this individual continually uses Yiddish pejoratives
as personal insults despite having no knowledge of Yiddish nor
of central European languages.

>You are
>entitled to believe that we don't all, in some form or other, contribute to
>the integrity, continuance, and strength of the United States--some of us by
>just damned getting up out of bed every morning and going to some dorky job
>where a damned good portion of our income goes to supporting the military,
>and the government, and the "other" people (you know...those who are not
>worthy)...

Well, you claim, solely by birthright, that you are "entitled" to MORE
than those of us who spent years in the military, serving our country
the best way we could? All because you did NOT serve yourself?

That's a remarkable claim of "citizenship" which you wear. It is not
an article that I wish to put on at any time.

About the only thing that can be said about the extreme polarization
in here is that the PCTA extras must certainly believe they are so
damned "superior" in radio BECAUSE they took and passed a
civilian amateur radio morse code test. Yes, that's the ticket.
Moresemen are always "superior." They say so all the time. All
others must bow down to them. They are royalty.

But, they are still AMATEURS in radio. Try to remember that.

Even when those PCTA extras expound on socio-political issues
that don't even come close to U.S. amateur radio or its policy,
they remain superior and aloof to all NCTA.

>So, yeah. I asked. And, I should have known better...

Quite true.

But, you have aligned yourself with the PCTA extra mob in here.
As a friendly suggestion, wear some armor next time and the
severity of newsgroup wounds won't cause so much apparent
psychological trauma.

>Do you still think that it's perfectly legal for *all* amateurs to operate with
>expired-but-in-the-grace-period licenses?

"Operate" what? :-)

Tsk. Operate on a patient? [need lots of qualifications from government on that, but not from FCC]

Operate a motor vehicle? [need a state driver's license to do that legally]

Operate a high-power broadcast transmitter? [most broadcast stations don't need any FCC-tested licensed radio operators nowadays and the amateur radio license didn't apply to that anyway...]

Operate a small boat radio transceiver? [you need to check Part 90 of Title 47 C.F.R. - include the HF bands - before opening your keyboard...some licensing required but it isn't amateur radio kind]

Operate any RF emitter of high or low power while in the performance of a Department of Defense contract? [civilian radio operator license does not apply there]

Tsk. Jimmie, you best go back and read ALL of what was written and try, try very hard, to discern when someone is using sarcasm or pulling your leg. :-)

Tsk, tsk. Do you have a valid Expounding-Guru license valid for giving us all the gracious benefit of "cures" to modern national socio-poliitcal problems? You do that all the time in this amateur radio policy forum. Those Guru opinions aren't even close to being about amateur radio...not even when you shake your fists and stamp your feet saying "they apply! they apply!" :-)

You haven't even figured out what "401 Alarm" means yet or where it is from... :-)

That's nice, Kim. I don't know of anything called the "Intrastate
Highway System". If it has a red, white and blue sign with I-something,
I can assure you that it isn't part of the "Intrastate".

Whole bunch of factors involved, like the Autobahns in Germany
and the success of toll roads like the Pennsylvania Turnpike.

Eisenhower was a big proponent of the interstate highway system.

There was also the concerted effort of the automakers, oil and
rubber companies, and even the concrete industry to get more
Americans to own and drive cars and trucks. They went so far
as to intentionally buy up and destroy transit systems (such
as the Pacific Electric in the Los Angeles area) so that
people would drive cars.

> Railroads worked well in WWII, but our mainland
> for the most part wasn't bombed. Take out a railroad
> bridge and things get bottled up for a while.

Bombing bridges, particularly narrow ones like most RR spans,
is singularly difficult without special weapons. Highway bridges
are at least as vulnerable as RR bridges to such attacks.

But does anyone *really* get gigged by IRS for being a day or two late?
Most folks won't take the chance to find out.

> Seems a pretty simple thing to me. Send in your renewal by the
expiry
> date of your license, and your license continues.

Sure - *if* the FCC gets it before then. And if it's correct - if you
forgot to fill out certain blocks, they might reject it.
>

When I worked for the now-departed-but-not-missed Douglas Aircraft Company, the hourly employees lined up at the clock some 10 minutes before the end of the shift (union-negotiated "wash-up time"), and no one punched out before the shift-end time. We engineers did not have to punch the clock, but we had to fill out a "daily time sheet" which served the same function.

At other employers, the custom developed of filling out the sheets a whole day (or for some of us, week) at a time because we knew what "they" wanted our time to be charged to.....

America, America....

>Technology doesn't always solve problems (ie: record keeping for
>the FCC) It more often than not creates more than it solves.

Especially when the prigramming for the system which has to run it is contracted out to the "private sector" rather than done in-house by folks who know what the goal is and have to live with the results themselves.

Perhaps. What I would *really like* would be the ability to renew my
license for say thirty years. That way I wouldn't have to worry about
forgetting about it.

Anonymous Man of Cancer, I answered that with the following post
on 11 January 2005 -

======

In article <crt90anme1@news.hawaii.edu>, jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

>It's paid for with federal funds, thus it's part of the federal interstate
>highway system. It's no different from Interstate 405 in California: It
>begins in LA and ends in San Diego -- it never leaves the state yet it's
>yet it's still an "interstate."

Ooooo...going to lecture me about my local geography? :-)

Try Interstate FIVE as an illustration...begins at the Canadian border
goes all the way south through Washington, Oregon, California, ends
at the Mexican border. Over a kilomile long, takes two days to drive
at lawful speeds. Been there, done that, many times.

Gee, if I wanted a LECTURE on highways, I'd go to the AAA website
of my local auto club office...they give out free maps to us members.

>The semester begin tomorrow -- I'll be teaching a calculus class at the
>university campus (which is not a "junior college"), 8:30-9:20 MWF,
>Keller Hall room 403. The class is full but I'll let you register,
>if you think you can handle the class.

Oh, wow.... (a big Ben Stein "wowwww....")

So awfully nice of you, Mr. Petty Chief Ossifer. I'll just go on down to
the nearest ATM, withdraw a few thousand, cross the I-5 over to
Bob Hope Airport and fly over to the Islands...JUST...for the "pleasure"
of hearing you "lecture" on The Calculus! Oh frabjous joy...

>Go back and read my complete post, paying attention to the phrase
>"...technical best seller."

Go for it! "TECHNICAL" best seller! What year? And who was the
compiler of that gem of information? [was it a bookstore in Newington?]
You might try the ABA or some other book industry associations first
to verify some nonsense claim. Or take off your blinders. Whichever
is easiest.

I've only been USING technical books since 1960 and my first job
assignment as an electronics engineer responsible for new design.
The Green Bible, the Blue Bible, Millman & Taub, Henney, Petersen
and Weldon, Floyd Gardner, lots of names which are very familiar
in my small 30+ foot total length personal bookshelf right above the
immediate computer desk here. Since I already write for money
and know several authors (who work at that full time) plus book
store owners-managers, I have some acquaintenceship with the
professional book associations. Now, if you wish to LECTURE me
on "best sellers" of anything, I will invite you to pass gas on a
shuttle flight ("go take a flying fart") between islands.

===

I think you ought to get back to verifying the claim that the Islands
have ham stations at every police and fire station...or whatever you
wrote. [if you also "lecture" in English, somebody rated you wrong]

You might remind the state government to update their web pages
to show those gems of information...or is that "sensitive" info
for certain people's eyes only? :-)

Riiiight...I can just see a Billion-dollar tourist industry "relying" on ham
radio in Times of Troubles to keep their many lines of communications
going during all those natural disasters that beset the Islands all the
time. Riiiight...and there's no military on the Islands other than the
USCG...not even the USARPAC with their Army callsign ADA. :-)

>Accusing me of lying? Are you sure you want to commit libel?

Accuse a MATHEMATICS LECTURER of lying? Heavens no!

Let's just say you don' know no bettah, blalah. :-)

I wouldn't do such terrible things to a kind soul who got a Rhode
Island ham his own "FCC mailing address" in Hawaii.

By the way, how is Mike Deignan? Still busy with all those "ham
clubs" he had callsigns for?

Don't take any wooden pineapples...

Brian, they didn't have to calculate anything. Having taken and passed the U.S. amateur radio license code test, they knew intrinsically all about the Space Business and pioneering of the radio arts. [Hams had invented astronomy, you see...]

Legend has it that when J.P. was Serving His Country teaching the poor ignorant children of Redbank all about mort's code, he would jog along the highway leading to Fort Monmouth. He might have given the GIs on the post bus the one-finger salute but he could smile to himself as he passed Coles, Evans, and Squier Laboratories...hams were busy inside keeping our country safe, serving the Signal Corps with the very best CW equipment there could be. Those hams KNEW all about the planetary positions given out in daily bulletins from W1AW.

Without hams we could only fish around and beef...

Did dit

Well Hawaii did get hit by a big hurricane about 10 years ago.
Some of the smaller islands took it the hardest, and hams
on 2 meters were the only surviving communications for a
short while. Between islands. Doesn't happen every day though....

You're on your own now. I mentioned that our Oahu hospitals had amateur stations manned by licensed hospital staff. But because of your inability to use a search engine you doubted those stations existed. I verified the fact by providing a site for you, which you apparently devoured:

> You might remind the state government to update their web pages

...but instead of saying "Thanks, Jeff; you were correct and I was wrong again," you hide your error by resorting to sarcasm:

> [if you also "lecture" in English, somebody rated you wrong]

Always the same thing -- you're proved wrong but instead of admitting your error you play the attack again.

One wonders how many times you've been divorced; I can't imagine that any woman would remain with you for long.

>>> MHz. :-)

> With the correct integer divisor and correct integer multiplier, it
> comes out to 500 KHz fairly exact.

"Fairly exact"? What's that mean?

Any repeating decimal can be written as a rational number, a/b.
That particular decimal above is exactly 315/88: Set that decimal
equal to N. Since two digits repeat, multiply both sides of the
equation by 10^2; we now have: 100N = 357.9545454... Next, subtract
the first equation from this second one; all the repeating 54 pairs
cancel due to this subtraction, giving us 99N = 354.375, a
terminating decimal. To eliminate the decimal point, multiply
both sides by 1000: 99000N = 354375. Now divide both sides by
99000: N = 354375/99000. This fraction simplifies to N = 315/88.
Hence, that original repeating decimal, 3.579545454... is exactly
equal to 315/88.

Note that if you have a repeating decimal with 3 repeating digits,
you'd multiple both sides of the initial equation by 10^3, etc.

"continually try to put those who are against the morse code test"? Put them where?
>
> Those "PCTA extras"

Who are they, Len? Specifically? Use callsigns because names aren't necessarily unique.

> persist in claiming turf on who should
> direct EVERYTHING about U.S. amateur radio - including all
> federal regulations thereof - just because of tenure as an
> amateur or because they feel they "own" the hobby and are
> somehow "entititled" to be of the noble calling of amateurism.

Where, specifically, has this been claimed? By whom?

Perhaps you and N0IMD have very thin skins...;-)
>
> PCTA extras imply they are "superior" about everything and
> are busy trying to shove out the NCTAs from this newsgroup.

Really? You're the only person here I've seen tell another to "shut the hell up".

You imply your own superiority in all things here ;-) ;-)

>>You are entitled to believe that the ground a military person
>>walks on is sacred and that no one else is "entitled" to the same benefits
>>from the United States as a person who has served in the military.

You're also entitled to believe that the moon is made of cheese. Or that the earth is flat.

Or that your lifelong avoidance of Morse Code has some relevance to amateur radio policy.

> You are off on your own fantasy there.

Naw, Len, she hit the nail really square.

> Brian Burke served in the
> USAF, overseas. I served in the US Army, also overseas, and
> specifically in radio communications. It is safe to say that we are
> both proud of serving our country.

As you should be. Others feel the same way about *their* military service, too.

But is the military the only way a citizen can serve our country? Or are there other ways? Does it have to be "overseas"?

> What has grown into this overlong thread is a bunch of NON-
> servers who imply that they are "superior" in all respects to those
> of us who served but who are not favoring any morse code test for
> U.S. amateur radio licenses. Further, those same NON-servers
> imply/claim that Their knowledge of the military and government
> is "superior" to Brian and myself.

"Superior in all respects"? Who has claimed that? Where have they claimed it?

Seems to me you just take any opposition to your opinions as an insult.

> It gets worse when an ex-serviceman (a PCTA extra)

Who?

> brags of
> his "seven hostile actions" yet cannot identify their where or
> when,

N0IMD won't give any details about his /T5 operation, yet you accept it as fact. "Leo" won't even identify himself, but you have no qualms that his claims are valid.

Yet you question a fellow serviceman's military experience. Odd.

> AND has NO claimed experience in any specific radio
> communications, AND falsely accuses others of "dishonoring"
> their military unit members.

Maybe he's just pulling your leg, Len. ;-)

You know, the way you "pull his leg" by calling him "nursie", "murine" and many other names, and referring to him in the wrong gender.

> That individual has NO displayed
> knowledge of military radio communications, networks, or
> regulations thereof (see the specious claim that "MARS

> >>IS<< amateur radio" instead of the Department of Defense).

Is he entitled to that opinion, Len? Or are only opinions you agree with allowed to exist?

> On top of that this individual continually uses Yiddish pejoratives
> as personal insults despite having no knowledge of Yiddish nor
> of central European languages.

Perhaps he's just using sarcasm to make a point, Len ;-) ;-)

Did you know that Colin Powell is fluent in Yiddish? It's a fact.

Len, you go on and on about Morse Code and Morse Code tests even though you have no demonstrated practical knowledge of either. ;-) ;-) ;-)

>>You are
>>entitled to believe that we don't all, in some form or other, contribute to
>>the integrity, continuance, and strength of the United States--some of us by
>>just damned getting up out of bed every morning and going to some dorky job
>>where a damned good portion of our income goes to supporting the military,
>>and the government, and the "other" people (you know...those who are not
>>worthy)...

Little sarcasm there, in case you missed it, Len. But Kim got it right - again.
>
> Well, you claim, solely by birthright, that you are "entitled" to MORE
> than those of us who spent years in the military, serving our country
> the best way we could? All because you did NOT serve yourself?

More? Where do you get that, Len? Kim just is saying that everyone contributes. Don't you agree?

Or don't "non-servers" count for anything at all? Perhaps you would like to call them "unpersons".
>
> That's a remarkable claim of "citizenship" which you wear. It is not
> an article that I wish to put on at any time.

I see. You think some citizens are more equal than others. Oink, oink ;-) ;-) ;-)

W4NTI served our country in Southeast Asia. In the military, during a war. Yet you threatened him with your "ounces of pressure" post.

K8MN served our country in Southeast Asia. In the military, during a war. He also had a long career serving our country in the State Department. Yet you repeatedly insult him because of his last name, denied his knowledge of State Department communications, and have told him to "shut the hell up" in your classic "feldwebel" post.

KH6O served our country in the Coast Guard. (I don't know if he's still active-duty). Yet you don't consider maritime communications on the largest ocean of the planet to be "big time radio". He's also a teacher at the

university level. Yet you repeatedly insult him and his service, most clearly in the your classic "sphincter" post.

There's a lot more...
>
> About the only thing that can be said about the extreme polarization
> in here is that the PCTA extras must certainly believe they are so
> damned "superior" in radio BECAUSE they took and passed a
> civilian amateur radio morse code test.

They're superior to you in Morse Code skill, Len. And in amateur radio experience. The rest of the difference is a matter of opinion. I'm superior to you in many ways. You are superior to me in some other ways (tapdancing around the facts, for example).

Deal with it, pink boy ;-) ;-) ;-) ;-) ;-)

However, you've shown that no matter what military service, education, employment or other accomplishment someone has, you'll make fun of them and their accomplishments if they dare to disagree with you. You'll even say they are lying about the accomplishments, without any evidence.

Of course you're not a stickler for evidence anyway, as shown by your demanding an age limit of 14 years for amateur radio licenses, without any evidence that the licensing of young people causes problems. And without any demonstrated practical experience with young people ("teeners", you call them?)

So there's no point in anyone mentioning their education, military/government service, employment, etc., around you, because you'll just insult it and say it's inferior.

> Yes, that's the ticket.
> Moresemen are always "superior." They say so all the time.

"Moresemen"? You mean "Morris men"?

> All
> others must bow down to them. They are royalty.

Or maybe they're using sarcasm and leg-pulling on you, Len. ;-) ;-) ;-) ;-)

Can't you deal with a little strong opposition? ;-) ;-) ;-) ;-)

> But, they are still AMATEURS in radio. Try to remember that.

And you're not one of them. Your Extra is still in its box.
>
> Even when those PCTA extras expound on socio-political issues
> that don't even come close to U.S. amateur radio or its policy,
> they remain superior and aloof to all NCTA.

Tug, tug! ;-) ;-) ;-) ;-) ;-) ;-) ;-) ;-)

Here's a clue, Len: You're not the newsgroup moderator.

>>So, yeah. I asked. And, I should have known better...

> Quite true.

> But, you have aligned yourself with the PCTA extra mob in here.
> As a friendly suggestion, wear some armor next time and the
> severity of newsgroup wounds won't cause so much apparent
> psychological trauma.

Somehow I think Kim's a bit tougher than you are, Len. ;-) ;-) ;-) ;-) ;-) ;-) ;-) ;-)

Oh, btw - your buddy Mike Deignan is *against* code testing. At least that's what he told FCC back in 1999.

> Dave K8MN

Depends on which "Intrastate" Highway you're speaking of, "Dave":

http://www.co.palm-beach.fl.us/mpo/pdf/FDOT_Publications/fihs%20modal%20needs%20plan.pdf
will get you some information on the Florida Intrastate Highway system;

http://www.rtpnet.org/ncatr/htf_summary.html mentions something for North
Carolina;

If you'll take a look at fourth bullet on
http://www.goodtimber.net/directions.html, they actually WARN of not getting
confused between the INTRAstate and the INTERstate;

In the second paragraph of SB 1166 on
http://www.calcog.org/_private/SB%201166.htm, the last line mentions their
INTERstate and INTRAstate highway system;

I am sure there's more to the search at
http://www.altavista.com/web/results?itag=wrx&q=intrastate&kgs=1&kls=0, but
I don't have time to satisfy your curiosity.

No, I don't tell all the fellas they're sorry-assed bastards. Only the
sorry-assed bastards. So far, you are in a minority of...let me count...oh,
yeah, ONE.

Interesting concept - renew for your expected lifetime?

IIRC, Japanese amateur radio operator licenses never expire, and
Canadian amateur licenses expire when the licensee is 125 years old. Or
something like that. In any event, their license terms are so long that
they outlive the licensee. One problem with doing that sort of thing
here is being able to reissue callsigns.

Much easier to not put a name or face on the evil "PCTA Extras". Makes
it a lot easier to demonize them. Fact is, of the Extras in here who are
PCTA, there are a lot of different personalities, from abrasive to mild
mannered.

One cannot stereotype a spectrum easily.

Depends on which side of the Morse code issue they are on. In fact,
considering the number of insults hurled at various people who have done
Military service and happen to be PCTA, I would have to conclude that
Len does *not*' show respect for military service.

Speaking of the Coast Guard, I wonder how much guts it takes to go out
in one of those rollers and spend a little quality time upside down,
while trying to rescue someone. That has to be an *intense* Sphincter
pucker moment!

What many Administrations do is to issue as lifetime operator
license and a station license renewable by paying a fee and
getting a validation sticker just like an auto license plate.

Just a reality check. This morning I checked the newsgroup and seven threads appeared. Of the seven, four were responses to Len.

If you don't like seagull dropping on your car when it's parked at the marina, don't feed them. They will eventually go away. That's why the sign says "Don't feed the seagulls."

The subject line says it all. He WILL eventually go away.

Now Jeff! You KNOW that Lennie gives us PLENTY of stuff with which
to humiliate him over!

We are still having a pretty good giggle over his NG faux pas over
license expirations and the subsequent attempts to wriggle out from
under it. Wudda been a lot easier (and would have garnered some
respect) to just say "Ooopsss....I was wrong."

But...You know how it is for pathological liars...gotta lie for
lying's sake!

Very true, Mike.

But I think Len just doesn't like to use our callsigns.

> Fact is, of the Extras in here who are
> PCTA, there are a lot of different personalities, from abrasive to
mild
> mannered.

Same goes for NCTAs.

For example, I've had many detailed discussions with K2UNK, yet there's never a harsh word, even though we're poles apart on most amateur radio policy issues. Heck, K2UNK is a *director* of NCI!

> One cannot stereotype a spectrum easily.

That's why Len denies there is a spectrum. All are blamed for what someone
supposedly did decades ago.

Unless the person is NCTA. And sometimes not even then.

> >> AND has NO claimed experience in any specific radio
> >> communications,

This is not true. The person being described here, if it's K4YZ,
has lots of "claimed experience in specific radio communications".
For example, I've worked him on 40 meters.

Of the people named in this post, K8MN has probably the most experience
in military and government service. Yet Len shows no respect for him.

I recall a series of postings some years back where K8MN described using Morse Code to "synchronize" (as in coordinate) RTTY operations for the State Department - as a State Department staffer. Len simply refused to accept that such things were done in the time frame K8MN describes. Never mind that K8MN was there and Len wasn't.

One of my favorite images of the USCG shows a stormy coastline in the Pacific Northwest. Vessels of all descriptions are heading for the harbor as fast as they can - except for the USCG ones, which are headed out into the storm the others are fleeing.

Kinda says it all.

Mike, if you haven't read KH6O's writings about his experiences, do a search and have yourself a treat.

The problem with that scheme is that you still have to remember to
renew the thing, and it still takes admin work.

In Japan, the station license needs to be renewed annually and costs
120 yen, last time I looked. There's an enormous difference between the
number of JA operator and station licenses as a result.

Yeh, the reusable callsign is a hot button at the FCC.
Powell has a special committee looking into it.

I know. You don't even have enough time to read the posts. Allow me to
reinsert a statement I made to you the other day:

"If it has a red, white and blue sign with I-something,
I can assure you that it isn't part of the 'Intrastate'."

Intrastate highways weren't under discussion (except by you).

> No, I don't tell all the fellas they're sorry-assed bastards. Only the

Oh, I've read the nice things you've said to various folks here over the
years. W4NTI and Larry Roll have been on your hit parade for ages. You
don't have to play like I'm someone special.

By the way, aren't you, Alec Baldwin and Clint Eastwood all supposed to be gone?

It seems that you entered the conversation with the confusion when you
responded after Jeffery Herman wrote:

It's paid for with federal funds, thus it's part of the federal
interstate highway system. It's no different from Interstate 405 in
California: It begins in LA and ends in San Diego -- it never leaves the
state yet it's yet it's still an "interstate."

By the way, the Yahoo url with all of the swell information about
intrastate telephone calls was most helpful.

It has to be much more intense than the sphincter-tightening moment
which comes about as a result of artillery shelling one didn't
experience (see the classic "sphincter post" by Len Anderson). :-)

Heh heh heh...as "exact" as you can calibrate it to some
accepted standard of frequency.

Hint: It isn't W1AW. :-)

>Any repeating decimal can be written as a rational number, a/b.
>That particular decimal above is exactly 315/88: Set that decimal

>99000: N = 354375/99000. This fraction simplifies to N = 315/88.
>Hence, that original repeating decimal, 3.579545454... is exactly
>equal to 315/88.
>
>Note that if you have a repeating decimal with 3 repeating digits,
>you'd multiple both sides of the initial equation by 10^3, etc.

Suggestion: Why don't you expound over in the math newsgroup?

On the other hand, how would you get a "fairly exact" color burst
oscillator on-frequency and keep it that way?

You have to understand the ELECTRONICS part in order to do
that. That ties into "RADIO." Get the connection? It's peachy
keen to know all about continuing fractions and stuff but let's
look at the number "88." Factoring it out results in an 11.
If you are generating, say a color burst frequency, that 11
would be in the numerator, not the denominator. That implies
a MULTIPLIER of 11. [ever have to build a frequency

multiplier?] A multiplication of 11 is a bit hard to do even
though GE (among others) solved it with tubes back about a
half century or so in the past. [I can tell you how they did it
even if it isn't explained in the ARRL Handbook]

Hint: 56.818 181 818 ... KHz is involved. How?

The numbers only APPEAR to relate, but the numbers aren't
oscillating and generating RF. Try to stay focussed HERE.

So...how much RF have you done up at Ku-Band territory?

You have a lot of nerve calling anyone mentally screwed up, Doug.

Questions:

1. How is the court ordered shrink working out for you?

2. How's the court ordered job hunt going?

3. How's the court ordered wage withholding going?

4. Have you made the rain report for jamming repeaters again, Doug?

5. Have you threatened to kick anyone elses ass, only to have them show
up at your section 8 slum and prove what a fucking coward you are, maggot?

Go lay down by your bowl, dogie.

Source record: 101895

\

These are the numbers of current, unexpired amateur licenses held by
individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of January 14, 2005:

Novice - 29,620 (decrease of 19,709)
Technician - 263,663 (increase of 58,269)
Technician Plus - 53,742 (decrease of 75,118)
General - 138,083 (increase of 25,610)
Advanced - 77,798 (decrease of 21,984)
Extra - 106,100 (increase of 27,350)

Total Tech/TechPlus - 319,405 (decrease of 14,849)

Total all classes - 671,006 (decrease of 3786)

Note that these totals do not include licenses that have expired but are in the
grace period. They also do not include club, military, RACES or other
station-only licenses.

You'll note that Len hasn't bothered to entertain folks in rec.radio.former.professional or alt.war-stories.half-century.

He often tells others that they "aren't the moderator in here". It doesn't stop him from attempting to be "the moderator in here". Fact is, Len's a tired old piranha in his eighth decade. He has, depending upon the season of the year, a decades-old interest in amateur radio or no interest in obtaining an amateur radio license.

He chides others for "living in the past" but regales us with tales from his military experiences of fifty plus years ago or from his working days. Stories from others with equal or more experience are dismissed and ridculed.

He writes of denigration and insult by others but he dishes out heaping helpings of it toward others. A few things remain clear:

1. Len isn't part of amateur radio; he has no amateur radio license.

2. Len isn't likely to obtain an amateur radio license with or without a morse code exam--ever.

3. Len has some sort of issue with those who have accomplishments in amateur radio and who are proud of them. These people, he defines as "overly proud".

4. Nobody can have more experience or knowledge than Len in radio, electronics or the military.

5. Len is the only person on the planet who knows what "message knuckles" are.

You mean by supporting continued code testing for an amateur radio license?

If so, then what's the problem? Your demands that the code test be removed mean
that *you* "want to enforce your personal desires on everyone else"

> and think "you" are some kind of Keepers of a Covenant (of
> some imagined god-inspired "service").

Not at all, Len. We simply think that dropping the code test would be a
lowering of standards.

Is there something wrong with that?

> All because you met some
> test requirements long ago, established by other Keepers of an even
> older Covenant and are firm Believers in the Church of St. Hiram.

You sure do pontificate on other's motivations.

> As usual, you olde-tymers are caught in the territorial imperative
> emotionalism of a personal activity and want to enforce your

> personal mindsets on all others.

What's your suggestion, Len?

Should amateur radio become like cb? You were a cber, once. You said it was a lot of fun. Are you still a cber? Or did that service stop being fun for you?

You've told us about your home and how much it is worth and how close you are to a gated community of homes costing much more. Would you like it if someone wanted to change the zoning in ways that might make your property less valuable, reduce your enjoyment of it, etc.? I bet you would be caught in a territorial imperative emotionalism of a personal activity and want to enforce your
personal mindset on others.

> Not a good thing since the FCC
> is not chartered by law to be a reflection on "your" personal desires
> nor in the maintenance of a living museum of amateur radio antiquity.

That's *your* mindset speaking

> Insofar as radio regulations go, the "ARS" does not stand for
> Archaic Radiotelegrphy Service.

Then why do you use the term?

> Removal of the morse test does
> NOT "dumb anything down"

That's not what I wrote.

I wrote that it would lower the standards. And it would.

Besides, amateurs *do* use Morse Code extensively. Therefore, it makes sense for a test of basic Morse Code skill to be part of license qualifications.

It's really that simple.

> but rather makes the amateur hobby
> more open,

In case you didn't notice, Len, there's been a no-code-test class of amateur radio license here in the USA for almost 14 years.

> freeing it from all the tight confines of an imagined
> "amateur profession" with all the rigid, inflexible standards and
> practices that date back to seven decades ago.

Where do you get that, Len? Do you think hams stopped using Morse Code seven decades ago? You're wrong about that.
>
> "You" don't own anything but your own radio equipment in amateur
> radio.

Never claimed to. But that's more than you own ;-)

What I and other amateurs *do* have is something to lose. If changes in the rules mess up amateur radio, then we have lost something. Do you think we don't have the right to preserve what we think is valuable?

> "You" do not have any "power" to prevent non-amateurs from
> communicating with their government on federal laws and regulations.

That's right. Nor has anyone I know of tried to do that. You can spam ECFS all you want, Len. That's the right of *every* interested party.

OTOH, I'm not the one telling others to "shut the hell up, you little USMC feldwebel". You are.

> "You" olde-tymers have no claim over others on "rights" or anything
> else.

What does that mean? Are you telling me to shut up?

> Try to conduct yourself appropriately when faced with reality.

Whose "reality", Len? You mean your opinions and mindset, that you want to impose on everyone else?

Here's a clue: *Everyone* has a right to their opinions. And a right to express their opinions. That means you - and me. That means folks who are oldtimers and newcomers, "servers" and "nonservers", licensed and not licensed, etc.

In the end, Who cares? It is our newsgroup, and if you and I want to
talk about politics or an obscure Kert Vonnegut story, or if Bria wants
to talk about the boy scouts, or if Len wants to talk about sphinctors,
then "it's all good, man". I like the little side trips. It allows us to
get to know each other better.

Every time that Len speaks od Saint Hiram, it reminds me of the old
cartoon Fearless Fly. Mild mannered Hiram Fly was his alter ego.

Why all the fuss over a fly? 8^)

Bingo! From my limited observations, the testing regimen as it exists
today is not dumbed down from what it used to be. Every once in a while
someone trots out an old test question that leaves a lot of us stumped.
But it's just different, not harder.

But to argue that elimination of Element one is not lowering the
standards is just plain wrong. Doesn't matter if you think it is the
right thing to do or not, it is most assureadly lowering the standards.

And I don't think lowering standards is ever the right thing to do.

And..... How many of those people that took the no-code tests just
allow thier licenses to expire?

The no-code license allows priveliges in most of the amateur
allocations. HF is just a small part of our portion of the spectrum.

>I'd recheck the math, Jim. 120 yen isn't even $1.00 I doubt that
>the Japanese governent is quite that generous!
>Perhaps Y120K...?!?!

Could be, Steve, I'm a little rusty on exchange rates.

In any event, while JA operator licenses are free and last longer than the licensee, station licenses are a yearly renewal. Only an active amateur with his/her own station bothers with a station license, because one's operator license allows a JA ham to use someone else's station anyway. And a ham with only an operator license can always get a new station license (new callsign, though).

Japan is a very interesting case study in the no-code-test argument. Japan has had no-code-test ham licenses *with some HF privileges* for several decades now. This fact is cited as the reason why there were so many hams in Japan relative to the size of the country. Even though Japan has less than half the US population, the number of JA hams (station licenses, not just operator licenses) exceeded the number of US hams more than 30 years ago. Since more than 90% of JA hams have no-code-test licenses, no-code-test proponents used to hold up Japan as an example of what the US should do. (Japan used a rather torturous argument to get around the treaty - their no-code-test ham licenses are QRP on HF, and Japan is an island, so the claim is that there's no interference problem.

But since about 1995, JA ham license numbers have been in a downward spiral. Not just total number of station licenses but number of new licenses, operator and station. Some say the decline is due to factors like the poor state of the Japanese economy and/or the popularity of other electronics communications like the internet, cell phones, etc.

IIRC, Japan still has code-testing for all but the fourth class license, even though the treaty changed more than 18 months ago.

Absolutely, Mike. I don't think I ever conciously thought of it that way,
but you're quite right (about getting to know each other better)

And seems to me I remember the name of the NG being something to do with
"Amateur Radio". Ironic then that we don't find any record of THIS Leonard H.
Anderson being a licensed Amateur. (There was another fellow who is now SK...I
don't think you were here when I pointed it out and Lennie went BESERK over the
idea that it MIGHT be him! Heaven forbid!)

>>> All because you met some

The only fly Lennie ought to be concerned with is the one he keeps leaving
unzipped in a public forum...There's laws against that!

>>> As usual, you olde-tymers are caught in the territorial imperative
>>> emotionalism of a personal activity and want to enforce your

> Which is odd considering the rest of us aren't supposed to talk about
>off topic matters!

Of course, Mike! YOU aren't Lennie! If you were, you, and ONLY you would be allowed to act as the moderator of an unmoderated newsgroup, would be allowed to discuss anything you wanted to irregardless of thread topic (without expectation of redirect to the topic) and YOU and ONLY you would be allowed to denigrate, disparge and otherwise verbally insult and abuse others regardless of how they treat you and then claim to be the "vicitm" whenit got fed back to you!

> The no-code license allows priveliges in most of the amateur
>allocations. HF is just a small part of our portion of the spectrum.

Actually it's just a hair over 4% if you include 160 meters. A grand total
of 3.75Mhz of bandwidth plus the five 60 meter "channels". The six meter band
alone is wider than all of our MFHF spectrum.

>>> freeing it from all the tight confines of an imagined
>>> "amateur profession" with all the rigid, inflexible standards and
>>> practices that date back to seven decades ago.

If all of Lennie's other misrepresentations and deceit weren't enough,
that paragraph right there would be enough to convince any other person who is
even marginally well informed on Amateur Radio matters that Lennie is an idiot
and antagonist of monumental proportion.

>>> "You" do not have any "power" to prevent non-amateurs from

What was the final count..?!?! 17 "responses" to various commenters, most
of which were "cookie cutter insults" on the motives or character of the
respondents?

>> OTOH, I'm not the one telling others to "shut the hell up, you little USMC
>> feldwebel". You are.
>
> Or to insert things in some sort of I/O port; or to engage in self
>fornication.

Lennie just wishes he could remember the last time he engaged in ANY
mutually gratifying sexual act. As for the "self" part, I am sure he wished he
remembered WHERE the parts were to fulfill same!

>>> "You" olde-tymers have no claim over others on "rights" or anything
>>> else.
>
>> What does that mean? Are you telling me to shut up?

That's a Lenniesque effort to bring us down to his level. Lennie can't
bring himself to take the same tests every current new Amateur takes, so he
must bring all 600K+ of us down to him!

>>>Try to conduct yourself appropriately when faced with reality.
>>

>> policy issues. Heck, K2UNK is a *director* of NCI!

>Yes, same here, although I believe I got him pretty irratated a few
>times. THat's okay, because I'm an irratating person some times! 8^)

Yet even when irritated, I cannot recall K2UNK ever calling people names or
turning a difference of opinion into a personal attack. The closest thing to it
was when we were discussing highway speed limits and Bill referred to "safety
Nazis" as one source of the 55 mph rule. And IIRC he apologized for that,
later.

>>> One cannot stereotype a spectrum easily.

>> That's why Len denies there is a spectrum. All are blamed for what
>> someone supposedly did decades ago.

> Perhaps there was some sort of prenatal terror induced by a Ham?

Could be. Len appears to have been bested in a debate by KH2D, and so now takes
out his vengenance on all who resemble KH2D in any way that's significant to
Len.

>>>>> persist in claiming turf on who should
>>>>> direct EVERYTHING about U.S. amateur radio - including all
>>>>> federal regulations thereof - just because of tenure as an
>>>>> amateur or because they feel they "own" the hobby and are
>>>>> somehow "entititled" to be of the noble calling of amateurism.

>>>>Where, specifically, has this been claimed? By whom?

>>>>Perhaps you and N0IMD have very thin skins...;-)

>>>>> PCTA extras imply they are "superior" about everything and
>>>>> are busy trying to shove out the NCTAs from this newsgroup.

>>>>Really? You're the only person here I've seen tell another to "shut
>>>> the hell up".

450. DO YOU WANT TO OBTAIN MANY DOLLARS?

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-16 21:17:17 UTC
From: darting@latinmail.com
Message-ID: <e12fe651.0501161317.74f0b6cd@posting.google.com>
Source record: 101966

YOU WANT TO OBTAIN MANY DOLLARS ?
I've been trying to figure out the way to make extra money in the internet, checking news groups and ads. It's not easy but I try to keep an open mind to opportunities. In these websites you would find messages like the one described further below. The message got me thinking:This is just a chain, I don't buy it. But, what if it works? It's not something new. People have been doing it for decades and I've never heard of anyone that have acctually made some money out of it. But, what if it works? When you really think obout it, this is a real job. I finally made up my mind and here I go. If you made up yuour mind too, or if you're still giving it a little more thought, keep reading. It won't be easy. Putting this message on every single website that you can think of, like news, newsgroups and ads will be necessary. The more you do it, the better for you (and for me too, of course), that's why it's a real job. It'll take several hours of advertising and promoting.
This chain is different because it doesn't deppend on five or ten persons to whom the masseges would have to be sent by tradditional mail. With the internet, the message is sent worldwide, available to thousands and someone (like me) it's going to go for it. Finally, did you think how much you're going to learn from this kind of task so you can use this knowledge on future jobs or projects?
Now my name is the last one on the list, where, if you decide to go on, you'll put yours at the end leaving my name as the one before last. I wish you good luck, because part of this luck is for me too.
This is the message I found:
"A few days back, when I was visiting news websites, just like you are now, I saw an article, very similiar to this one, saying you can make thousands of dollars in just a few weeks by investing only US$6ï¿½ï¿½! I thougt: "Oh no! Another fraud?" But just like most of us, I got very curious and I kept reading. The article showed six names and addresses for you to send US$1ï¿½ï¿½. Then, you have to write your name at the end of the list replacing the one on #6 and send the article to at least 200 "newsgroups" (there are thousands of these all around the world). There's no trick, that was it.
The big difference between this chain system and others is that you have a list of six members instead of five. This means that your average proffit will be fifteen times higher!!! After thinking it through with my friends, I decided to give it a try. After all, I had nothing to lose but six stamps and US$6ï¿½ï¿½, right?
I was worried about the whole thing being legal, so I contacted the Correo Central de Chile and they confirmed this chain is completely legal!!
So I invested my US$6ï¿½ï¿½.....GUESS WHAT!!!... seven days later, I

started to recieve money by mail!!! I was really surprised!!! I still thought this would end in a few days, but the money kept comming!!!
The first week I made from US$20ï¿½ï¿½ to US$30ï¿½ï¿½. By the end of the second week, I had made a total of US$1.000ï¿½ï¿½!!!!! By the third week I got more than US$10.000ï¿½ï¿½ and I was getting more. This is my fourth week and I've made over US$41.000ï¿½ï¿½ and It's still comming (my family spend the time opening the envelopes and I spend my time finding "newsgroups"). This is getting serious!!!
At the end, it really paid the US$6ï¿½ï¿½ and six stamps investment. I sure spent more on lotto!!!
Let me explain how it works, and most of all, the reason why it works so well. Make sure to print a copy of this article RIGHT NOW so you can get all the information needed.
It's a very simple 3 step process:
STEP Nï¿½1: Get six pieces of paper and write this down on everyone: "PLEASE INCLUDE ME IN YOUR ADDRESS LIST OR E-MAIL." Now get six US$1ï¿½ï¿½ bills. Then, fold the papers and put the one dollar bill in each so it won't be seen through the envelope. It'll be better if you cover the bill with a dark color paper so it won't be stolen. At the end you'll have six sealed envelopes with six one dollar bills enclolsed. By doing this you're creating a "service" which makes it ABSOLUTELY LEGAL!!!
Send the envelopes to the following addresses:

1. Oscar Javier Rodrï¿½guez z
CR 31 # 45 - 23 barrio el triunfo, Villavicencio Colombia

2. Jorge Balcï¿½zar
Convento San Juan de los Lagos Nï¿½ 36, Jardines de Santa Mï¿½nica, C.P. 54050, Tlalnepantla, Estado de Mexico, Mï¿½XICO

3. Marco Vinicio Gramajo Leal
2a. Avenida 4-66 Zona 1, Mazatenango Suchitepequez, Guatemala, Centro Amï¿½rica.

4. Ricardo Portillo Arteaga
Calle Gonzalo de Berceo Nï¿½ 52 piso 2ï¿½ letra B, codigo postal 26005, Logroï¿½o - La Rioja, Espaï¿½a.

5. Javier Piï¿½eros Barreto
Carrera 72 No 62 f 33 sur, manzana 2 entrada 3 apto 102, Urbanizaciï¿½n Calabria, Bogota Colombia,

6. JAVIER DARIO ARENAS
Apartado postal : 243003
ADPOSTAL: Palmira - Valle Del Cauca - Colombia
Email: adarting@hotmail.com o darting@latimail.com

STEP2: Remove name #1 of the top of the list and move the other names one number up (#6 becomes #5 and so on), add your name and address as #6. REMEMBER, YOU MUST REMOVE #1 NOT #6, MODIFY THE NUMBER ON THE REMAINING NAMES AND ADD YOUR NAME AND ADDRESS TO THE LIST AS #6.

STEP3: Change all those things you consider to be changed in this article, but try to keep it as close to the original as possible. Now put your article on at least 200 "newsgroups" (there are more than 24.000 groups). Just search in google.com by the keyword "newsgroups" and you'll find more than 56.000 items. You just need 200, but the more you put the article on line, the more money you'll get!!
These are instructions to get into the "Newusgroups":
Nï¿½1 Since you must have your own article, there's no need to write it all over again. Just select the whole text and use the "copy" function from the "edit" menu.
Nï¿½2 Create a "notepad" file and "paste" the text, also using this function from the "edit" menu. Now you have the text as a notepad file and you can add your name and address as #6.
Nï¿½3 Save the text as a .txt file. This will make It easier for you to make chages on the text whenever you want.
FOR THOSE WHO USE NETSCAPE
Nï¿½4 In the Netscape browser go to "window" and select "netscapeNews". Then, select "options" from the menu and then selct "show all Newsgroups" so you can get the list of all the "Newsgroups" in the server. Click on any of the newsgroups, and then click on "TO NEWS", it should appear at the top on the left. This will lead you to the messages box.
Nï¿½5 Fill in that space. That will be the title everyone will see when visiting any group.
Nï¿½6 Copy your article and paste it there. Go back to the Newsgroup and "TO NEWS" and you'll be creating and pasting inside the program or "posting".
Nï¿½7 Click on "send" AND YOU'RE DONE!..CONGRATULATIONS!!
TO THOSE WHO USE INTERNET EXPLORER
Step Nï¿½4 Go to Newsgroups and select "Post an article".
Step Nï¿½5 Load the article
Step Nï¿½6 Repeat step Nï¿½6 for the Netscape users.
Step Nï¿½7 Press "Post"
THAT'S ALL! All you have to do is search for different Newsgroups. After a few loads, It'll take like 30 seconds to put the article in each newsgroup!
Eventually you might want to get a P.O Box ‘cause you're gonna get a great ammount of envelopes. You can also use a nickname as long as the address is correct. MAKE SURE THAT ALL THE ADDRESSES ARE CORRECT.
Now, let's check the numbers:
Supose I only get 5 answers out of 200 sent messages (which is a really low example), then I made US$5ï¿½ï¿½ with my name as #6 on the list. Now, if everyone who sent me US$1ï¿½ï¿½ contact a minimum of 200 Newsgroups too, all of them with my name as #5 on the list, and just five answer to the 5 original messages, I'll get US$25ï¿½ï¿½. This 25 persons put my name as #4 on a minimum of 200 Newsgroups getting just 5 answers I'd be makin another US$125ï¿½ï¿½. Then, 125 persons put my name as #3 on a minimum of 200 Newsgroups, again getting just 5 answers, I'd be getting another US$625ï¿½ï¿½ and so on!! With my name as #2 I'll get US$3.125ï¿½ï¿½, and as #1, US$15.625!!!

Now, as I said before, getting only 5 answers is extreeme, the real average of answers is 20 to 30, so DO THE MATH!!!
Once your name is out of the list, get the last ad on the newsgroup and send the US$6ï¿½ï¿½ to the names listed and put yours as #6 and start all over!!
Just remember: Thousands of people all around the world surf the Internet every day reading the article just like you and me! So I think many of them wont see a problem on investing US$6ï¿½ï¿½ to see if it really works. I know that some will think, "what if no one answers?" No way!!! What are the chances that will happen, when there are millions of honest persons (like us) who need to pay bills, who are looking for financial independence and who are willing to give it a shot.
You can also do this by getting at least 200 e-mails. With this system, the probbability of success is 5% to 15%. Eather way you do it, always remember to be honest and I promaise you It will work.
Just make sure to print this article NOW. Try to keep a list to track all those who sent you money. Keep checking the newsgroups so you can see if everyone is playing fair. REMEMER, HONESTY ES THE BEST WAY TO GET WHAT YOU WANT. I've heard of people who sent the message with their names on the list but without sending the money and they hardly recieved any money back.
TIME IS IMPORTANT! Don't wait more than seven days from the moment you see this article! Let's follow the rules so we can all win! Don't forget to mention this extra money on your tax declaration. THANK YOU AND GOOD LUCK!

>the way things work on RRAP.

Brian, this newsgroup be DIFFERENT than any other newsgroup.

Everything gets redefined into what the PCTA extras want. It's
"their" hang-out, "their" little chat room where everything and
anything NOT involving morse code can be talked about, solved,
and all those against the morse code test can be defamed and
denigrated at their pleasure.

The PCTA extras are "superior." They get angry into hissy-fits
when some of us don't kiss their divine I/O ports.

>
>Go back and read my complete post, paying attention to the phrase
>"...technical best seller."

Tsk, tsk, tsk. YOU go back and point at the date and place it was stated that the ARRL Handbook became a "technical best seller." [sorry, the ARRL press releases, advertisements, etc. do NOT count]

>Accusing me of lying? Are you sure you want to commit libel?

In here? :-)

Heavens no. In here the PCTA extras redefine words and the
radio world and everything else into their own little fantasyland
desires. They are the "superiors."

"Libel" in here means to say bad things about morsemanship
and say bad things like trying to eliminate the amateur radio
license morse code test. In ANY OTHER NEWSGROUP you
would be guilty of lying. Not here. :-)

BTW, have you worked out the little problem in synchronizing
oscillator frequencies yet? Remember that numbers don't do
the RF generation. Real hardware does.

Herr Kommandant lives in an on-off world, either key down or key up.
He can't seem to negotiate understanding the in-between. :-)

>"""Tell us about amateur radio's role in an emergency."""
>
>They should do whatever they can with whatever they've got.

Correct. That would be logical.

However, das Kommandant bin a morseman for four decades
and can't understand that the amateurs "will" take over when
the government-commercial infrastructure fails in an emergency.
Some say that the infrastructure "always" fails. :-)

>"""I want to hear once again about how all of the infrastructure is
>never destroyed."""
>
>Sometimes it is, sometimes it isn't. Why do you say, "never?"

Der Kommandant ich bin pissed, he troll and troll his boot but
all his bouyancy tanks are flooded.

>"""The story I posted is in direct conflict with the song sung by you
>and
>your newsgroup mentor."""
>
>Dave K8MN
>
>Sorry, David, but I'm not very musical. I did sing "RockyRaccoon" once
>after ingesting some bad branch water. I feel much better now.

Der Kommandant wants to be Daddy Warbucks and have everyone
sing "Tomorrow" from the musical "Annie."

Unfortunately, the sun DID come out, and many years before. But,
struggling to work Frenchmen out of band, he was too busy to
notice.

Und zo, kleine newsgroupies, der Kommandant keeps snarling
black for white all the time as if he were In Charge. He has NO

verification that all amateurs can do as the ARRL states that all amateurs do, hasn't claimed he has done it hisself, and therefore tries to shift gears in his own shiftless way by going to extremes.

It's the usual old, tired bullshit by the PCTA extras: Attack the messenger when they can't send a reply on the subject.

>Which is odd considering the rest of us aren't supposed to talk about
>off topic matters!

We're supposed to do as Len says, not as Len does. Unless we support the
elimination of code testing, in which case we can do almost anything and it's
OK with Len.

>> Would you like it if someone
>> wanted to change the zoning in ways that might make your property less

>allow thier licenses to expire?

Nobody really knows. One reason the number of Techs/TechPluses is shrinking is
expirations like that. Another is upgrades. In another 5 years and 3-1/2
months, all the Tech Pluses will be gone.

>The no-code license allows priveliges in most of the amateur
>allocations. HF is just a small part of our portion of the spectrum.

Yep.

>And now we just may be approaching motive?

Yep. Notice how Len never describes in detail what he thinks the rules for the ARS should be. It's like a Zen exercise - he'll tell you what he thinks amateur radio license requirements should not be, but he won't tell you what he thinks they should be.

>>> "You" do not have any "power" to prevent non-amateurs from
>>> communicating with their government on federal laws and regulations.

>> newcomers, "servers" and "nonservers", licensed and not licensed, etc.
>
> Right on down to th ehumblest little Feldwebel and hocky puck. ;^)
>
Yep.

And now for the Very Basic Concept:

In the early days of radio, operation of any sort of radio set required considerable technical knowledge and operating skills. The level required was so high, and the equipment so fussy, that "radio operator" quickly became a speciality in itself. Professional radio operators did it for money, amateur radio operators did it for fun, but the skills and knowledge were needed to get the equipment to work at all. That's ultimately why licenses were required - to make sure those on the air had needed skills and knowledge.

Even operating a receiver took a lot of skill.

Over time, technological progress improved radio sets in all sorts of ways. Cost came down, reliability went up, all sorts of technical benchmarks were met and surpassed.

Some improvements were aimed at making the sets perform better. Other focused on reducing the level of skill needed to operate them. Compare a BC receiver from the early 1920s with one from the late 1930s, and the differences are striking. What was once a large, expensive, complex device running on batteries and requiring careful adjustment of multiple controls just to hear a local broadcast became a small box with only two controls.

Similar things happened in "two-way" radio, but over a longer time span. The goals were similar: improve the technical performance, and reduce the level of skill needed to operate them.

In the latter area, the ultimate goal was to completely eliminate the need for a skilled radio operator. In order for this to happen, operations were channelized, automation was incorporated to a high degree, and modes were chosen that did not require special operator skills.

A prime example of this is the land mobile radio services, using VHF/UHF FM voice. The first-generation sets were expensive and complex by the standards of the time - but almost anyone could use the sets. Push to talk, volume, squelch. Maybe a four-position channel selector. No tuning, no adjustments, clear FM audio. And no radio operator.

Almost all radio services have gone in the direction of "no radio operator needed", for the obvious reasons. Radio to them is a tool, not an end in itself. If the maritime folks could replace "Sparks" with an automatic system, they'd do it just to save Sparks' salary and benefits.

This is where amateur radio diverges sharply from other services, and becomes unique in many ways. Removing the skilled radio operator would eliminate what we're all about, which is "radio for its own sake". That's why so many hams want to keep the standards high. Because if they are lost, what's left isn't

amateur radio.

It's a very basic concept, this business of the skilled radio operator. Most if not all of the other radio services have eliminated them, or are trying to do so. Yet it's precisely what we hams aspire to be!

And it's precisely what Len either doesn't understand, or understands and wants to destroy.

Regardless of the specific reasons, they allowed their licenses to
lapse. If the no-code test system were any kind of success, there would
not be a falloff like that.

>>The no-code license allows priveliges in most of the amateur
>>allocations. HF is just a small part of our portion of the spectrum.
>
> Yep.

So the big question is why aren't those bands crowded with the
Technicians? It is worth noting that the 6 meter band is open to
Technicians also. So they can get some HF like action also. But they by
and large don't.

Code test good or code test bad, elimination of it will probably not
bring anything to the ARS.

If I were to hazard a deduction, I would have to say that from
everything I have seen, he is more interested in the destruction of
Amateur radio than anything else. I had concluded as much before, but
the diatribe of a few days ago was especially telling, in the ARS
license numbers thread, where he starts out with

Lenof21> Well, Herr Gruppekommandant, it's time to "show you my papers"
Lenof21> and confess all -

Lots of analysis fodder.

Of course she is correct in this case. The "service" argument is too
often thrown out as a way to stifle discussion. No one wants to look
like they don't support our servicemen and women, so more often than
not, the person just shuts up rather than risk the "unpatriotic" moniker
about to be thrust on them.

Yeh, we shouldov gone there, and we should leave on the last day of the
ultimatum.

Why?

Because I've yet to see a muslim government that give's a shit about
their people, but the people will remember who helped them. The guys
with the little American flag on their uniforms.

Not Miccolis.

old standards and practices in a radio hobby...and have for years
without going along with any change.

>> Unless we support the
>> elimination of code testing, in which case we can do almost anything and
it's
>> OK with Len.
>
> He probably wouldn't find it very interesting around here then!

On the contrary...:-)

If the code test were eliminated, I wouldn't bother to be here. :-)

>Code test good or code test bad, elimination of it will probably not
>bring anything to the ARS.

Tsk. The only thing the code test requirement did was to form
the ARS as the Archaic Radiotelegraphy Society. :-)

Plus a lot of puerile nyah-nyahs from those who could do morse
at high rate having playground glee at talking down to those who
couldn't. :-)

> If I were to hazard a deduction, I would have to say that from
>everything I have seen, he is more interested in the destruction of
>Amateur radio than anything else. I had concluded as much before, but
>the diatribe of a few days ago was especially telling, in the ARS
>license numbers thread, where he starts out with

Oh, my, aren't you the most Self-Righteous One! :-)

How does the elimination of the morse code test for a U.S. amateur
radio license, any class, suddenly "Destroy the ARS?"

Tsk. You should be reporting me to the Secretary of Homeland
Security or the Attorney General for all this "destruction!"

Yup, lots of Morsemen would be faced with "destruction" of the
ARS AS THEY KNOW IT if the code test were eliminated.
Woe! Great weeping and gnashing of gums on that.

>> Don't forget telling W4NTI he fills the target...
>
> That is one I would like to forget.

Not to worry. You simply can't remember that a PCTA extra
said the same to me, years ago, and relatively recently.

>> Almost all radio services have gone in the direction of "no radio operator
>> needed", for the obvious reasons. Radio to them is a tool, not an end in
>> itself. If the maritime folks could replace "Sparks" with an automatic
system,
>> they'd do it just to save Sparks' salary and benefits.

Tsk. The "autoalarm" was already in-place on many ships prior to
1941...including the North Atlantic fabled in much earlier tales of
morsemanship.

How many NON-essential crewmen are there on ocean-going
vessels, now or in the past four decades? Hint: Not many.

>> It's a very basic concept, this business of the skilled radio operator.
Most if
>> not all of the other radio services have eliminated them, or are trying to
do
>> so. Yet it's precisely what we hams aspire to be!
>>
>> And it's precisely what Len either doesn't understand, or understands and
wants
>> to destroy.
>
> There isn't much I can add to that, Jim. Well said.

Putting aside your own personal hatred of a newsgroup opponent,
you COULD have looked at the past history of the larger world of
radio communications and - if at all possible (but unlikely in here) -
dispassionately agreed with the larger world of radio.

"Skilled radio operator" does NOT mean what it did in the 1920s
and 1930s when morsemanship was needed. This is 80 to 70
years later, remember?

Tsk. The elimination of the morse "skill" was already starting
in the 1940s. Those who were self-righteous about THEIR mighty
morsemanship had blinders on and couldn't see it. All those
"sparks" and their mighty macho morsemanship "skills" were
being displaced/downsized/nonessential on ocean-going vessels
by the 1960s. [today's maritime radio services use voice by VHF
of HF SSB and Data on HF...both of which require NO morsemanship
whatsoever]

If you wish to buy into mythos of morsemanship, fine. But, trying
to convince everyone in the new millennium that this is really the
1920s and 1930s in radio sounds remarkably stupid. "Dumbed-
down" to reality, in fact.

Archaic Radiotelegraphy Society is what you are in. Enjoy.

Careful, Brian...remember that J.P. "serves his country" (by being
a super-special amateur morseman).

If you say nasty to him or Coslo, you will be accused of TRYING
TO DESTROY HAM RADIO!!!! :-)

Heh. All their expertise and "radio operator skills" go in the toilet
when trying to defend the need for morse code testing. They
resort to defamation/denigration/disassembly of those wanting to
eliminate the morse code test, all on the person but not the
subject. QED.

>
>It's so sad.

True enough. Grown men (apparently, at least physically) gettting
all wound up and hissy-fitting about how they are such vital
assets to the nation because they are morsemen. Sometimes
I think of their actions as "asset-retentive." :-)

Tsk. FCC better keep that code test in the regulations or they will "destroy" amateur radio!

That's called the 4th class license, limited to 10w output, for operation
between 21-30 MHz, and below 8 MHz.

Their 1st class license still requires 3 minutes of copy at 12 wpm,
their 2nd class license requires 2 minutes at 9 wpm, and their 3rd
class requires 2 minutes at 5 wpm. See the JARL web site.

No, he refuted, [pointing out the MORE obvious]...The ONLY person in
thbis forum who is "stuck" ANYwhere is Lennie the Liar H. Anderson.

He's the ONLY person (unlicensed, at that) who continues to cite
ANY regulations past 1991.

No one here cites their morse skills as "vital assets", Lennie.

> Tsk. FCC better keep that code test in the regulations or they
will
> "destroy" amateur radio!

Only people like YOU can do that, Lennie, and people like ME will
do thier best to keep scum like you from doing it.

So far, all of the "defamation" comes from YOU, Lennie...YOU
provide all of the "fuel" for that fire!

So, Mr Professional Radio Engineer...tell us all about the
legalities of operating past the expiration date of the license...You
STILL ahve not acknowledged your error or retracted it. What's your
problem?

I couldn't follow who posted what above, but I think whoever said "It allows us to get to know each other better" may need just a little bit of a reality check. This is an "online" venue, and I don't believe that this allows for getting to "know" anyone. OK, maybe slightly...and then only in a few cases.

For instance, the internet, chat rooms, and newsgroups are the greatest playground for playing Devil's Advocate or even downright antagonism, or inciting "a riot" so to speak! I know I can get certain people going in a heart beat of a stroke of a few keys of my keyboard, and they'll look pretty darned idiotic to most who may have been taking them seriously...

In a short, don't ever think that this (the internet) is the medium of humanism, or personalization, or "knowing" others. It just ain't so...

Of course. But all the Auto-Alarm did was get Sparks' attention. Handling the
emergency still required skilled radio operators on ship and shore.

> How many NON-essential crewmen are there on ocean-going
> vessels, now or in the past four decades? Hint: Not many.

That means radio operators were essential for most of the past four decades.

>>> It's a very basic concept, this business of the skilled radio operator.

>>There isn't much I can add to that, Jim. Well said.
>
> Putting aside your own personal hatred of a newsgroup opponent,

Who would that be, Len?

And why would that person be hated?

Here's a clue: Mike doesn't hate you. I don't hate you. We simply disagree with you.

> you COULD have looked at the past history of the larger world of
> radio communications

We just did. Eliminating the need for skilled operators has been a prime goal in radio design since Fessenden's time. Because those operators cost their employers money.

> and - if at all possible (but unlikely in here) -
> dispassionately agreed with the larger world of radio.

What does that mean? Should we eliminate the operators from the ARS?

> "Skilled radio operator" does NOT mean what it did in the 1920s
> and 1930s when morsemanship was needed.
> This is 80 to 70 years later, remember?

Do you mean that Morse Code skill stopped being needed about 1940? History proves that's simply not true, Len.

> Tsk. The elimination of the morse "skill" was already starting
> in the 1940s.

Starting in other radio services, yes. But Morse Code skill was still needed outside of amateur radio for many decades after 1940.

> Those who were self-righteous about THEIR mighty
> morsemanship had blinders on and couldn't see it.

Who were they, Len?

> All those
> "sparks" and their mighty macho morsemanship "skills" were
> being displaced/downsized/nonessential on ocean-going vessels
> by the 1960s.

That's a long time after the 1920s and 1930s, Len. And Morse Code was still in use on HF and MF in maritime services long after that time.

> [today's maritime radio services use voice by VHF
> of HF SSB and Data on HF...both of which require NO morsemanship
> whatsoever]

That's true. Because the shipping companies wanted to be rid of the need for radio operators.

> If you wish to buy into mythos of morsemanship, fine.

Gee thanks, Len.

> But, trying
> to convince everyone in the new millennium that this is really the
> 1920s and 1930s in radio sounds remarkably stupid. "Dumbed-
> down" to reality, in fact.

It's clear you either don't understand what the amateur radio service is all about, Len. Or maybe you just want to destroy it.

You're like the person who wants roads paved through all parks and wilderness areas, so that people with RVs can go camping in places that today are only accessible to backpackers who walk in.

Or the person who thinks highly processed food is better.

I remember a time when all "labor saving devices" and "new technologies" were viewed as "good" and "progress", and supposedly had no downsides. That was a very popular view in the '50s and '60s.

The truth was often exactly the opposite.

For example, after decades of preaching the "scientific advantages" of bottle-feeding babies, the experts reversed themselves and said that the good old fashioned method was better - for both mom and baby.

After decades of "labor saving devices" and fast food, more and more Americans are overweight - even though the charts have been adjusted upwards. Now the experts tell us we need *lots* of aerobic exercise to be healthy.

The nocode license was supposed to cause a revolution in amateur radio technology - but it didn't.

Etc.

> Archaic Radiotelegraphy Society is what you are in. Enjoy.

Wednesday is January 19, Len. Five years!

> LenAnderson@ieee.org
>
> Posted on 16 Jan 05

Gee - you still can't get AOL to work right? I'd think an old-tyme computer expert like you would have it all figured out by now.

>Kim W5TIT

I agree in some ways, Kim, and disagree in others. And it's not a new
phenomenon - it goes back at least to the days of the landline telegraph
operators.

I've met more than a few folks "in person" after first encountering them
online, or on the air. In some cases, the personality you meet on line or
on air is very much the same as the one you meet in person. In others,
the personalities are very different. There's really no 100% sure way to
know ahead of time. The person who is a real %^&# online may be
very nice in person, and vice versa.

But I have found that it's usually the case that the online or onair
personality
isn't *that* much different. There are exceptions, of course, but if a person
acts like a complete @#$% online, there's a very good chance you won't
like their "in person" personality either.

Just IMHO

There are those who would disagree with you, "bb". My mother, my wife, my son, my daughter, my friends, those for whom I've done small favors, the IRS, the DXers for whom I have provided a new country, new band country or new mode country and a number of others who think I'm special. If I'm not special to you, that's okay.

Name them. I can help you start your list:

There's you. There's Len. There's Kim. There's the local guy who forgets to take his lithium and who has issues. You take it from there.

You've provided no evidence that amateur radio is dying.

> The reason it's dying
> isn't because the lack of amateurs in the service. No the reason it's dying
> is content control. Amateur radio is dying because amateur's are under the
> belief that the FCC can control the content of an amateur station.

No one from the FCC has stopped by to tell me that the content of my
amateur radio station is under investigation. Since I've come back to
the U.S., the content of my amateur radio station has been steadily
increasing. Even my XYL has given up on trying to control the content.

> As a
> matter of fact Mr. Hollingsworth of the FCC wanted me to let him know when I
> was going on the air so he QSL me. The QSL he's talking about is in the form

> Act of 1934 is a statue that prohibits the FCC from controlling the content
> of ANY radio stations. It also prohibits the FCC from creating rules and
> regulations which would suppress free speech on the radio.

There are any number of things which can "control" your right to free
speech. There are regulatory things, like the fact that amateur radio
isn't a broadcast service and like the fact the Commission has obscenity
regs. You can't say things which will incite panic. Your civil right
to free speech becomes abridged where it infringes upon the rights of
another. You seemed to have missed those facts.

> The FCC of course
> under other rules and regulations can regulate obscene and indecent
> material. Now there are many out there including the ARRL who believe that
> this rule doesn't apply to amateur radio.

Let me get this straight--You think that the ARRL believes the FCC has
no power to regulate obscene and indecent speech? You surely can't
believe that.

> It of course is not true, this
> statue along with all the other sections of the Communication Act apply in
> one shape or another to amateur radio and the FCC.

Now you're saying that the FCC has oversight for regulating obscenity
and indency propagated BY the FCC? Where does the "statue" come into
play?

(snip)

> For Amateur radio
> to grow, Amateur's are going to have to adapt to new idea's.

Those apostrophes are tricky, huh?

> The problem is
> the ARRL, their members and the FCC which tries to suppress or control the
> content.

So the ARRL and their running dog members are in collusion with the FCC
to control content?

> So I'm broadcasting in an amateur band at night when it's not in
> use. Big fricking deal at lease I using it.

I "using" it too. Truck drivers are sometimes using it too. Did you
realize that broadcasting is prohibited by radio amateurs whether it is
during the day or during the night. Did you realize that the 10m band
during solar maxima can be open all night to various parts of the
world? Did you know that there are propagation modes in which 10m can
open during the night over a distance even during periods of solar
minima?

> I mean so what if broadcasting
> information to the amateur radio community which may be a small value to the
> Amateurs.

If broadcasting by radio amateurs is illegal and of small value, why do
it?

> So what if I'm on there for a hour and half voice my opinion about
> problems and issues in amateur radio.

The "so what" has already been addressed. Are you trying to get your
license yanked?

> At lease I have a opinion and I'm not
> some drone of the ARRL who believes everything the ARRL says.

I'm a life member of the ARRL and I don't believe in everything done by
the ARRL. Then again, I don't broadcast my views on the ham bands. Do
you think the ARRL will do anything differently based upon your illegal
broadcasts?

> That's the
> reason I'm broadcasting to voice my opinion's about issues in amateur radio,
> to let people hear what I'm thinking instead of that idle dribble we call
> ham radio.

That's the spirit, Todd. Give Mr. Hollingsworth all the ammunition he needs for yanking that license. Amateur radio needs more guys like you. No more "idle dribble"!

> I'm a strong believer in free speech and I believe there are
> problems in amateur radio and feel my voice needs to be heard.

So why are you broadcasting on a dead band?

Dave K8MN
"If Todd broadcasts on a dead band, is there a sound?"

Answering my same article twice? You replied to it on the 11th with
a different reply. How odd. You're like one of those homeless folks
mumbling to yourself.

I'm still amused about you claiming to have replied to my January
13th post on the 11th, though. Pretending to be a clairvoyant?

So what about my offer made on the 13th? I'll set up a free
online calculus course just for you and we'll post your homework
and exam scores on this NG so everyone can be impressed with your
work. So far, though, you're getting an F.

You never answered my question from last week: How many ex-wives
do you have?

>
> Oh, my, aren't you the most Self-Righteous One! :-)

Deduction does not make a person self-righteous. and last time I
checked, there was no law against desiring the destruction of the ARS.

> How does the elimination of the morse code test for a U.S. amateur
> radio license, any class, suddenly "Destroy the ARS?"

It does not suddenly destroy the ARS. What it does is probably acquire
another group of people who are similar to the people that were enticed
by the no-code Technician test, who will simply drop out. One needs a
good interest level to learn Morse code. These people are likely to
stick with the program. So as attrition takes out the Olde Tymers, and
the new group simply loses interest and goes on to video games or
whatever, the ARS goes away eventually with a wimper.

Will this happen? I dunno, but there is some plausibility to it.

> Tsk. You should be reporting me to the Secretary of Homeland
> Security or the Attorney General for all this "destruction!"

Wanna engage in civil discussion of the Morse code issue, or do you
want to go off on wild tangents with statements like that?

Same old argument. It is a valid mode, despite its age. So much of what we are using is pretty old technology. SSB is old. FM is old. Even digital modes are hardly new stuff

> Archaic Radiotelegraphy Society is what you are in. Enjoy.

I hope to enjoy it as much as you do your interest in Ham radio.

No reality check needed, Kim. If a person is honest and straightforward, then it comes across. If a person uses various "personas" fro their posting, then that also comes across. If a person needs to disguise themselves, if they feel comfortable tossing brickbats at another, disregarding that there is a human on the other side, and that Usenet is not a sort of insulting text game that they play with their computers, then that also tells a lot about the person.

It is like people claiming that alcohol causes them to do evil and antisocial things. Sorry, but they were already evil and antisocial. The alcohol simply allowed them to shift the blame.

> For instance, the internet, chat rooms, and newsgroups are the greatest

Because the person is like that. I know a lot about people that incite major antagonism in newsgroups, even if they are civil in person.

I don't use it to determine anothers personality, but I can determine true personality from it.

YMMV.

Astute observation, Kim! :-)

The "getting to know each other better" phrase is part of the 'standard
boilerplate' of PC phrasing done to make the writer appear like they
know much more than they do, yet tolerate all others in some
curious fashion of the nobility. [i.e., they are "better" because they
tolerate the "inferiors" :-)]

>For instance, the internet, chat rooms, and newsgroups are the greatest
>playground for playing Devil's Advocate or even downright antagonism, or

Heh heh heh. The beauty of computer-modem communications
have been demonstrated time and time again since ARPANET
evolved to allow messaging, thus creating the original USENET
(acronym for 'university network').

Isolated by time and space, anyone can "let their hair down" and
feel free to vent all their frustrations, spleens, and (sometimes)
waste-management organs on others. They can do so in the
apparent "safety" of the time and space isolation provided by the
computer-modem linkage. None of it is real-time communications.

The examples are ripe/rife in this newsgroup when it comes to
highly-polarized issues. :-)

>In a short, don't ever think that this (the internet) is the medium of
>humanism, or personalization, or "knowing" others. It just ain't so...

Those few of us who had been a part of the "social" Bulletin
Board Systems (as I had beginning 20 years ago) learned very
quickly that the computer personna of some individuals was
quite different from the in-person one.

Computer-modem communications is only slightly less devoid of
the very impersonal radiotelegraphy contact that offers none of
the sensory clues of in-person acquaintenceship...no sight, sound,
or anything else about the other person. With the computer-modem
linkage one gets to see the other's ability to put words together (in
varying degreees of coherency), some slight picturing of education
experience.

What everyone can get is much of the slanted propagandizing of various organizations and groups, parroted phrasing repeated by some others as if they were the blessed sayings of the divine. That is carried over to all forms of beliefs from hobbies to politics. Some of the Believers can get Outraged at any negativisms of the Belief System they have bought (or been psychologically purchased) into and seem to want to Fight To The Death about it. Computer-modem communications allows them to express their Compleat Anger quickly...and so the infamous Flame Wars begin.

The unfortunate side of the coin is that the same technology that allows widespread textual communications also allows storage of all the communiques for a long time, reproduction of content possible (in many cases) by anyone with access. Those that dared to speak their mind "in public" should remember that their words - en toto - are still out there and could be retrieved for some "moot court" proceedings by Outraged "barracks lawyers" in a newsgroup. Such is a many-edged sword waiting to be drawn by anyone...it can cut every which way and results only in more useless energy-expenditure by all concerned.

Anyone with some experience, practice, and observation of the various human beans roaming the planet can do "button-pressing" of others. Those who are pressed may escalate their frustrations and anger into kiloton explosive rages. Those can smoolder for years and erupt into conflagrations of righteous fire (with brimstone) at any moment. Examples abound in this newsgroup as well as many others.

The curiosity (to me) is the steadfast Righteousness of some in their Beliefs, specifically in a hobby activity done (supposedly) for individual enjoyment and general recreation. The Believers MUST triumph their Causes or (apparently) die trying to do so. Sort of a Masada falling/failing again and again and again. :-)

Given enough exposure over years of messaging by Believers (and "heretics"), one gets a glimpse of the Believers' states of mind no longer fettered by in-person facades or necessities of social or employment-hierarchy behavior. Unafraid of direct face-to-face confrontation (and possible physical retribution), they can Vent. Perhaps it is a catharsis to vent. Such is difficult to do in-person without danger of direct harm. Messaging by computer lets us look behind the in-person behavioral mask...but only somewhat. Their reaction to comments in opposition to them tells us more. Adding different catalysts lets us see even more reactions. Given time their personal dossier almost writes itself. :-)

So...I'd say we DO have a means to see inside others' thinking (or lack of it) which is not quite possible in-person. On the other hand, we have no body language responses nor tone of voice nor facial expressions present on in-person encounters.

One thing for sure: The common Territorial Imperative will lead many to Claim Turf for themselves and "buddies." They "own" what goes on and what should go on...even if they have no separate authority to do so. They tenaciously hold fast to their Turf (especially the Beliefs therein) since it is "theirs." :-)

490. Content Control

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-17 21:56:10 UTC
From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <41eb613f$1_2@127.0.0.1>
Source record: 101987

Content Control
I had recently started broadcasting my N9OGL Show on 28.555 MHz at 9.00 pm CST. On my first broadcast I talked about content control in the amateur radio service. Amateur Radio is on the eve of dying; The reason it's dying isn't because the lack of amateurs in the service. No the reason it's dying is content control. Amateur radio is dying because amateur's are under the belief that the FCC can control the content of an amateur station. As a matter of fact Mr. Hollingsworth of the FCC wanted me to let him know when I was going on the air so he QSL me. The QSL he's talking about is in the form of a warning letter, a C&D, NOV, or a NOF. Section 326 of the Communication Act of 1934 is a statue that prohibits the FCC from controlling the content of ANY radio stations. It also prohibits the FCC from creating rules and regulations which would suppress free speech on the radio. The FCC of course under other rules and regulations can regulate obscene and indecent material. Now there are many out there including the ARRL who believe that this rule doesn't apply to amateur radio. It of course is not true, this statue along with all the other sections of the Communication Act apply in one shape or another to amateur radio and the FCC. Let me enlighten you on a little history that starts in the 1980's. In the 1980's and 1990's packet radio was a big thing. Let me tell you when I first got into amateur radio I thought packet was neat. I mean I would stay up all night and play on packet till the sun came up and then head off to work. This of course was in 1991-1992 when I had first gotten my license. But, there was one thing I noticed; I had gotten into the local BBS system to read the latest messages and then I went through the network and got into the BBS over in Australia and guess what? It was the same crap. Many people believe think packet radio died from the speed in reality packet died because of the content. The same will happen eventually to amateur radio. I mean who would spend the time and money on getting a ham license when every thing a amateur radio operator can do a person can do on the internet. I mean don't get me wrong talking all over the world on the radio is neat and all; but you can also do that on the internet. I mean would a average person spend the time and money to get a ham license to talk on the radio to give their name, location, power output, antenna height, and weather report to some smock over seas or get on the internet where content control isn't a problem. I guess what I'm getting at is for amateur radio to really grow amateurs must get rid of this idea of content control. Because what's really going to happen is their going to loose to technologies which don't have that restriction. For Amateur radio to grow, Amateur's are going to have to adapt to new idea's. The problem is the ARRL, their members and the FCC which tries to suppress or control the content. So I'm broadcasting in an amateur band at night when it's not in use. Big fricking deal at lease I using it. I mean so what if broadcasting information to the amateur radio community which may be a small value to the Amateurs. So what if I'm on there for a hour and half voice my opinion about

problems and issues in amateur radio. At lease I have a opinion and I'm not some drone of the ARRL who believes everything the ARRL says. That's the reason I'm broadcasting to voice my opinion's about issues in amateur radio, to let people hear what I'm thinking instead of that idle dribble we call ham radio. I'm a strong believer in free speech and I believe there are problems in amateur radio and feel my voice needs to be heard.

A lot of adjectives come to mind over this bit of bileish tripe,
but "Scrooge" fits it best.

But coming from a guy who couldn't laid in a cat house if he had a
$100 taped to his forehead, why should I have been surprised to see
something as deceitful as " 'standard boilerplate' of PC phrasing..."

It was nothing of the sort.

> >In a short, don't ever think that this (the internet) is the medium

That's only because you populate the wrong forums and happen to BE
one of those perersons who has a NEED to be something other than what
you are.

If you wanted to state that I "tolerate" you, I guess you could say
that without me getting riled. But to try to say I am tolerating
"inferiors", well that is just not the case. There isn't anyone in here
that I consider inferior.

Yup. It also shows a lot about the person that they are. DO people
think that comparing others with the Nazis or to call each other an
endless barrage of names is not showing a personality trait?

It is.

But that does not mean that the computer persona is not a part of the
person's whole persona.

It is. If the personas are radically different, it simply shows that
there are some issues that should be dealt with.

Good to see you agree. That doesn't stop an astute person from making
deductions based on what other people write.

Aside from hams within about 50 miles of you, who's
gonna be able to hear it? Still say the Internet is
a better tool for this....

The rules on "content" just say "no pecuniary interest",
no "broadcast of material other than stuff hams and
noone else would be interested in" but 2 way or multi
ham nets can talk about anything they want except offensive
or indecent material or anything that would be pecuniary.
Also no false distress calls and such either.

Nobody seems to care about amateur radio including the hams themselves.If you question what I say,just hangout on 75 meters and just listen to the foul mouth bigots and the racial slurs that you hear.It isn't any different than down where the mud ducks roam(11 meters).I will say this the only amateurs I hear who are courteous,practice good operating procedure and talk radio are on the AM net. N9OGL needs to change his operating frequency to 27.555.Somebody might be listening there. 73's

That's one way to look at it. Here's another: What does it say about a
person whose online personality appears to be different from their
"in person" one? Which is an act, and which is real? And why bother
with the deception?

>to get it without much study, Len.

Tsk. It hasn't been my intention to "get a damn license." :-)

I can't see such a personal identification as applying to my
advocacy to remove the morse code test from any test.
The subject of morse code testing should stand by itself,
without all the hoopla over test-passing.

The reality of the radio world is that morse code mode is
either dead or dying or was never born in every other radio
service but amateur radio hobby activity. Even then, morse
code is used only by a minority of those licensed as radio
amateurs.

The attempt to "justify" (realistic word is rationalize) the
morse code test is specious. It serves no real purpose to
anyone desiring an amateur radio license...other than to act
as an "initiation rite" that is kept only because so many others
in the past were required to take that test. The federal
government is NOT obliged to maintain fraternal order
initiation rites. That is something for membership groups,
not something for anything codified into law as regulations.

The argument maintenance of the long-timers boils down to
(via brainwashing by even longer-timers) them having to take
the morse test, therefore all others have to take it also. That
would be valid only if the ARS were an Amateur Radiotelegraphy
Service. It is not.

The morse code test in test element 1 is considered by the FCC
as inapplicable to their need to determine the licensing
qualification of amateur radio license applicants. It remains
(apparently) under pressure by the long-timers and the ARRL
(not the oldest radio club) keeping it in regulations...because
they all feel that it is "necessary" (they had to take a morse
test, therefore all others have to).

Some morse code devotees consider the test necessary to
"preserve and protect" manual telegraphy skills. The FCC is
not chartered as either a historic preservation agency nor as an

academic one. Its lawful activity is simply to regulate ALL U.S. civil radio.

Unless there has been some covert activity to circumvent the Constitution of the United States, all U.S. citizens have the right to "petition their government with their grievances." In smaller words that means they can comment to any agency of the government about any laws or regulations made by that government. "Membership" in any particular agency's activity is NOT required.

Apparently, some in here seem to think that ONLY licensed radio amateurs "should" comment on amateur regulations or that any who so comment are "wishing to get a license." I do not so "wish." That is NOT a "requirement" nor is there any "motivation" to do so. The elimination of the morse code test is simply long overdue and should be done for the benefit of ALL citizens, not some aging fraternity boys wanting to keep an initiation rite forced upon others for no reason but their own personal desires. Those individuals are NOT a regulatory agency at all despite their implications.

The elimination OR the retention of morse code testing can be discussed on its own merits, not the "accomplishments" of a few who cannot justify their side of the discussion.

You would do better to copy the methods of others and attempt defamation of the person of those wishing to eliminate the code test. That IS the way of those PCTA extras found in here.

Herr Kommandant? Godwin invoked. You lose.
You certainly haven't described me. As one who enjoys playing music,
particularly blues and jazz, I'm quite at home with flatted notes. I
can also tell the subtle differences in a variety of prigs.

> >"""Tell us about amateur radio's role in an emergency."""

Many coded Techs are quite active on 6m. Most no code Techs are not.
In fact, most of the no code Techs I encounter are on 2m or 70cm
repeaters only. Once almost never hears them on simplex frequencies.
They stick to FM and aren't heard using SSB or CW on 2m or 70cm. Around
here, most no code Techs are not active radio club members. Most do not
partcipate in ARES groups. Most are not members of the ARRL. To sum it
up, it seems that most no code Techs are about 2m FM repeater use.

Don't be surprised, Len. I've seen grown men obsess over things in
which they are not even involved, spending countless hours of their
lives bellowing over issues involving areas in which they aren't even
participants; things which don't effect them in the least. Go figure!

Careful Jeff! Len has two homes, no mortgages and a comfortable income.
You don't have to be homeless to mumble to yourself.

The Anderson home comm center has glitches from time to time. It is, of
course, all the fault of AOL.

It's amazing how well a guy can do riding on other's coattails.

And, of course, those overly proud, patriotically pontificating
"Mighty Morsemen" who have held him back from really being able to be
all he could be in "radio".

"Source: Jargon File (4.3.1, 29 Jun 2001)

Usenet /yoos'net/ or /yooz'net/ n. [from `Users' Network'; the original spelling was USENET, but the mixed-case form is now widely preferred] A distributed bboard (bulletin board) system supported mainly by Unix machines. Originally implemented in 1979-1980 by Steve Bellovin, Jim Ellis, Tom Truscott, and Steve Daniel at Duke University, it has swiftly grown to become international in scope and is now probably the largest decentralized information utility in existence. As of early 1996, it hosts over 10,000 newsgroups and an average of over 500 megabytes (the equivalent of several thousand paper pages) of new technical articles, news, discussion, chatter, and flamage every day (and that leaves out the graphics...)."

Don't you get anything right, Len?

> What everyone can get is much of the slanted propagandizing of

You Get Outraged Regarding Morse Testing. You Snipe At The ARRL. You Snipe At Radio Amateurs. You Want To Fight About It. You Express Your Anger. You Partipate In Flame Wars (But Not In Amateur Radio).

How is that any more curious than one who is not involved in a hobby who maintains a Righteousness In His Beliefs over a hobby activity in which he is not involved?

> I can't see such a personal identification as applying to my
> advocacy to remove the morse code test from any test.
> The subject of morse code testing should stand by itself,
> without all the hoopla over test-passing.

That's odd. The subject of testing should stand without hoopla over
passing the test? Very, very odd.

> The reality of the radio world is that morse code mode is
> either dead or dying or was never born in every other radio
> service but amateur radio hobby activity.

The reality is that amateur radio is the very activity in which the
morse code test remains. Morse code use is very much alive in amateur
radio.

> Even then, morse
> code is used only by a minority of those licensed as radio
> amateurs.

Many thousands use morse code daily within amateur radio.

> The attempt to "justify" (realistic word is rationalize) the
> morse code test is specious.

The reasons for attempting to remove morse testing are specious.

> It serves no real purpose to
> anyone desiring an amateur radio license...other than to act
> as an "initiation rite" that is kept only because so many others
> in the past were required to take that test.

That claim is specious.

> The federal
> government is NOT obliged to maintain fraternal order
> initiation rites. That is something for membership groups,
> not something for anything codified into law as regulations.

That claim is specious.

> The argument maintenance of the long-timers boils down to
> (via brainwashing by even longer-timers) them having to take
> the morse test, therefore all others have to take it also. That
> would be valid only if the ARS were an Amateur Radiotelegraphy
> Service. It is not.

Your statment is specious.

> The morse code test in test element 1 is considered by the FCC
> as inapplicable to their need to determine the licensing
> qualification of amateur radio license applicants. It remains
> (apparently) under pressure by the long-timers and the ARRL
> (not the oldest radio club) keeping it in regulations...because
> they all feel that it is "necessary" (they had to take a morse
> test, therefore all others have to).

What a specious statement!

> Some morse code devotees consider the test necessary to
> "preserve and protect" manual telegraphy skills. The FCC is
> not chartered as either a historic preservation agency nor as an
> academic one. Its lawful activity is simply to regulate ALL U.S.
> civil radio.

Another specious statement.

> Unless there has been some covert activity to circumvent the
> Constitution of the United States, all U.S. citizens have the right
> to "petition their government with their grievances." In smaller
> words that means they can comment to any agency of the
> government about any laws or regulations made by that government.
> "Membership" in any particular agency's activity is NOT required.

You continue to make specious claims. You've petitioned your government
by using terms like: "Judging from the suppressed outrage of
long-tenured amateurs on the so-called free upgrade, one is tempted to
add 'where they belong!' but that is unkind and shouldn't be said.
Nonetheless, it is quite evident that class distinction is alive and
firmly entrenched in United States Amateur Radio." and "That satisfies
the hide-bound long-tenured's need to keep Technicians in the
no-code-test ghetto."
Your government is free to take no action on your statements. No one
here is required to give credence to your statements or even to read
your statments. No one is obligated to refrain from making light of
your claims, from ridiculing your claims or from taking heated issue
with your claims.

> Apparently, some in here seem to think that ONLY licensed radio
> amateurs "should" comment on amateur regulations or that any
> who so comment are "wishing to get a license." I do not so "wish."

I don't mind at all that you've commented to the FCC. I don't have to accept your crap here though. I'm free to reject your ideas. I do. I'm free to reject your manner. I do. As to whether you desire an amateur radio license, such as an "Extra right out of the box", that depends upon which phase of the moon or which year we're in. You've said you do. You've said you don't. It doesn't matter. You've commented to your government. Now provide us a document which guarantees your right to have us to sit idly by while you expound here.

> That is NOT a "requirement" nor is there any "motivation" to do so.

Requirement? No. Motivation? You have not been motivated despite your claimed, decades-long interest in amateur radio.

> The elimination of the morse code test is simply long overdue and
> should be done for the benefit of ALL citizens, not some aging
> fraternity boys wanting to keep an initiation rite forced upon others
> for no reason but their own personal desires. Those individuals
> are NOT a regulatory agency at all despite their implications.

Sorry. Specious.

> The elimination OR the retention of morse code testing can be
> discussed on its own merits, not the "accomplishments" of a few
> who cannot justify their side of the discussion.

Can we discuss your lack of accomplishments in amateur radio? In the use of Morse code? Shall we discuss your use of terms like "Der Kommandant" or "feldwebel"? Do you use those terms to justify your side of the "discussion"?

> You would do better to copy the methods of others and attempt
> defamation of the person of those wishing to eliminate the code test.
> That IS the way of those PCTA extras found in here.

But not the way of those using the "Der Kommandant", "feldwebel", "Avenging Angle", "puts on his habit from time to time and tries to strike
knuckles with her ruler", "Church of St. Hiram" terms? Should those ways be copied?

You're a riot, Len.

So, we're not discussing the content of an amateur radio station but of
the content of individuals? What do you, K1MAN and the Liberty Net
contain? Seriously, Todd, I think that if the FCC is going after you,
K1MAN and the Liberty Net, it is doing something right.

It seems to be a misstatement shrouded in a misprint.

> There are many in the ARRL
> which believes that Free Speech doesn't apply to amateur radio.

Are you speaking of Directors? staffers? members? Who in the ARRL who
don't believe such?

> Nor, the
> statue that forbids the FCC from controlling content of ANY radio and

> forbids the FCC from making any statue or regulation which supress speech
> apply to amateur radio.

Todd, the word you are searching for is "statute", not "statue". I
don't believe that there is a statute forbidding the FCC to control
obscenity, indecency any other misuse of your amateur radio station.

> > > It of course is not true, this
> > > statue along with all the other sections of the Communication Act apply

I'll assume that you mean the content of transmissions from an amateur
radio station. Those in the ARRL who believe that the FCC can control
the content of transmissions are correct.

> > > So I'm broadcasting in an amateur band at night when it's not in

If they're "broadcasts", it doesn't matter.

> 10 meters with the solor maxima at it peak around here begins
> closing down around 9 to 10 PM.

Sometimes it does. Sometimes it doesn't. Sometimes the band is open
round the clock. That really doesn't matter. You can't broadcast any
time.

> > > I mean so what if broadcasting
> > > information to the amateur radio community which may be a small value to

Not much of the public is listening to amateur radio. Almost no one is
listening to 10m when the band is closed.

> So although Information bulletins
> are directed towards the amateur radio community the public does listen.

And?

> There is a gray line there.

There is?

> > > At lease I have a opinion and I'm not

...because I'm not permitted to broadcast. I value my amateur license.

> are you for content control??

Yes, most assuredly.

> There is
> one thing many amateur have to remember...Amateur radio is a hobby.

I think "many amateur" remember that.

> Someone
> who takes their hobby to serious has no real life.

...and someone who doesn't take his hobby seriously has no real hobby.
Many things have been done in a half-assed manner because the doer's
attitude is, "it's only a hobby".

> W1AW is "broadcasting" so if I should stop so should they.

So, you equate the value of what you are doing to what W1AW is doing?

> > > That's the
> > > reason I'm broadcasting to voice my opinion's about issues in amateur

> > No more "idle dribble"!
>
> And with you and the ARRL by his side Free Speech will be supressed.

Suppressed? I don't think so. Controlled? Yes. What is it that you
don't feel you can do on the air as a ham, Todd? Is it that you can't
use potty language, or that you can't make money or that you can't play
music?

> > > I'm a strong believer in free speech and I believe there are

Ham radio in about 10 to 15 years will be dead because technology and the
free flow of content will surpass amateur radio. No matter what you might
think that's a reality. Amateurs seem to believe that amateur radio should
be the idle dribble we call amateur radio. For amateur radio to grow
amateurs are going to have to change. Amateur radio has to look at the
future and not the short term future.

Not yet anyway.....but the FCC has gone after or discourage people for their
content in the past. ME, K1MAN, the Liberty Net just to name a few.

> believe that.

That was a misprint which I'm planning to fix. There are many in the ARRL
which believes that Free Speech doesn't apply to amateur radio. Nor, the
statue that forbids the FCC from controlling content of ANY radio and
forbids the FCC from making any statue or regulation which supress speech
apply to amateur radio.
.
> > It of course is not true, this
> > statue along with all the other sections of the Communication Act apply
in

>
> Now you're saying that the FCC has oversight for regulating obscenity
> and indency propagated BY the FCC? Where does the "statue" come into
> play?

No, the point I was trying to make which like I said will be fixed on the
website. The point I was making is that there are some in the ARRL that
believe that certain statues don't apply to amateur radio but they in
reality they do.

> (snip)
>

Again the there are some in the ARRL that believes that the FCC can control
the content of amateur radio stations.

> > So I'm broadcasting in an amateur band at night when it's not in

First off my "broadcast" are programs directed towards the amateurs radio
community. 10 meters with the solor maxima at it peak around here begins
closing down around 9 to 10 PM.
> > I mean so what if broadcasting
> > information to the amateur radio community which may be a small value to
the
> > Amateurs.

Information bulletin are not illegal. Any information no matter how
important to one person may be of small or little vaule to another person.

> > So what if I'm on there for a hour and half voice my opinion about
> > problems and issues in amateur radio.
>
> The "so what" has already been addressed. Are you trying to get your
> license yanked?
>
Again information bulletin are not illegal. The problem is the idea that the
public doesn't listen to amateur radio. So although Information bulletins
are directed towards the amateur radio community the public does listen.
There is a gray line there.

> > At lease I have a opinion and I'm not
> > some drone of the ARRL who believes everything the ARRL says.

> broadcasts?

Why won't you broadcast your view?? are you for content control?? There is one thing many amateur have to remember...Amateur radio is a hobby. Someone who takes their hobby to serious has no real life.W1AW is "broadcasting" so if I should stop so should they.

> > That's the
> > reason I'm broadcasting to voice my opinion's about issues in amateur radio,

- - - - N9OGL COMMENTS CUT/PASTED FROM HIS BLOG FOLLOW - - - -

Written by Todd Daugherty N9OGL

On February 8, 2002 the United States Court of Appeal ruled the Radio
Broadcast Preservation Act (RBPA-2000) was unconstitutional (Greg Ruggiero
vs. FCC 2002) then to a shock the court of appeals overturned it's own
decision ruling that the RBPA of 2000 was constitutional. (Greg Ruggiero Vs
FCC 2003). I'm writing this "paper" because I feel that there was something
that should have been said but wasn't and since I tell it as it is I will
say it. There is also a problem with the recent ruling (Greg Ruggiero Vs FCC
2003) which I've also added to this paper.

The first comes from that Bitch Judge Karen LeCraft Henderson who stated in
the 2002 ruling

First, you must not have to be very intelligent to be a fucking judge of the
court of appeal.it seems if they can let this dumb ass bitch and her little
bitch whore buddies on the bench then anyone can..

Did I fucking miss something here??? Listen bitch the FCC NEVER had any LPFM
rules prior to the passing of the LPFM rules in 1999. You and your fucking
whores in the Court of Appeal are the stupidest mother fuckers on the
planet. For years the FCC went around telling you that all a person had to
do was fill out an application and ask for a waiver..well guest what you

fucking sluts THE FCC FUCKING LIED TO YOU!!! The FCC has NEVER considered application and waiver for LPFM ..and you stupid fucks believed them all these years. That's why a lot of people went on the air..because the FCC wouldn't consider applications and waivers for a low power service. Bitch my group applied six times for a license with waiver and that is why we went pirate.

And now.2003 for the king bitch whore Ginsburg.

The commission proposed?? That's a bunch of shit the FCC didn't propose it someone else did in a Petition for Rulemaking.that's a bunch of fucking shit quit smoking your fucking crack.

The Congress responded not out of concern of what the FCC was doing but by the huge load of cash they were getting from the National Association of Broadcasters (NAB). My dickhead congressman John Shitless (Shinkus)

Got paid $14,000 from the NAB for the RBPA but that's ok..I'm going make sure that son of bitch mother fucker isn't elected again!

Then perhaps " former pirates" like WBCQ shouldn't have a license..and tell me you stupid fuck...when did the disregard to the legal process become legal..You stupid fuck head has basically given the FCC the go ahead to disregard not only the judiciary process but the Administrative Procedure Act (APA). Your stupid thinking is regardless to what a federal judge or an administrative judge says a pirate is a pirate regardless to what legal challenge they may bring and regardless of any fact or findings. Your fucking retarded thinking is that a pirate is guilty regardless of any evidence.well fuck, why do we do that with murders..Hell, Bob Butt much killed Joe Dickless but hey there's evidence he not guilty.fuck he's guilty regardless of any evidence. That the same fucking shit you did with pirates then it should apply to any other crime. Perhaps Mr. Ginsburg you should stop kissing congress and the federal government ass.

And now a few words from my favorite dickhead.Judge Randolph.

This has to be one of the stupidest mother fucker on the planet...No chilling effect??? How about the ability to allow an agency to disregard any legal proceeding as prescribed under the APA not to mention your next stupid fucks comment..

Despite what
you and your little bitch whore buddies in the NAB may think as the secretary of commerce Herbert Hoover once stated The First Amendment and radio fall hand in hand..and it stupid fucks like you in the court of appeal that are destroying not only free speech but destroying the legal process.

As for the U.S. Supreme Court..there just as fuck stupid as these fucking idiots..you know at one time I had great respect for the U.S. Supreme Court. But now..by allowing this stupid fucks to destroy the legal process and basically misread Red Lion Broadcasting and bend it to their own fucking will I think the U.S. Supreme Court has got to fuck hell and my respect is now gone. Because they along with those stupid fuck in the U.S. Court of

Appeal has failed to grasp reality of what is really go on in the world.

Well so could amateur radio. Let's get rid of amateur radio all together and all go to the internet. All the stuff the amateur do can all be done on the internet. I sure all the amateur bands could be used for another service. Think about it if all of the amateurs move to the internet they wouldn't have to worry about BPL.

> The rules on "content" just say "no pecuniary interest",

>
Pecuniary Interest means some kind of business or financial gain.This however is all true because the FCC has changed the rules to stuff that used to be consider "pecuniary intrest" and now is legal for amateurs. If amateurs aren't allowed to have pecuniary interest then W1AW shouldn't be allowed on the air because of it's pecuniary interest.

Then again, that's the first thing to come to your mind when someone
writes of helium balloons or of amateur radio in an emergency or of the
ARRL, or of military communications. :-) :-)

I can see Lennie at the Shrink's office now.

"Mr Anderson, I will give you a word and you tell me the first
word that comes to mind...Ready?.....'Breast' "

"Morse Code".

"Army"

"Morse Code"

"Wife"

"Morse Code"

"Hamburger"

"Morse Code"

"Career"

"Morse Code"

"Morse Code"

"Suicide"

"I think we know what your problem is, Mr. Anderson."

And there you have it. Somehow or another, every thread seems to get
turned into Morse code.

Morse code is like my socks. I like to wear them, but I don't always
want to talk about my socks.

Oddly enough, there are some who only want to talk about socks.

Or Morse code.

I don't know WHY you wouldn't expect it, Mike!

Lennie's whole schtick is about being able to be a victim.

His whole career has been about being second place. Even when
he's been at the ehad of his class, he's attacked any and all arond him
as being "against" him. That's why he's never been at the head of the
class for long. That's why his only "professional" writings were in an
Amateur Radio journal.

> > Excuse me, Leonard, but it certainly looks as if that is precisely
what
> > you have done. My words to "bb" were about a subject. You have
drifted
> > off on a sea of German phrases.

And pseudo-German at that. It's Lennie's way of inferring that we
are Nazis, Brownshirts, etc etc etc. He's said as much before.

> If I did't know better, I would say that Len doesn't like you very
> much......

Lennie doesn't like anyone, Mike, and that INCLUDES Lennie. He
has no dignity or self-respect. A man that did wouldn't allow himself
to be so readily made a fool of over and over and over again. But he
DOES, and that alone speaks volumes of the character (or should I say
LACK of character) of the person.

Now, now, Dave. Todd is self-proclaimed educated and an advisor to
legislators at the seat of government on the laws and future of
"micro- broadcasting". Surely he knows how to dribble the
information out....

>> The reason it's dying isn't because the lack of amateurs in the service.

Careful, Brian. Poop Dave the 1st gets spells of voiding hisself in
here periodically. Today (18th) he really voided. Whatever he
was full of seems to have spilled all over in here...

Remember also that we ordinary mundanes must NOT, under any
circumstances, say anything bad about PCTA extras or even dare
to oppose their viewpoints. They RULE in here.

This newsgroup works on democratic principles. We can say
anything we like...as long as we say it according to what the PCTA
extras approve. After all, "they serve their country in OTHER ways."

Which "Jim?"

Don't mighty macho morsemen "serve their country in OTHER ways?"

:-)

>
>> If you say nasty to him or Coslo, you will be accused of TRYING
>> TO DESTROY HAM RADIO!!!! :-)
>
>Say nasty? Why would you do that?

Say what?

Tsk. Mighty macho morsemen seem to think that removal of the
morse code test is "destroying ham radio!"

Tsk, tsk. I'll bet you do. You seem to want to CONTROL all to your way of thinking...ONLY your way...which is also what you've been brainwashed into thinking by some kind of organization headquartered in Newington.

You sure couldn't have learned your dictatorial ways in the State Department. State isn't quite that bad, despite what a lot of U.S. citizens (and a bunch of foreigners) think of it.

>"They" do? What are you doing, Leonard?

I'm TRYING to argue against the morse code test. You are trying to squelch such arguments by misdirection into defamation of any who are against the morse code test.

I'd say that is against democratic principles. You wouldn't. You control amateur radio because you are a participant. You claim "turf" and want to exclude non-participants...even just TALK about elimination of the morse code test.

Anyplace else that would be called "dictatorship." :-)

Yup, the World According To Dave is all about Beliefs in the Church of St. Hiram, Pope Dave the 1st as emperor. Obey Him! :-)

Tsk. Don't YOU "serve your country in other ways?"

What are those "other" ways?

Are you preserving and protecting morse code for posterity like a
national treasure?

Or are you just preserving and protecting your posterior by running
around saying "I never said that and neither did anyone else?" :-)

>>
>>> If you say nasty to him or Coslo, you will be accused of TRYING

HYPOCRISY ALERT!

Tsk. Tsk. Tsk. PCTA extra Double Standard.

OK, let us work with your paranoia. Anyone against the morse code
test for a license is "destroying amateur radio!"

So...U.S. amateur radio is all about morse code and taking the morse
code test?

That seems very odd. In fact, it seems irrational...to normal folks.

But, to the irrational, plus those with such thin skins to be sorely
wounded by the slightest negativism against morse code, being
against the morse code test is "destroying amateur radio!"

I'm sure you feel obliged to sync your phants with those irrationalists.

>> "They" do? What are you doing, Leonard?

Trying to argue for the elimination of the morse code test. :-)

Tsk. There's so much background noise about personalities in
here it's almost impossible to get back to the subject.

Now, you go back to "serving your country in those OTHER ways."

Your country thanks you.

Did dit.

You betcha. :-)

According to Poop Dave the 1st, I have "no motivation." Tsk.

Well, my wife and I have only one automobile. That is sufficient
motivation for most. Not to Poop Dave the 1st...nor to J.P. (who
serves his country in 'other' ways).

I won't pay tithe to the Church of St. Hiram nor kiss the ring of Poop
Dave. [no motivation to Obey His Magnificence you see]

>You don't have to be homeless to mumble to yourself.

Poop Dave the 1st is really voiding hisself in here today (18th). :-)

>The Anderson home comm center has glitches from time to time.

Only when the PCTA extras try to get in it and stamp out any
talk of eliminating the morse code test. Poor things are still
stuck worshiping the graven images of radiotelegraphy.

>It is, of course, all the fault of AOL.

It is? I don't think so. I think it is really due to the dictatorial
demands of the PCTA extras who rule out any hope of mentioning
anything They don't like.

Foolish me, believing in democratic principles. "CW" rules and always will. All must "motivate" themselves to be good lil morsemen in order to "prove themselves to the ham community."

Poop Dave the 1st has so ordered...and voided...again.

>
> Good point. No one said that though.

It was all written, not said. :-)

Let's see...the 911 emergency call system was implemented
on the telephone infrastructure. It wasn't implemented through
amateur radio. Really.

Yes, some amateur repeater operators have added the ability to
access the TELEPHONE SYSTEM 911 calling. At least I am
told this. :-)

So, by the miraculous wish-fulfillment properties of the self-
righteous, you now want to infer/imply/never-say-outright (or
whatever you do or claim) that amateur radio is responsible for
the creation and continuance of the 911 emergency calling
system?

>> Twilight Zone. Lost in Space. Outer Limits.
>>
>> Jeff Herman said that hams can do communications with zero power

According to the rec.radio.amateur.policy newsgroup postings.

Tsk. Is AOL giving you trouble also?

> Hams used VHF HF, and an internet link during the debris search. I
>don't know if they used UHF or not

You were THERE? Along the debris footprint? Did you find anything?

Or didn't you just repeat the tale told to you? Which is it?

NASA doesn't say that hams were the ONLY ones looking for debris.

Well, I should cut you some slack. With all that "serving your
country in OTHER ways," it must make you tired and grouchy.
Get some rest. You will feel better.

>> This is getting to be like Laugh-In but without the humor...
>
> It is there, you just have to look for it!

Yes, it is there. But the "humor" isn't funny.

Problem is, "Laugh-In" is a defunct TV show.

Lots of the myths of morse have been defunct longer...but they still
live on like ghouls or zombies. You have ghoul friends?

Continue to "serve your country in those OTHER ways," good soldier.

To quote Ginsburg, J. from the 2003 ruling: "This is nonsense on
stilts".

A wonderful turn of phrase.

Dit-dit-dit-dah-di-dah.

Why should he start today, Dave?

It's yet another claim of his "seniority" in another
technically-related "career" that he's obviously NOT very competent at.

We're STILL awaiting his retraction of his assertions about the
legality of operating a radio station beyond the expiration date of the
license.

Odd he'd make that claim since EVERY federal examination, Amateur
or Commercial, has questions specifically addressing the subject of
license terms and limits.

> > What everyone can get is much of the slanted propagandizing of

We're also still awating his delivery of evidence to support his
claim of dishonesty of the ARRL in general and the Board members in
particular.

I am also curios to see his supporting evidence of HIS claim of
radio services specifically enacted for "purely recreational" uses.
That's not been forthcoming either.

He also got off on a tangent trying to humiliate me over Civil Air
Patrol and started in on CAP's AT-6 and other alleged warbird fleet
that I was an "ace aviator" of... (yet another field of knowledge for
which Lennie has no experience...) I am still waiting for his
supporting evidence on THOSE claims... CAP's only "warbird" remenants
are an O-1 Birddog on a pedestel outside it's offices in Alabama.

which
> he is not involved?

Even more so where there is not a single line of federal
regulation within any of the FCC's rules and regulations that addresses
"hobby activity" or "general recreation" within Part 97. That it may
be used for such is obvious, however there are people who view
Emergency Medical Services, criminal forensics and domestic abuse
intervention advocacy as "hobbies" too. His "point" about "hobby" is
irrelevent..in spades...

"Morse code is like your socks?!?"

That is indeed strange!

Shall we "sock it to you?" [defunct TV show phrase]

Do you use a straight sock or do you have bugs in your shoes?

> Oddly enough, there are some who only want to talk about socks.

You have to quit hanging around those foot fetishists.

Are you demanding all who take a U.S. amateur radio license test
wear socks?

Why?

Maybe you want restaurants to change their "no shoes, no service"
signs to include "no morse code ability, no service?"

How long have you had this obsession about socks?

Do you like to use the phrase "that socks?"

You are most strange.

BWAHAHAHAHAHAHAHAHAHAHAHAHHEHEHEHEHEHEH.

Excuse me, yer lordship, lost control there... Bwhaha...oops.

>After all, how does it affect *him* if some ham reads his
>words, thinks they're true, and operates illegally?

HAMS rule amateur radio.

FCC doesn't require commissioners or staff to hold amateur radio
licenses in order to regulate U.S. amateur radio.

Ergo, J.P. logic has it that NO HAM SHOULD OBEY THE FCC
IF THEY DON'T HAVE HAM LICENSES!

Poop Dave the 1st would claim the FCC isn't "motivated."

The Coslonaut (heading for outer space) only wants to talk
about socks. Is he really a sock-tucker?

The Avenging Angle keeps nurturing his murderous hatred.

The University Lecturer wants to talk about highways.

This newsgroup be gettin' FUN-EEEE! :-)

Too bad the PCTA extras aren't talking about amateur radio
or the morse code test issue.

Yes, it was. And you continue to quote out-of-context.

> Let's see...the 911 emergency call system was implemented
> on the telephone infrastructure. It wasn't implemented through
> amateur radio. Really.

The IN-CONTEXT parts that you continue to snip in order to make it
work for you is that PRIOR to the proliferation of the cellphone,
Amateur Radio was one of the principal methods of interface with 9-1-1
for the delivery of emergency calls.

It remains an important part of that network. Almost every agency
of Federal, state and local government has some provision for the
implementation of Amateur-supported alternatives to both the cellphone
and landline communications nets.

This is not "wish fulfillment" or fantasy. It is documented fact.

> Yes, some amateur repeater operators have added the ability to
> access the TELEPHONE SYSTEM 911 calling. At least I am
> told this.

And BEING told this is the only way you'd know.

Embarrassing, wot, that some elementary and middle school kids
have more practical knowledge on some aspects of "emergency comms" than
an octogenarian "radio professional", eh...???

> So, by the miraculous wish-fulfillment properties of the self-
> righteous, you now want to infer/imply/never-say-outright (or

No, they weren't.

However the radio spectrum from 136Mhz to 156Mhz was the prefered
method of ground team communications, and much of that between 144Mhz
to 148Mhz.

> Well, I should cut you some slack. With all that "serving your
> country in OTHER ways," it must make you tired and grouchy.
> Get some rest. You will feel better.

Professional mental health counselling would help YOU,
Lennie...and NOT that K-Tel, correspondence course stuff Mommy does.

Oh...I forgot...No kids..Sorry..That was ANOTHER of yet a few dozen disciplines for which you have no practical experience.

> >> This is getting to be like Laugh-In but without the humor...
> >
> > It is there, you just have to look for it!
>
> Yes, it is there. But the "humor" isn't funny.

We ahve yet to see any from you, Lennie...except for some bizzare, self-titillating stuff you seem to enjoy for some resaon.

> Problem is, "Laugh-In" is a defunct TV show.

You don't seem to have a grip on that though, Lennie.

For the longest time your AOL "profile" imagined you as the scruffy character played by Arte Johnson who got clobbered by Ruth Buzzy's "bag lady" character when he made inappropriate suggestions to her.

Seems to me that you've made a career of making inappropriate suggestions to people on a whole range of subjects and you seem to ENJOY getting clobbered for your stupidity.

> Lots of the myths of morse have been defunct longer...but they
still
> live on like ghouls or zombies. You have ghoul friends?

You do. Roll over an give her a big wet one, Lennie. And tell her it's almost noon...take off the blinders.

> Continue to "serve your country in those OTHER ways," good
soldier.

How do YOU "continue to serve your country", Lennie? Yet another epoch ended in 1956?

Putz.

Start a thread about the Morse code issue.

Personally, I don't have anywhere near as high an interest in Morse code
as you do.

> >words, thinks they're true, and operates illegally?
>
> HAMS rule amateur radio.
>
> FCC doesn't require commissioners or staff to hold amateur radio
> licenses in order to regulate U.S. amateur radio.

Which has absolutely NO bearing on YOUR assertion, and failure to
retract same, about the legality of operating after the end of the term
of license.

You have previously claimed to be a "radio professional".

Your posts herein present evidence to the contrary.

> Ergo, J.P. logic has it that NO HAM SHOULD OBEY THE FCC
> IF THEY DON'T HAVE HAM LICENSES!

A logical person would realize that a perosn is NOT a Ham if they
don't have a license.

Surprising that you didn't catch this, Lennie, since YOU are IN
that category.

> Poop Dave the 1st would claim the FCC isn't "motivated."
>
> The Coslonaut (heading for outer space) only wants to talk
> about socks. Is he really a sock-tucker?

Hmmmm....Yet ANOTHER example of Lennie initiating diminutives when
not the recipient of same from that person.

Why does Lennie continue to present evidence that supports
everyone ELSES contention that he's a spiteful and deceitful creep?

> The Avenging Angle keeps nurturing his murderous hatred.

If anyone, least of all me, was nuturing "murderous hatred"
against you, Lennie, you would have long ago been relegated to "curious
footnote" in the history of this newsgroup. The opportunities and the
technology are just too numerous and available to have not availed
themselves to your overdue demise.

> The University Lecturer wants to talk about highways.

And he IS a university lecturer. And YOU were...?!?!

> This newsgroup be gettin' FUN-EEEE!

Help, Lennie...seek HELP...And NOT from spouses' who's certificate
are endorsed "K-Tel Skool of Sigh-Kyatry"

> Too bad the PCTA extras aren't talking about amateur radio
> or the morse code test issue.

We do. This is not the ONLY forum in which we can express
ourselves. Since we HAVE Amateur licenses, we can actually discuss
AMATEUR matters ON-THE-AIR!

You, on the otherhand, and with the exceptions of cellphones,
cordless exensions, and CB radio, cannot.

Putz.

What ways are YOU serving, Lennie?

Filling sandbags at one mysterious "diaster" in 19 70-something
was the LAST contribution we were treated to.

Of course, considering your embittered and belittling rants
against anyone who dares to do anything that doesn't involve an
exchange of coin-of-the-realm for thier services, one could
successfully argue that by staying out of our way was, in it's own
twisted way, a "service". You'd just get your feelings trampelled on
when no one immediately recognized your infinite wisdom on yet ANOTHER
discipline in which you have no practical experience and you'd then be
on yet another rantfest.

> So...U.S. amateur radio is all about morse code and taking the
morse
> code test?
>
> That seems very odd. In fact, it seems irrational...to normal
folks.

Actually, YOU are the ONLY one in this forum trying to make that
assertion!

That you are neither an Amateur licensee, nor have you ever been
one is the really irrational part.

> Tsk. There's so much background noise about personalities in
> here it's almost impossible to get back to the subject.

There's nothing to discuss. Lennie.

Nothing else said in this forum will affect the decisions to be made in Washington.

> Now, you go back to "serving your country in those OTHER ways."

In what ways do YOU serve your country, Lennie?

Please do not tell us about all those battlefield sacrifices in 1950. You weren't there. If you suffered so much as a scuffed knee in the Army, it was from being down on them trying to convince SOMEone of your value to the Army.

As we can see, it was ineffectual.

> Your country thanks you.

Yours would thank you, Lennie, if we could find something in the last 50 years to thank you FOR.

Putz.

Still waiting to see in what "other ways" Lennie serves HIS
country.

SINCE the assassination of President Kennedy would be nice, since
we can't seem to get Lennie out of 1953.

Reminds me...A contemporary music group called "Bowling for Soup"
has a side-splitter of a song called "1985". It's about a woman named
Debbie who's "...preoccupied with 1985". Some alternative lyrics with
Debbie's name exchanged with Lennie's and "1955" for 1985"...I'm gonna
have to work on that and get back to the group...It outta be good!

One of my biggest regrets from my FIRST tour to Japan (1980) was
not buying up a bunch of Yen and burying it in a box somewhere!...It
was over Y400 to the USD then! Next time I was back (only 6 months
later) it was down to Y220 to Y250 to the USD. When I was last there
(1990) it was Y105 to Y120 to the USD. It peaked briefly at Y144 then
dropped again. I think it'be been pretty much stable in the low to mid
100's since then.

The reciprocal (JA) license was around Y48,000 in 1981. Pretty
steep! I was just tickled with my KA6 call for free!

558. Pecuniary Interest

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-18 21:14:37 UTC
From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <41eca902$1_2@127.0.0.1>
Source record: 102067

Pecuniary interest
I read a lot of articles about one K1MAN and how many amateur radio operators feel, including the FCC about Glenn Baxter "broadcast" and how there's some "Pecuniary interest" in his broadcast; mainly referring to his website www.k1man.com. But many don't talk about W1AW and the American Radio Relay League (ARRL) and it "Pecuniary interest". Like the fact the ARRL on their web site not only does it whore itself out to amateur's to join as members. But, also make amateur pay a HIGH membership fee which continues to increase. But they also on their website offer for sale books and other stuff. Now many out there would say well that is a non-profit organization and that money is used to support the ARRL and support amateur radio. No matter in my humble opinion if it's a non-profit organization or a for-profit; commerce is commerce. So no matter if it's K1MAN or W1AW "Pecuniary interest" should apply regardless of who it is. I mean paying $39 dollars for a "club" or should I say "Inc." is in my humble opinion isn't worth it. I mean what the hell they have done for me.....NOTHING! The only place I see that money going is in the pocket of their bosses. So what do you get for that $39??? A crappy magazine which is bias and half of the magazine is advertisements and it's only good as toilet paper. Hell, you would be better off supporting your local ham club which would address issues that affect you. For $39 dollars I would want something more out of club that would benefit me and I'm not talking some crappy magazine. Now I'm not saying that K1MAN is any better but before these "die hard" ARRL member start getting on these newsgroups and message boards look inside yourself and ask yourself what has the ARRL done for me??? The Amateur have over the last 20-25 years lost bands. The league isn't pushing hard enough for changes regarding BPL or PRB-1. Instead the ARRL would send the paid lackey Hollingsworth to suppress free speech on the air. The ARRL is known for their anti-no-code stand back in 1983. They are known for petitioning the FCC for some rules change that is stupid. But to me it's the ARRL pushing onto its members the idea that there is no free speech on the radio and their "Legal Advisor" and formal FCC henchman Phil Kane gets on these newsgroups and boards to spread the ARRL propaganda and lies about speech on the airways.

Depends on the size of the hench one uses....

I guess that I missed my career. I shouda' been a warlord instead
of a henchman. Whenever I hear "warlord" in a news broadcast I
flash on the character in "Terry and the Pirates" with the pigtail
and headband swinging a hatchet....

I am happy to report that at least in our club we have some very active Tech no codes participating in a wide variety of activities. Two of our club officers are no codes. One of the hams who was instrumental in getting a local antenna ordinance changed was a no code tech (unfortunately he passed away shortly thereafter). I've heard several on FM simplex and sideband. Quite a few participate in our public service events. So there are some who choose to explore other avenues of ham radio besides the repeater.

How anyone can consider the membership fee "high" is beyond me. Plain old
magazine subscriptions cost as much as the yearly membership fee that the
ARRL charges and that's just for a magazine.

At one time you said it *was* your intention, Len. So the above is obviously and provably untrue - unless you were lying back then.

January 19, 2000, you said otherwise, Len. You said you were "going for Extra right out of the box". You haven't done it.

Perhaps you changed your mind.

> I can't see such a personal identification as applying to my
> advocacy to remove the morse code test from any test.

Others can see what you cannot or will not admit.

> The subject of morse code testing should stand by itself,
> without all the hoopla over test-passing.

Agreed!

> The reality of the radio world is that morse code mode is
> either dead or dying or was never born in every other radio
> service but amateur radio hobby activity.

Morse Code is extensively used by radio amateurs, however. Today, in 2005. It's a big part of amateur radio - today.

An amateur radio license authorizes its holder to operate amateur radio stations - not the stations of any other licensed radio service. Conversely, *only* an amateur radio license authorizes its holder to operate amateur radio stations - no other radio license does so. Therefore, it is logical that the requirements for an amateur radio license should consist primarily of skills and knowledge connected with the amateur radio service.

> Even then, morse
> code is used only by a minority of those licensed as radio
> amateurs.

If you consider the total number of amateur radio licensees, that's probably true, because of the enormous number of fourth-class Japanese amateurs.

However, if you consider *FCC licensed* radio amateurs, that statement may or may not be true. Repeated polls and surveys on the subject have shown that a majority of US hams do indeed use Morse Code at least some of the time.

Even if your claim is true, Morse Code *is* used by a large percentage of FCC licensed radio amateurs. Were license requirements to be limited to only those things done by a majority of radio amateurs, there would be almost no test at all for an amateur radio license.

> The attempt to "justify" (realistic word is rationalize) the
> morse code test is specious.

In your opinion. Others have very different opinions.

> It serves no real purpose to
> anyone desiring an amateur radio license...other than to act
> as an "initiation rite" that is kept only because so many others
> in the past were required to take that test.

Your opinion again.

The popularity and use of Morse Code in amateur radio is a sound reason for there to be a test for it as part of the license process. The required testing level has been reduced to a very basic level, and accomodations added, so it is not a barrier to the vast majority of those seeking an amateur radio license.

> The federal
> government is NOT obliged to maintain fraternal order
> initiation rites.

It is only your opinion that the test is such.

> That is something for membership groups,
> not something for anything codified into law as regulations.

> The argument maintenance of the long-timers boils down to
> (via brainwashing by even longer-timers) them having to take
> the morse test, therefore all others have to take it also.

No, it doesn't.

The argument boils down to the idea that amateurs use the code, therefore a test for it is reasonable.

Amateur radio is unique among radio services in that licensed amateurs have unequalled freedom to design, build, repair, and operate radio equipment, without undue certification requirements. Technical knowledge, skill, experience and education are among the bases and purposes of the ARS. Morse Code facilitates these goals because equipment for the mode can be simple or complex, highly effective, and use a wide variety of technologies.

> That
> would be valid only if the ARS were an Amateur Radiotelegraphy

> Service. It is not.

Radiotelegraphy is a large part of the Amateur Radio Service.

> The morse code test in test element 1 is considered by the FCC
> as inapplicable to their need to determine the licensing
> qualification of amateur radio license applicants.

That's what FCC said in 1999 - more than 5 years ago. But they have chosen not to remove it yet, despite many proposals to do so.

Perhaps they have changed their mind.

Nor have most other countries chosen to remove it, even though the treaty requirement was removed more than 18 months ago. Oddly enough, Japan retains its code testing for 3 of its 4 amateur radio license classes.

> It remains
> (apparently) under pressure by the long-timers and the ARRL
> (not the oldest radio club) keeping it in regulations..

How do you know this is true? Who in the FCC told you their reasons?

More important, though, is the fact that the commentary to FCC by *individuals* has shown majority support for continuation of code testing. This was true in the comments to 98-143, and in the total comments to the 18 or so proposals on the subject filed with FCC since July 2003.

> because
> they all feel that it is "necessary" (they had to take a morse
> test, therefore all others have to).

Perhaps *some* feel that way. Not all.

I don't feel that way.

> Some morse code devotees consider the test necessary to
> "preserve and protect" manual telegraphy skills.

Is that a bad thing?

> The FCC is
> not chartered as either a historic preservation agency nor as an
> academic one. Its lawful activity is simply to regulate ALL U.S.
> civil radio.

Regulation includes the protection and preservation of important resources. That's why we have national parks and wilderness areas. One aspect of amateur radio *is* similar to that of the national parks and wilderness areas.

> Unless there has been some covert activity to circumvent the
> Constitution of the United States, all U.S. citizens have the right
> to "petition their government with their grievances."

That's right. *ALL* citizens. That includes those who are licensed,
and those who are not.

> In smaller
> words that means they can comment to any agency of the
> government about any laws or regulations made by that government.
> "Membership" in any particular agency's activity is NOT required.

Who ever said it was?

The important and unanswered question is: why is someone who is not
a licensed radio amateur, nor a manufacturer of amateur radio equipment,
nor otherwise involved in amateur radio other than newsgroup postings, so
obsessed with the regulations for an amateur radio license?

> Apparently, some in here seem to think that ONLY licensed radio
> amateurs "should" comment on amateur regulations or that any
> who so comment are "wishing to get a license."

Who, Len? Be specific.

> I do not so "wish."

Maybe not now, but five years ago tomorrow you said something very different.

> That is NOT a "requirement" nor is there any "motivation" to do so.

That's *your* problem.

> The elimination of the morse code test is simply long overdue and
> should be done for the benefit of ALL citizens, not some aging
> fraternity boys wanting to keep an initiation rite forced upon others
> for no reason but their own personal desires.

That's simply your opinion, plus some gratuitous insults thrown in. Nothing
more.

> Those individuals
> are NOT a regulatory agency at all despite their implications.

Who, Len? Be specific.

> The elimination OR the retention of morse code testing can be
> discussed on its own merits, not the "accomplishments" of a few
> who cannot justify their side of the discussion.

Then do so, rather than simply deriding those who disagree with you.

> You would do better to copy the methods of others and attempt
> defamation of the person of those wishing to eliminate the code test.

??

What in the world does that mean?

Seems that you are *requesting* that I "attempt defamation of the person" of
others. Including you.

Why should I do that?

> That IS the way of those PCTA extras found in here.

Who, Len? Give some examples. But be prepared to also see references to how *you* have behaved towards those who disagree with you.

Sorry. Someone insults me, I give 'em back lots more.

So far, in this Din of Inequity, the few, the proud (of themselves),
the murines (eyewash) wan't to pummel and pound on any
NCTA...especially using personal pejoratives.

> You never know what might happen.

Sorry, sweetums, I've seen what has already happened. So have
you and everyone else accessing this newsgrope.

> Then again, I suspect you enjoy things just the way they are. 8^)

You are WRONG. The PCTA just can't take opposing views
on the morse code test. They get so very bitchy and angry
and demand to get all who argue against the retention that it
becomes a repeated comedy of brainwashing phrases by them.

No problem on my replying in kind to the PCTA...if I have the
time to spend on their trite, tired, tintabulation of olde-tyme
phrases. I'm busy with lots of other things, but I can find time
once in a while to puncture their arrogant balloons of old, stale,
hot air.

Who was talking "barriers?" :-)

There isn't ANY other mode/modulation test for radio amateurs in the
USA, hasn't been since the first radio regulating agency was formed.

Not only that, that "vast majority" of yours is nonsense. Those very
numbers you spout periodically don't show that. You might try taking
off your blinders and looking to see how many NO-CODE Technicians
are new licensees.

>> The federal
>> government is NOT obliged to maintain fraternal order
>> initiation rites.
>
>It is only your opinion that the test is such.

Oh, no, you're not going into your schtick of "I am wrong" again,
are you?

Your vaudeville act got the hook long ago. Retire it into the
wings and work up a new routine.

Tsk, tsk, TSK. More amateurs use VOICE (by polls). There's never
been any amateur test for voice modes.

>Amateur radio is unique among radio services in that licensed amateurs have
>unequalled freedom to design, build, repair, and operate radio equipment,
>without undue certification requirements. Technical knowledge, skill,
>experience and education are among the bases and purposes of the ARS. Morse
>Code facilitates these goals because equipment for the mode can be simple or
>complex, highly effective, and use a wide variety of technologies.

And that justifies keeping the morse code test. Uh huh.

Name how "morse code facilitates those 'goals'". Show your work.

>> That
>> would be valid only if the ARS were an Amateur Radiotelegraphy
>> Service. It is not.
>
>Radiotelegraphy is a large part of the Amateur Radio Service.

Voice communications is much larger. Tsk, tsk.

>> The morse code test in test element 1 is considered by the FCC
>> as inapplicable to their need to determine the licensing
>> qualification of amateur radio license applicants.
>
>That's what FCC said in 1999 - more than 5 years ago. But they have chosen not
>to remove it yet, despite many proposals to do so.

They don't want to fight wars with olde-tymers. Would be a scandal
to see the elderly be such victims of seeing the amateur world AS
THEY KNOW IT destroyed before their old eyes.

>Perhaps they have changed their mind.

Perhaps you are mistaken!

Try reading FCC 90-53. :-)

>Nor have most other countries chosen to remove it, even though the
>treaty requirement was removed more than 18 months ago. Oddly
>enough, Japan retains its code testing for 3 of its 4 amateur radio
>license classes.

Are you going to get a Japanese ham license, benjo-san?

>> It remains
>> (apparently) under pressure by the long-timers and the ARRL
>> (not the oldest radio club) keeping it in regulations..
>
>How do you know this is true? Who in the FCC told you their reasons?

How do you know this isn't true? Who in the FCC told you otherwise?

>More important, though, is the fact that the commentary to FCC by
individuals
>has shown majority support for continuation of code testing. This was true in
>the comments to 98-143, and in the total comments to the 18 or so proposals
>on the subject filed with FCC since July 2003.

You read them ALL? Would you testify as to such an opinion in
court under penalty of perjury?

>> because
>> they all feel that it is "necessary" (they had to take a morse
>> test, therefore all others have to).
>
>Perhaps *some* feel that way. Not all.

A lot more than SOME, sweetums.

>I don't feel that way.

Nobody gives a fignewton what you "feel" Nun of the Above.

>> Some morse code devotees consider the test necessary to
>> "preserve and protect" manual telegraphy skills.
>
>Is that a bad thing?

Is morse code "state of the art?" :-)

>> The FCC is
>> not chartered as either a historic preservation agency nor as an
>> academic one. Its lawful activity is simply to regulate ALL U.S.
>> civil radio.
>
>Regulation includes the protection and preservation of important
>resources. That's why we have national parks and wilderness
>areas. One aspect of amateur radio *is* similar to that of the
>national parks and wilderness areas.

Well then, have Congress transfer U.S. amateur radio licensing
to the National Park Service!

>> Unless there has been some covert activity to circumvent the
>> Constitution of the United States, all U.S. citizens have the right
>> to "petition their government with their grievances."
>
>That's right. *ALL* citizens. That includes those who are licensed,
>and those who are not.

Really? I thought the PCTA extras in here were all for the
suppression of the Constitution of the United States. They sure
give that impression.

>> In smaller
>> words that means they can comment to any agency of the
>> government about any laws or regulations made by that government.
>> "Membership" in any particular agency's activity is NOT required.
>
>Who ever said it was?

Poop Dave the 1st. He demands, you demand "motivation."

>The important and unanswered question is: why is someone who is not
>a licensed radio amateur, nor a manufacturer of amateur radio equipment,
>nor otherwise involved in amateur radio other than newsgroup postings, so
>obsessed with the regulations for an amateur radio license?

See? YOU demand "motivation" plus rulings on the admissability
of any commentary!

Tsk. You got admitted to the wrong Bar.

>> Apparently, some in here seem to think that ONLY licensed radio
>> amateurs "should" comment on amateur regulations or that any
>> who so comment are "wishing to get a license."
>
>Who, Len? Be specific.

OH? Am I - again - REQUIRED to state, for the record, something?

You must have short-term memory loss. Poor baby.

>> I do not so "wish."
>
>Maybe not now, but five years ago tomorrow you said something very different.

Tsk. Five years ago you couldn't read any better than you do now.
Which is to say rather poorly.

Gosh. FIFTY-FIVE years ago I said "differently." Are you going to
handcuff me and charge me with a felony something?

>> That is NOT a "requirement" nor is there any "motivation" to do so.
>
>That's *your* problem.

Why is it my "problem?"

Is anyone "defective" or "morally wrong" for not wanting to do as you
demand?

>> The elimination of the morse code test is simply long overdue and
>> should be done for the benefit of ALL citizens, not some aging
>> fraternity boys wanting to keep an initiation rite forced upon others
>> for no reason but their own personal desires.
>
>That's simply your opinion, plus some gratuitous insults thrown in. Nothing
>more.

Poor baby. Strong language and differing opinions causing you
psychological trauma?

Maybe you should turn off your computer and go do some DX on HF
with CW...you know, like the "real hams" are supposed to do.

>> Those individuals
>> are NOT a regulatory agency at all despite their implications.
>
>Who, Len? Be specific.

Poop Dave the 1st. The Avenging Angle of Dearth. That's two.

>> The elimination OR the retention of morse code testing can be
>> discussed on its own merits, not the "accomplishments" of a few
>> who cannot justify their side of the discussion.
>
>Then do so, rather than simply deriding those who disagree with you.

See? There you go again, not justifying anything but adding all
those pejoratives about persons not agreeing with you.

>Seems that you are *requesting* that I "attempt defamation of the person" of
>others. Including you.

Nooooo...you ARE attempting to defame anyone not agreeing with you.

Quod erat demonstrandum.

>Why should I do that?

Who knows? A dermatologist-psychologist would determine your skin
is WAY too thin to stand the rigors of opposing opinions.

>> That IS the way of those PCTA extras found in here.
>
>Who, Len? Give some examples. But be prepared to also see references to how
>*you* have behaved towards those who disagree with you.

I've named them, sweetums. Now stop waving that court order around
and show your shield. Tsk. You radio kopps sure don't know procedure.

The Avenging Angle "will always be a marine." :-)

The Angle of Dearth does more...he tries to get folks he no
like off of public venues and robs them of free speech.

He's been in those "seven hostile actions" so he fights with
his four neurons, thinking up nasties.

An amateur. [not speaking about radio there...]

I knew you had a thing for guys.

But we also knew then, and know now, that you are a pathological
liar.

You proved it before January 2000, you've re-proved it every month since, and I have no doubt you'll continue to prove it in the future.

It's about the only thing you've done consistently throughout your life.

That's why you were then, are now, and shall continue to be a putz.

Embrace it.

> I have.

Actually, in most cases, you take threas on other topics and try
to insert a Morse Code redirect.

People don't want to discuss Morse Code testing anymore because
most people (those who read something OTHER than their own work...)
know that the issue is moot at this point. Nothing else stated in this
forum will change Federal policy.

> > Try to refrain from the pejoratives
>
> Sorry. Someone insults me, I give 'em back lots more.

Yet another monumental lie.

Neither Jim Miccolis nor Mike Coslo do anything of the kind, yet
you pour it over Jim like molasses, and you've started in on Mike.

You did it to me, you'v done it to EVERYone who's ever dared to
suggest that YOUR opinion doesn't match theirs.

You do it on a whim, then cry foul when it gets fed back to YOU.

> So far, in this Din of Inequity, the few, the proud (of
themselves),
> the murines (eyewash) wan't to pummel and pound on any
> NCTA...especially using personal pejoratives.

Sorry Lennie...it's the level at which you function, and I'd hate
to leave you out of the conversations.

> > You never know what might happen.
>
> Sorry, sweetums...(SNIP)

Point made.

I have yet to see Mike refr to you by anything other than your
expressed preferred names.

Thanks for proving my point right here in THIS post (as if I would
have had to wait long anyway.....)

> (UNSNIP)...I've seen what has already happened. So have
> you and everyone else accessing this newsgrope.

And they just got a prime example of why everyone else in this
newsgoup is justified in their opinion of you and why you are a
disreputable liar.

Thanks.

> > Then again, I suspect you enjoy things just the way they are. 8^)
>
> You are WRONG.

>>IF<< Mike had been wrong, you would have continued to address
him with out the insulting diminutives and "endearments".

> The PCTA just can't take opposing views
> on the morse code test. They get so very bitchy and angry
> and demand to get all who argue against the retention that it
> becomes a repeated comedy of brainwashing phrases by them.

Actually the comedy comes from watching a pathological liar
continue to make excuses for his lies and misdeeds, only to get caught
up in even MORE lies and misdeeds.

> No problem on my replying in kind to the PCTA...if I have the
> time to spend on their trite, tired, tintabulation of olde-tyme
> phrases.

Then why the continued use of diminutives against people who do
not do it to you?

Why do you insist that you ONLY do it to people who do it to you,
when there's almost a decades worth of evidence to the contrary with
Jim Miccolis alone, and now you have started in on Mike Coslo.

> I'm busy with lots of other things...(SNIP)

No you're not. There's not one iota of any evidence in any other
forum of a single contructive effort with your name attached to it.

You're an egotistical, mean old man with nothing left to do in his
life except make other people as miserable as you are.

> (UNSNIP)...but I can find time
> once in a while to puncture their arrogant balloons of old, stale,
> hot air.

You can TRY, but so far all you've done is prove what WE have been saying all along.

Leonard H. Anderson is a liar.

Leonard H. Anderson is untrustworthy.

Leonard H. Anderson is deceitful.

And it's Leonard H. Anderson who provides the proof of the accusations.

Thanks.

You've single handedly done more to undermine your "advocacy" than any other VALID arguments could ahve done.

Who wants to be associated with an issue that is so voiciferously and embarassingly represented by the likes of you...??? Just do the world a favor and stay away from such issues as finding an AIDS vaccine, cures for cancer, or preventing birth defects.
Putz.

None that I know of. It is one of those words similar to what
Blackguard once used in here, "Diarrhetoric".

A neologism, as it were.

Another name for such words is "sniglets", especially if of the
humorous variety. You enjoy wordplay, try it out. Wikipedia has some
examples:

http://en.wikipedia.org/wiki/Sniglet

> What is "angey?"

I'll explain that too..... Some times when making a comment about
spelling, a person purposely slips in a few typos of their own on
purpose, such as "angey" and "speling".

Ahh, there is the problem. You make the fairly common mistake of assuming that all Hams want to do is talk to each other. While there is no doubt that there are those who just want to yak with someone hundreds of miles away about their hemorrhoids, or about how leeburuls will be the ruination of the country, there are a lot of us who like building things, learning about radio, working with or against propagation, all the things that make Ham radio Ham radio.

Now to address your specific questions and statements:

>> Like I said why should someone spend the time and money to talk to
>>some moron on the radio when they can do it on the internet???

I don't want to talk to morons at all.

> If you were go on
>> the streets and ask people what would they do. Get a ham license or get on
>> the internet the majority would say internet.

True, but it is irrelevant. A lot of people want to do things that the internet has, but Ham radio doesn't, such as shopping, news, porn, or hanging out in chat rooms, trying to entice young ladies into illicit affairs.

OTOH, Ham radio offers things that the internet does not.

>> No matter how easy the FCC
>> makes the licensing process ham radio will not continue to grow unless
>> changes are made.

Here I more or less agree, but for apparent different reasons. Somewhere, somehow, we have all fallen into trap that everything has to be made "easy". We have reached the point where a technically competent person is becoming some sort of "geek god", that speaks a strange language" and gets the rest of the world out of their technical problems. "Just show me what button to press" has become the battle cry of the technically incompetent, as we sink further into the pop culture/ reality tv world of the celebration of ignorance.

My experience is that it is not possible to ever make anything easy
enough for most people. The less to learn, the less they will want to
learn. Do we want to attract people who want to learn as little as possible?

> No matter how easy the FCC
>> makes the licensing process ham radio will not continue to grow unless
>> changes are made. Those changes are technology, and content .

Content? It sounds as if you are saying that if we want to "compete"
with the Internet, we have to become like the internet? That is a recipe
for quick oblivion.

So let us expand your vision. As the amateur bands fill up with people
like you and K1MAN, available space for the rest of us to actually
operate our own stations will radically diminish. Your ideas are
actually tantamount to having every inch of the amateur bands taken over
by "broadcasting" by whatever fringe elements that want to get their
message out there.

No thanks! 8^)

Chicken and egg syndrome? Given the history of posters here, I would suspect that if you were to adopt a different strategy, there would be some posts that would be provoking. However, if ignored, that stuff goes away.

>
>> Then again, I suspect you enjoy things just the way they are. 8^)

Seriously? You don't enjoy tweaking people? So another description of what you are doing is that you are engaging in something that you hate to do, in the interests of eliminating the Morse code test, in a Usenet newsgroup? Are you making some sort of Quixotic sacrifice in a Usenet newsgroup in an attempt to eliminate Morse code testing?

590. Morse key/keyer question (OT)

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-19 15:43:17 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <d9SdnXtfGqOOHXPcRVn-ig@adelphia.com>
Source record: 102011

Hey all,

I'm having an situation with my Keyer/Key setup.

Every once in a while, I'll get a double when I shouldn't. It's usually on the dit side.

The key is a home-brew Iambic. The radio is an IC-745. THe contacts have been cleaned, to no avail.

Anyone have a similar situation or know if this may have been an issue with the 745? I'm going to try a few experiments, but any help is appreciated.

No, Len. "Desperate".

> BWAHAHAHAHAHAHAHAHAHAHAHAHHEHEHEHEHEHEH.
>
> Excuse me, yer lordship, lost control there... Bwhaha...oops.

You do appear to be desperate for attention.

> >After all, how does it affect *him* if some ham reads his
> >words, thinks they're true, and operates illegally?

> HAMS rule amateur radio.

You seem to think so, but you're mistaken. Just as you are mistaken
about the legality of FCC-licensed radio amateurs operating amateur
radio stations while their amateur radio licenses are expired but in
the grace period.

> FCC doesn't require commissioners or staff to hold amateur radio
> licenses in order to regulate U.S. amateur radio.

That's true. Those people *are* required to have other qualifications,
though, and to be appointed to their positions.

You're neither a radio amateur nor part of the FCC. And you never have
been, Len. You don't have the qualifications to be either.

> Ergo, J.P. logic has it that NO HAM SHOULD OBEY THE FCC
> IF THEY DON'T HAVE HAM LICENSES!

Nope. Nowhere do I say that. You're simply mistaken, Len.
What I will say is that *you* do not "rule amateur radio", Len.

Bingo.

btw, it's been exactly five years since Len said he was going for Extra right
out of the box.

(check Google - it's hilarious)

He said maybe he'd make it, maybe he wouldn't. He hasn't made it. Yet.

Perhaps we should all clap our hands about that. ;-) ;-) ;-)

All amateurs should move to the internet

> > Let's get rid of amateur radio all together and

> > Why should we do that?

Because someone said I should have my information bulletin on the web. Since
that's the solution then maybe we should ALL go the web and the FCC auction
off all the spectrum we have.

> >All the stuff the amateur do can all be done on the

> > emergency when the phone lines are down?

With the advancement of the internet with BPL and wireless. I'm sure some
moron will come up with a way so the internet will remain on while
phonelines are down. The majority of amateur don't contest.

> > I sure all the amateur bands could be used for another service.
>

well like I said the solution as one person put it is to put stuff like
information bulletins on the internet.

Well Dave where or should I say what do you see amateur's doing in 10 to
15??? Me, I think if ham radio is still around it will be the same old
boring shit that has been going on these last 20 to 25 years. Here's
something to think about why should someone get a ham license when you can
talk all over the world on the internet? Why will amateur radio die? because
technology is passing ham radio up and I know you old ham operator don't
want it hear it. But the reality is ham radio is getting to the point were
it is no longer really needed.

> > No matter what you might think that's a reality.
>
> It does matter what I think. You've still provided no evidence to
> support your claim.

Like I said why should someone spend the time and money to talk to some
moron on the radio when they can do it on the internet??? If you were go on
the streets and ask people what would they do. Get a ham license or get on
the internet the majority would say internet. No matter how easy the FCC
makes the licensing process ham radio will not continue to grow unless
changes are made. Those changes are technology, and content .

(a) it's not an FCC rule and is open to court interpretation.

(b) look up the case law based on that section and see why there is
no "free speech" right in an amateur license.

Not true there are a lot of the public listening to amateur radio, more then
what you think. I picked that band so not to cause harmful interference or
have some licensed CB Operator aka ham operator claiming they were on
frequency and I was causing interference.

No you dumb ass I'm mainly a person from his district who has concerns and
like any other citizen of this country can petition the government. You
shouldn't of sleep through goverment class or you would of learned that.
Secondly, my issues had to due with the licensing process not
micro-broadcasting. I will say this Philly I know a number in the
"micro-broadcasting" movement who would say a lot of the shit that you
posted on this newgroup about the movement is that...shit.Oh I'm sorry your
the big man during the Dunifer case but there were other cases and there are
still is cases going on.

Well that's not what i'm broadcasting..and since you haven't hear my
broadcast you can not justify say that.
perhaps you've been on the CB band too much or 80 meters.

609. RAC Bulletin - Industry Canada Posts Responses to RAC Recommendations on Morse Code

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-19 23:25:26 UTC
From: Leo <nomail@noway.com>
Message-ID: <egqtu09a1v3e4ngo6k691o7tiv68rufhak@4ax.com>
Source record: 102025

The following bulletin was sent out today by the Radio Amateurs of Canada HQ:

>>>>>

Industry Canada has analyzed the responses to the public consultation called under Canada Gazette Notice DGRB-003-04. A summary of the comments received and the individual replies are now available on the Industry Canada web site at

http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf08280e.html.

Amateurs should note that while the responses heavily favoured deletion of the Morse Qualification as a requirement for access to the HF bands, Industry Canada still has to make and announce a decision on Morse retention or deletion. Until a decision to delete Morse is announced, amateurs who do not hold the Morse Qualification may not operate on the HF bands below 30 MHz.

>>>>>

It's almost over up here now - decision time is just around the corner!

to her.

Classic show, Laugh-In. Actually caused some phrases to enter the language ("you bet your bippy"). Also introduced comedy greats such as Lily Tomlin ("one ringy dingy...") and Flip Wilson, who would later have his own show.

The characters you describe were named Gladys Ormphby (Ruth Buzzi) and Tyrone F. Horneigh (Arte Johnson).

Typical routine:

[Gladys is sitting on bench, Tyrone sits down next to her and she scoots over nervously to get away from him]

Tyrone: "Would you call my face ruggedly handsome?"

[Gladys bashes him over the head with purse]

Tyrone: "Would you call my body sensuously attractive?"

[Gladys hits him with her purse again]

Tyrone: "Would you call my next of kin?" [Tyrone falls off bench]

--

Of course the show had its roots in vaudeville and burlesque, and drew on a variety of sources, such as "Pigmeat" Markham ("sock it to me" and "here come da judge"). "Gladys" was developed by Ruth Buzzi, when she was in an off-Broadway show with a minor part as a cleaning lady, and was actually a cleaning lady offstage to make ends meet.

Flip Wilson's show, which was sort of descended from Laugh-In, gave us the computer term "WYSIWYG". It was derived from a catchphrase used by Wilson's character "Geraldine Jones", who would often declare "What you see is what you get" and "when you're hot, you're hot".

Well, your experiences have been entirely different from mine, then, Mike.
Long, long before I ever discovered the "newsgroupie" thingy, my husband and
I had discovered "chat" rooms. We were participants in many, many venues
and, in several, were even clannish to the extent of forming parties and
get-togethers wherein travel was often involved to get to the area where we
were all to meet and have dinners/lunches, whatever.

In nearly all cases, the people we met in person were vastly, and I do mean
VASTLY, different from their personalities online. I would say that, of
about or around 100 people, 2, maybe 3, (not including ourselves) were
"normal." Not to insult anyone, but I would define normal as in: relative
to our frame of nature, background, etc. What we considered proper and
presentable was mostly different from the folks we met. In fact, it was
meeting the folks that drove us from the whole "enjoyment" we THOUGHT we
were having with these chat rooms...LMAO!

>
> It is like people claiming that alcohol causes them to do evil and
> antisocial things. Sorry, but they were already evil and antisocial. The
> alcohol simply allowed them to shift the blame.
>

Oh, I wholeheartedly believe that. However, I believe that it was the nature of the "incognito" status that maybe shaded how we really thought people were. I mean, what one may find humorous in the text venue, may turn out to be outright obnoxious in person. The apparent sweetest person on the planet Earth, online, becomes in person, the most nearly evil person one's ever known.

Even I, as crass as I am (and I am) have manners in public and do not take pride in embarrassing people and generally know the line. Many we met were oblivious to society boundaries and were quite embarrassing to be around.

>

MMMmmm mmmm, gotta disagree there. Why? Because, here in this newsgroup, I probably have a reputation for being pretty antagonistic. In person, I am very deliberate, cautious, calculating and very, very mindful of keeping a group of people, who may lean toward being argumentative, on the friendly and "get along with each other" end. If you knew me in person, as many do, you'd be told by others that I am one of the most cohesive building partners anyone's ever met. I am also generally in a position of listening, collaboration, and leadership--and take great pride in being very good at it.

Here, to hell with all that. In fact, it has in the past been a great tension reliever. I don't generally care about anyone on this newsgroup because I've taught myself not to care about people I really don't know--and I really don't know anyone here except, maybe, Cecil...and he's a great guy from what I met of him.

Yes, my mileage definitely varies. I've been way too exposed to way too many people in the past, who were internet "friends" until I met them...good Lord thank God they're many, many, many miles away.

Having come from one line of great debaters (when I was in school) you'd be hard pressed to "know" the real Kim coming out of a debate arena--and I consider this newsgroup as a great arena for debate. And, my--IMHO--6th Grade teacher went about enhancing our debating abilities by making us take an opposing point of view from one we'd rather have taken. So, I learned to play Devil's Advocate and have--in my adult life--been known to appear to be thinking along the lines of one way but what I was actually doing was testing the convictions of another's beliefs. I actually (for real) enjoy that very much--for real.

So, I have written things here that are quite, quite different from how I really feel. Why? Testing the waters, bringing out the worst and/or best in someone, etc. The one thing I have never lied about is that I never lie. (GRIN)

>later) it was down to Y220 to Y250 to the USD. When I was last there
>(1990) it was Y105 to Y120 to the USD.

So if you'd bought $100 worth of yen in 1980 (40,000 yen) and then converted it
back to dollars in 1990 when the rate was 110, those 40,000 yen would be worth
$363.

I did better than that in the stock market back about then....;-)

> being white. A blue eyed moron is speaking.

True, we do have our share of abject white trash and
lower class trailerhouse dwellers on various places across 75 Meters.
Been that way for years. Their ranks seem to have thinned
out a tad however over the past years, with R.H. cracking
down on some of the more nefarious places on the bands.
You can still hear a few of these throwbacks to a more 'ignorant time'
in American history on ham radio. One place that comes
to mind is 3860 at 8:00 PM eastern. At that time every weeknight
something calling itself the 'Eastern Regional Patriot Net' fires
up to share the latest paranoia stories and short-wave radio pabulum
that's making the rounds. (black helicopters, contrails, nanobots in
flu shots, water fluoridation and Ishkabibble Mohammed Patel what
runs the Dunkin-Donuts-for-Allah is fair game for all manner of rumor grist
and fear mongering - think of it as the Liberty Net on steroids...)
Most notable on this freq. is a guy who checks into this Net each night
allegedly from KY with the 'callsign' of "Wolfman Jack". No valid ham
radio call given for several months. (some suspect he's a former member
of the KY militia who's a friend of kookball Steve Andersen of United
Patriot Radio fame, although this is likely more ham radio BS) So dear
SWL's, if you want your nightly dose of deep-fried KookinSchlong breaded
sausages on a bed of grits with cornbread on the side, be sure to toon into
3860 at 8PM EST nightly. You'll feel like your right back in Porky's Bar in
the Backwaters of the Bayou with the good-ole-boys. (Note: tinfoil hats,
old construction worker Dickey and/or red plad shirts are highly
recommended, although some nights it's better than 3 old wimmen in
pink nightgowns and slippers and hair curlers chattin over the backyard
fence...right out of Monty Python TV Series...)

Yeah that probably would be disappointing. I have very little
experience in chat rooms, but it seems that many people in them are
trying to impress other people in some fashion.

Hah! It is possible, I suppose! Am I as I post, or am I a weirdo? Or
does the way I post indicate that I AM a weirdo? I've posted enough in
this newsgroup that an observer should be able to tell a lot about my
actual personality. Granted, I don't try to hide it or blast people for
stress relief, so I should be easy.

No, Todd. The suggestion was for you and others who want to play "boy
broadcaster".

> > >All the stuff the amateur do can all be done on the

That's pretty unlikely. Not only do the phones go out in summer and
winter storms here, often the power goes with it. Not all of us live in
cities, Todd.

> The majority of amateur don't contest.

Where was anything written about contesting?

I'm not promulgating information bulletins. I suppose that means I'll
stick to the ham bands.

You see, Mike, this is just another occasion in which Len has done the
things he says he never does. To balance things out, he often doesn't
do the things he says he'll do.

I don't know about all of them, Todd, but I'll likely be doing the same
or similar things to those I'm doing now. Did you mean minutes or
years?

> Me, I think if ham radio is still around it will be the same old
> boring shit that has been going on these last 20 to 25 years.

If you find amateur radio boring, try something new. Take up PSK-31 or
ATV. Brush up on your CW skills. Homebrew some projects or a linear
amp.
Experiment with antennas. If that doesn't work, find a new hobby--maybe
Part 15 broadcaster.

> Here's
> something to think about why should someone get a ham license when you can
> talk all over the world on the internet?

I can talk all over the world on a telephone or cellular phone too. Why would I want to do that? If you find chatting via internet fascinating, take it up for yourself. Don't try to convince me that it is what I want to do.

"Hello? Djarkarta? This is Dave in West Virginia. What's the weather like over there?"

> Why will amateur radio die?

You haven't yet made a case that it is dying.

> because
> technology is passing ham radio up and I know you old ham operator don't
> want it hear it.

Why? Because technology isn't passing it up? I'm using Buck Rogers stuff in the shack now that wasn't dreamed of ten years ago. It didn't exist on the market until a couple of years ago. The specs are better than any government-owned radio equipment I used over an entire Department of State career.

> But the reality is ham radio is getting to the point were
> it is no longer really needed.

...by you.

> > > No matter what you might think that's a reality.

I've read your stuff here, Todd. You're semi-literate at best. If I
add that to your uninformed views, I can't find much to entice me into
listening to your "broadcast". I'd just as soon listen to guys
comparing notes on non-functioning body parts on 75m.

Let me ask the question again: What is it that you don't feel you can do on the air as a ham, Todd? What kinds of things would you air over your station which the FCC says you can't now do?

Given the "history of posters here," especially the PCTA extras,
your good idea is merely impractical bullshit.

PCTA extras all pretend to be "superior" and let everyone know it.

>>> Then again, I suspect you enjoy things just the way they are. 8^)
>>
>>
>> You are WRONG.
>
>Seriously? You don't enjoy tweaking people?

The "tweaking" is easy for me to do. Most of the postings I do
simply "write themselves." :-)

You seem to forget that I've had a long career of working in electronics.
Electrons (in electronics) do NOT get influenced by human desires.
All humans who work with electrons have to play be electron's rules.
I enjoy that kind of work. It appears cold, hard, logical but can be
quite creative once you learn electron's rules. Once that is done, they
CAN follow human orders.

The odd part of human nature is that the PCTA extras think that all
must follow Their rules, obey them, etc., and some get quite
fanciful in imagining the "motivations" of the NCTA.

>So another description of
>what you are doing is that you are engaging in something that you hate
>to do, in the interests of eliminating the Morse code test, in a Usenet
>newsgroup?

Incorrect. Your speculation is nonsense.

You forget that many more readers follow what goes on in here.
They, too, can see/read the propaganda nonsense about the
nobility and efficacy of morse code and the alleged "necessity"
of the amateur radio morse code test. Those readers need a bit
of boost on the reasons AGAINST it. Myself and others have
presented opposing reasons for that code test.

>Are you making some sort of Quixotic sacrifice in a Usenet
>newsgroup in an attempt to eliminate Morse code testing?

No. If you will bother to read the 18 petitions at the FCC you
would see that it isn't some Cervantes fictional character
exercise...but, some of the proponents of the code test are
indeed human windmills whirling in dead air.

>> The PCTA just can't take opposing views
>> on the morse code test. They get so very bitchy and angry

>> hot air.
>
>All the arguments are old and we've heard them a lot. From both sides.

Poor baby. You seem distressed. Or perhaps your lordship
wishes better entertainment?

Here is a suggestion for your lordship: Use your amateur radio
license and operate your mighty transceiver on the air instead of
accessing this newsgroup. Chat with other human beings (or what
passes for same).

Or, your lordship could take the lead and open up a real Chat Room
all about morse code on amateur radio and how wonderful it is and
that morsemanship should be done by all the "superior" beings. You
could develop a real following and become a Name in Chat Room
circles, get known, develop a "rep." Or even a website where you
could post "awards" given by the certificate makers and praise
yourself for being so damn good.

This is NOT a "Chat Room" for idle gossip and cracker-barrel
philosophy by a few regulars who have grown overly full of themselves.
Even though they think they own the place (and can therefore dictate
who gets to sit in), they don't. True. They don't even when their
feathers get very ruffled by opposing opinions. (poor things...)

Morse code is an old, primitive communications mode. The first
morse code was used in 1844...on a commercial wired system, not
on radio (radio had yet to be proved to exist). Early radio used on-
off keying codes because that was the ONLY practical way to
communicate given that there were no vacuum tubes and certainly
no transistors. Primitive stuff that was first demonstrated in 1896.
What passes for truisms about morse code "superiority" as
spouted by the ARRL was formed in the 1930s, seven decades ago.
Of course the reasons to maintain morse code testing are OLD.

The silly part of it is that so many olde-tymers insist that the old
is "best" and that nothing should change. They can't devise any
good reasons to keep that code test, nothing new during the seven
decades they've tried. All those reasons are tired, trite, cliches'
and the reasons against them are true, familiar, easy to repeat.
Again, refutation of the pro-code-test-advocates' "reasons" almost
"write themselves."

The only thing "new" with the PCTA extras is their propensity for "replying" by personal insults against the NCTA. All NCTA are "inferior" to them and their mighty accomplishments with morse. In short, they are so full of themselves that they cannot accept any others' inputs. They are stuffed and over-stuffed. Some go to the bursting point. Two former PCTA extras in here may have done just that. Other PCTA extras are expected to follow.

Perhaps you should go to Church more often...such as to the Church of St. Hiram, the patron saint of Newington. There you could mass with other morsemen and celebrate the mode in chorus with a heavenly choir. Wash your brain regularly lest all the old, tired, trite cliches' fall out. By all means, exercise your morsemanship regularly to be ready for the Second Coming of Aliens so you can defeat them via morse code and thereby Save the World. After all, you are "superior" through morse code.

In your very first sentence of reply, Lennie, you prove Mike
correct.

The "impracticality" comes from YOUR unwillingness to stop lying,
deceiving and being antagonistic. It's just not in what little bit of
a character you have to do....

And your use of emphatic profanity to try and "make your point"
only further serves to demonstrate just how angry you get when someone
makes such a well said and valid observation.

You've been bested once again, Lennie, and it cuts to the core.
Bravo, Mike

I don't know if "hilarious" was the right adjective, Jim.

I think "pitiful" is more like it.

I am sure that you, like I, have seen people with NO experience in
ANY discipline of radio communication, take a week or two of study and
walk away from a VE session with a CSCE in hand for a new license.

Pity that, then, that a person with Lennie's alleged education and
experience hasn't been able to accomplish it in five YEARS, let alone
weeks.

> He said maybe he'd make it, maybe he wouldn't. He hasn't made it.
Yet.

Oh, I don't thing there was ever ANY doubt as to Lennie's
inability to take and pass an Amateur examination.

Why? Wouldn't do them any good. Those "KA" calls in Japan are
only good for persons covered under SOFA...(S)tatus (O)f (F)orces)
(A)greement. Joe or Jane American visiting in Japan did not qualify
for an AMRS (not to be confused with MARS) assignment. Joe Nonresident
Licensee certainly wouldn't qualify either!

The "personal point" was his lack of character then, and his lack
of character now.

>From a bit farther down in that same post:

>I'm another "old man," a retired professional in
>radio-electronics engineering. Some of those tenured
>old men of US ham radio don't seem to want anyone
>with practical, professional and academic skill in radio
>and electronics technology.

Ironic, considering Lennie's penchant for antagonism, that he
wouldn't just go ahead and get the license just to prove the "old men
of US ham radio" wrong.

Of course the ONLY "old man" holding Lennie back >>IS<< Lennie!

>They seem to fear those
>who have industry-proven capabilities because that
>doesn't fit into their standards...or because they are
>insecure in not really knowing what goes on behind
>the front-panel of their factory-built equipment.

The only one having a problem with "fear" is the old man who won't
take a couple of hours to go get the license. Of course that's because
Lennie KNOWS he can't live up to ANY standards...Those "standards" of
those "old men" operating that factory built equipment that he insists
that no one but he understands, or the standards of the "old men" at
the FCC who set the "standards" of the test that he insists he can pass
blindfolded with one arm tied behind his back.

>They have difficulty in trying to put down those who know
>practical theory so they try to make fun of them

>instead...

Oh, make NO mistake, Lennie...we have NO PROBLEM putting a putz
like you "down". YOU make it SOOOOOOOO easy to do!

As for OTHERS who posses those skills and knowledge who ARE
licensed (and ACTIVE!), they ARE welcomed and much respected. Lennie
could be too...Might even find that modicum of respect and recognition
he couldn't muster in "professional" radio.
But we (and especially HE) will never know!

Great stuff, Leo! Thanks for posting it.

After following the link and reading, I see a couple of interesting points:

1) The expressed support for reduction of code testing in Canada is overwhelming. A clear mandate from those who commented.

2) The proposal, if I understand it correctly, does not completely eliminate Morse Code testing. Instead, it offers alternative ways of getting a license, with or without a code test.

3) The comment period was only 60 days long, and only about 150 people (mostly already-licensed amateurs, I think) commented.

It's interesting to note that the various code test reduction/elimination proposals here in the USA have had a very different response.

>
> Nooooo...you ARE attempting to defame anyone not agreeing with
you.
>
> Quod erat demonstrandum.

By reminding us of your previously stated opinions and actions
then turning them AGAINST you...?!?!

THAT is NOT "defaming" anyone.

> >Who, Len? Give some examples. But be prepared to also see references
to how
> >*you* have behaved towards those who disagree with you.

>
> I've named them, sweetums. Now stop waving that court order
around
> and show your shield. Tsk. You radio kopps sure don't know
procedure.

You've done nothing of the sort. You've not provided ONE
verifyable, documented quote as supporting "evidence" of your
assertions.

You HAVE provided tons of deceit, lies and "pejoratives" that you
claim others use.

Your "Nun of the Above" reference to Jim Miccolis in the opening
line of this post being of prime example.
Leonard H. Anderson is a putz.

Mike, there's a long history of Len using that sort of imagery when writing
here. Although Len will sometimes use smileys or dismiss it as a joke, it isn't
funny.

As you have experienced yourself, Len considers disagreement with his cherished
views, pointing out his mistakes, or criticizing his behavior here to be an
insult to him personally.

Sure it can, Dave. A person can "have an interest" in something, yet not want
to become part of that group. For example, I have a decades-long interest in
sexy women, but I have never desired to become one!

There's also the case of the person whose interest in something consists of
wanting to destroy it. Such a person will often deny that goal.

>1) The expressed support for reduction of code testing in Canada is
>overwhelming. A clear mandate from those who commented.

I found that quite surprising as well - the original RAC survey (which formed the basis for the recommendations made to IC) showed that around 66% of the Amateur community was in favour of retiring Morse as a mandatory requirement.

The comments to IC on those recommendations were an amazing 123 to 19 in favour of dropping code - a significant increase.
>
>2) The proposal, if I understand it correctly, does not completely
>eliminate Morse Code testing. Instead, it offers alternative ways of
>getting a license, with or without a code test.

Correct - but I suspect that this was an effort by the RAC to try and accomodate the wishes of as much of their membership as possible (which was not too well received, based on the responses...). Actually, they exceeded the request of IC considerably - the question was whether to retain Morse, but the RAC took it a step further and used it as a platform to reform the entire license structure. It is unlikely that this will be done in the short term - to quote IC:

".....the RAC proposal went substantially beyond the issue of Morse code, and made recommendations to modify the existing amateur certificate structure through the introduction of a new certificate (Intermediate) as well as a general increase in the pass level for obtaining the existing basic and advanced certificates. While these recommendations received various levels of support as indicated in the comments received, it is not clear whether each element of the proposal can be entertained without the benefit of a more comprehensive certificate review, and substantial regulatory

amendments to accommodate an additional amateur certificate."

>
>3) The comment period was only 60 days long, and only about 150 people
>(mostly already-licensed amateurs, I think) commented.

That's true - although the opportunity to comment was not limited to
the Amateur community, few (if any) others showed any interest.

60 days is plenty of time for a subject of this level of signifigance
to the public - we get things done efficiently up here! :)

Heaven fobid that a non-licensed person might comment.

Summary

On August 28, 2004, Industry Canada published notice DGRB-003-04 in the Canada Gazette,seeking public comment to the proposal submitted to Industry Canada by the Radio Amateurs of Canada (RAC), entitled, Recommendations from Radio Amateurs of Canada to Industry Canada concerning Morse Code and Related Matters.

In general, this proposal was intended to suggest how the Department might deal with the potential to implement relaxed Morse code requirements made possible as a result of the decision taken at the World Radiocommunication Conference 2003 (WRC-03). This decision gives the regulatory agencies of International Telecommunication Union member states the option of maintaining or removing the existing Morse code requirement for operating on the amateur radio bands below 30 MHz. However, the RAC proposal went substantially beyond the issue of Morse code, and made recommendations to modify the existing amateur certificate structure through the introduction of a new certificate (Intermediate) as well as a general increase in the pass level for obtaining the existing basic and advanced certificates. While these recommendations received various levels of support as indicated in the comments received, it is not clear whether each element of the proposal can be entertained without the benefit of a more comprehensive certificate review, and substantial regulatory amendments to accommodate an additional amateur certificate.

As the RAC's proposal consisted of twelve specific recommendations, we have attempted to gauge the level of public support for each of these elements as a first step in selecting a course of action with respect to the changes that will be made to the structure of the Canadian amateur certificate.

Results of Public Comment

During the 60 day comment period, the department received 150 submissions from individuals or associations (Amateur clubs, Radio

Advisory Board of Canada (RABC) etc.) Where clear support or disagreement for each element was indicated, we attempted to capture and tabulate those opinions (see graphs). However, in many instances, the comments simply indicated agreement or disagreement with the general issue of relaxing the code requirements and this was captured in a separate graph.

This analysis shows that there is overwhelming agreement that Canada should move away from having a Morse code requirement as the sole means of gaining access to the amateur spectrum below 30 MHz. There were 123 comments in favour of relaxed code requirements and only 19 that were clearly opposed. The remaining six comments were either neutral or did not address that issue.

The Department will now formulate a plan to implement the changes that have emerged from this consultation process. The results will be published in a revision to Radiocommunication Information Circular 2, Standards for the Operation of Radio Stations in the Amateur Radio Service (RIC-2), and a notice to that effect will appear in the Canada Gazette at that time.

Mike, that only goes to show that you just can't rely on that new-fangled stuff. What if Paul Revere were waiting for the signal, "One if by land, Two if by sea," and you sent him a double instead of a single. American history would have been changed. Stick to manually formed dits and dahs.

I have that problem occaisionally with a bencher single paddle key
and increasing the spacing between the points and adding a little more
spring tension solves the problem.

I like the contact spacing paper thin, but when it is too thin -- may cause
a double bounce.

Yes Bencher does make a single paddle key -- looks like the Iambic with two
paddles -- but functions as a single paddle key.

HooBoy, I haven't dealt with this one for eons. My set of henches is calibrated in the old units, was made before they switched to figs per newtons and I forget the conversion factors. Something like three figs per date and two newtons per wench so I've been using dates per wench. I'll look it up and get back to you.

I don't find the results to be a surprise at all, if the RAC survey showed 66% in favour of no Morse test. 66% is a clear majority. Here in the USA the majority of commenters have long favoured keeping the Morse test.
>
> The comments to IC on those recommendations were an amazing 123 to 19
> in favour of dropping code - a significant increase.

It's a significant increase, but there are a number of ways to explain it. For example:

- Comments require more action than replying to a survey
- The majority response to the survey may have caused fewer comments. (If 66% want something, that's a clear majority, so why comment against it?)
- Support of one view is increasing while its opposite decreases.
> >
> >2) The proposal, if I understand it correctly, does not completely
> >eliminate Morse Code testing. Instead, it offers alternative ways of
> >getting a license, with or without a code test.
>
> Correct

That's a *major* difference from "just drop the code test".

I suspect that if a similar proposal* were put forth here in the lower provinces, the support for it would be much greater than the simple "just drop the code test" ones we've seen.

* meaning a proposal where code testing was kept as an option, which could be avoided by an additional written test, or a higher grade on the existing written test. Not just "drop the code test" proposals.

> - but I suspect that this was an effort by the RAC to try and
> accomodate the wishes of as much of their membership as possible
> (which was not too well received, based on the responses...).

I see it as an attempt to build support by forming a coalition rather than dividing into opposing camps. Similar method to the ARRL proposal, but a better implementation, IMHO.

> Actually, they exceeded the request of IC considerably - the question

> amendments to accommodate an additional amateur certificate."

I see that as simple common sense along the lines of "let's do the big job and get it done, rather than a little bit here and a little bit there". RAC took the opportunity to fix a bunch of problems at once.

I suspect that if the question were simply keep Morse/drop Morse, the results would have been far less decisive. By doing it the way they did, RAC can present a clear majority opinion to IC.

That's the smart way to do this sort of thing. Come up with a proposal that garners lots of support in surveys, *then* present it to the government. Makes their job easy - just do what the majority wants.

> >3) The comment period was only 60 days long, and only about 150
people
> >(mostly already-licensed amateurs, I think) commented.
>
> That's true - although the opportunity to comment was not limited to
> the Amateur community, few (if any) others showed any interest.

That's to be expected, since (IIRC) Canada already has a nocodetest amateur license. Almost anyone who is really interested in amateur radio in a positive way, is not a manufacturer of products for the ham market, and who is knowledgeable about the regulatory process, probably already has a license.

IOW, you probably don't see a lot of people saying they really want an amateur radio license but the code test prevents them. Same as here. Those people may or may not exist, but if they do exist, they're not commenting to the FCC or to IC.

> 60 days is plenty of time for a subject of this level of signifigance
> to the public - we get things done efficiently up here! :)

Another thing the lower provinces could learn....;-)

But only about 150 comments from 44,000(?) licensees is a pretty small showing. That, to me, is the biggest surprise.

> >---
> >
> >It's interesting to note that the various code test
> >reduction/elimination proposals here in the USA have had a very
> >different response.

So I'll ask this question:

If the comments to FCC on the various proposals show that a clear majority of *individuals who bother to comment* want the code test to stay, what should FCC do? IOW, should FCC go with the majority or ignore them?

Yes. *Again*. She was married before, split with that guy and took up
with an Italian business tycoon. Said tycoon dumped her when she got in
the family way with his kid.

> I
> forget the fellows name, but he's a singer.

Seal. Seems a decent sort.

> There has to be worse fates for a guy! 8^)

Heck yes. But upon reading some of the publicity, it looks like one of
those intense/burnout things that celebrities are so good at. Like
Billy Bob Thornton/Angelina Jolie, Bennifer, Britney and her
husband-of-the-week, etc.

Nothing new there, Liz Taylor was doing that stuff a half century ago.
The difference today is that the cycle time is even faster and a lot of
them don't even make it to the altar.

Sounds like something you and Larry Roll cooked up, in preparation for
lobbying AMA to require all MD's copy 20WPM code!

"Morse code is a simple, effective and clear method of
communication and now scientists believe that cells in
our body may also be using patterns of signals to switch
genes on and off. The discovery may have major
implications for the pharmaceutical industry as the
signalling molecules that are targeted by drugs may
have more than one purpose. The number of �dots and
dashes� being used by each signal could have different
purposes, all of which could be modified by a drug."

You need to go back down to the VFW club, Hansl, and increase your dosage.

You have a point there, Steve. It is hard to convince a person that your argument is correct when you dish out abuse with your argument. one is always tempted to disregard all the good parts of the argument with the bad.

While it is always a good idea to not confuse the messenger with the message, which I always try to avoid, such a "debating" style is one of the best ways to hinder the message. It just means that you have to wade through the insults and other brickbats to find the message.

Your brush is too broad. There are over 600 kilohams in the US. You're hearing at most 100 of them, which amounts to 0.00017 (seventeen hundred-thousandths), or 0.017% (seventeen thousandths percent). That's not bad at all. Show us any other group that has such a low percentage of bad boys.

Even if there were 1000 of them, that still amounts to only 0.0017 or 0.17% of entire amateur population. The problem is that if you so much as sneeze on HF, half the world can possibly hear you; that factor is what makes their behavior stand out. If their QSOs were occurring on VHF, no one except locals would take notice.

Obviously not. Did you use the proper ARRL-approved procedure and correct prosigns?

The above message appeared on Coronation Day (20 Jan 05) download of this newsgroup from AOL.

Had there been observation of the Newsgroup NEWS on AOL you would have seen the announcement (by AOL) that they had "technical difficulties" in interfacing to INTERNET newsgroups. On that same AOL NEWS section there is NO indication that AOL will be dropping newsgroup connections to the INTERNET in "early 2005."

Suggestion: Connect to DARPANET directly and use morse code mode communications. After all, "CW gets through when nothing else will, right?"

>Steve, I never heard Len claim "four hostile actions."

The Avenging Angle of Dearth has had hundreds of hostile actions.
All in here. :-)

That seems to be the only place he can point to and be accurate.

All of those other "hostile actions" must have happened in
firefights between his alternate personalities.

It's a wonder he hasn't picked up the 'phone and used his "health
professional qualifications" to order authorities to pick up those
militant personalities. [he thinks he is "authorized" to do such]

Of course, the Great Radio Operator used "CW" in all those
military "hostile actions," saving his squad of recon marines
time and time again...at some point in time not yet on the clocks
of NIST or on calendars...and on frequencies which are all "secret"
to civilians and the rest of the government. [so secret that if he
tells us he has to kill himself?]

But that's what you post now. If changing your tactics didn't work,
you'd be no worse off than you are now.

> PCTA extras all pretend to be "superior" and let everyone know it.

All licensed radio amateurs; Techs, Generals and Extras; are your
superiors in that they have been issued amateur radio licenses. That is
something you don't have. Ah, but I forgot--this is your week not to
desire such a license.

...and they have that look. :-) :-)

> You seem to forget that I've had a long career of working in electronics.
> Electrons (in electronics) do NOT get influenced by human desires.

Have you noticed that your posts here have about the same effect upon
readers of r.r.a.p? Almost no one has been influenced by your human
desires as pertain to amateur radio.

> The odd part of human nature is that the PCTA extras think that all
> must follow Their rules, obey them, etc., and some get quite
> fanciful in imagining the "motivations" of the NCTA.

One of more odd bits of human nature has you attributing beliefs to all
PCTA Extras as if we all had the exact same thoughts and experiences.

> >So another description of

Wow! Talk about speculation! How about it, lurking, never-posting
readers of r.r.a.p? Let us know if you support the self-appointed
advocate for morse code test removal of the group. Tell us if you
believe his method is effective. Let us hear if you have been swayed by
his posts.

> >Are you making some sort of Quixotic sacrifice in a Usenet

Isn't Larry Roll really known as yodoc? I think he told me once that his
father was/is Bill Shockley!

>
>All licensed radio amateurs; Techs, Generals and Extras; are your
>superiors in that they have been issued amateur radio licenses.

There you have it. In Poop Dave the 1st's idea of the radio
world, the amateurs are "superior" while the professionals
are "inferior."

>That is
>something you don't have. Ah, but I forgot--this is your week not to
>desire such a license.

Tsk. There is NO requirement for newsgroup access to possess
an amateur radio license.

Tsk, tsk. There is NO requirement for access to the FCC requiring
an amateur radio license in order to comment on amateur radio
matters.

You make such fanciful imaginings, then pretend that whoever you
are trying to impugn really does what you say.

>> >>> Then again, I suspect you enjoy things just the way they are. 8^)

Poor baby. Never made much money writing for money?

Oh, that's RIGHT...you are an AMATEUR and don't desire to
make money! My apologies at forgetting your lofty, noble
attitudes...your attitude got hidden in all that "superiority."

>> You seem to forget that I've had a long career of working in electronics.
>> Electrons (in electronics) do NOT get influenced by human desires.
>
>Have you noticed that your posts here have about the same effect upon
>readers of r.r.a.p? Almost no one has been influenced by your human

>> yourself for being so damn good.
>
>You're outdoing yourself. What panache! What skill!

Ah, but the words are TRUE...and that makes you ANGRY.

Well, word-wise, you are still an AMATEUR.

>> This is NOT a "Chat Room" for idle gossip and cracker-barrel
>> philosophy by a few regulars who have grown overly full of themselves.
>
>You're a regular, Len.

I've been a regular Len since I was first named.

If my regularity isn't up to par, I just drop in here for some equivalent
Ex-Lax. Does the job every time. :-)

>> Even though they think they own the place (and can therefore dictate
>> who gets to sit in), they don't. True. They don't even when their
>> feathers get very ruffled by opposing opinions. (poor things...)
>
>Do your feathers get ruffled by opposing opinions?

Don't have feathers, heavenly fodder.

If I did, it wouldn't bother me. THAT is what galls you, isn't it?

You should really see a health professional to have all that gall
removed.

>> They are stuffed and over-stuffed. Some go to
>> the bursting point. Two former PCTA extras in here may have
>> done just that. Other PCTA extras are expected to follow.
>
>Your words about the dead are a tribute to your personal magnetism.

Tsk. I didn't say anything about the "dead."

If I would speak of the "dead" that would be a short form for
"dead-brained," that attribute of all those AMATEURS who insist
that the morse code test must be kept forever and ever.

>> Perhaps you should go to Church more often...such as to the
>> Church of St. Hiram, the patron saint of Newington. There you
>> could mass with other morsemen and celebrate the mode in
>> chorus with a heavenly choir. Wash your brain regularly lest all
>> the old, tired, trite cliches' fall out. By all means, exercise your
>> morsemanship regularly to be ready for the Second Coming of

>> Aliens so you can defeat them via morse code and thereby
>> Save the World. After all, you are "superior" through morse code.
>
>Yes, Len, your people skills rival those of Carl. Yessir, you really
>have Mike on the verge of changing his mind. I'm sure the throng of
>lurkers is cheering wildly.

Tsk. Another bout of Nasties from the Dale Carneige drop-out.

"Carl" who? The pro in electronics who helped change S25.5 by
going to Geneva, Switzerland, for WRC-03? That "Carl" is also
an Amateur Extra. Trouble is, he is an NCTA and that REALLY
gets your robes flying, heavenly fodder.

Tsk, tsk, fewer and fewer are swearing by the words of ARRL and
rather swearing AT the code propaganda of the ARRL. You poor
self-righteous olde-tymers are soon going to lose your bragging
rights about morsemanship being essential to your self-important
rank/status/privilege in U.S. amateur radio.

NOBODY is kissing your ring, heavenly fodder. They aren't even
bothering to tell you to kiss their posterior either. One can't swear
effectively to so much QRM from the PCTA extra bull pen. Just
noise. Self-righteous noise about their nobility and devotion to some
imaginary "service." Tsk.

You can always talk about DEFUNCT 30-year-past TV shows.

That has NOTHING to do with ham radio. Won't ruffle your overly
sensitive "feathers," will it?

Won't be about AMATEUR RADIO at all, but then what you really
want is a nice little cozy Chat Room where you be all gemutlich

in talking about whatever you PCTA extras want...and then you
can make nasty to anyone who objects to all the non-ham-radio
talk. You "own" this newsgroup because you are in it, right?

>

Awwww. Feeling hurt and agreeing with that wonderful Avenging
Angle of Dearth who loves to use Yiddish pejoratives in "signing
off" to others he no like?

Tsk. Poor spoiled little babies. Can't make the world in your
imagined images.

>> I have yet to see Mike refr to you by anything other than your
>> expressed preferred names.
>
> Remember, I did call him Lennie once. But he didn't like that, so I
>went to calling him Len. My bad!

You should get "Yiddish for Dummies" and study it. That way you
can call your newsgroup opponents by four-letter names that
no one (you think) will understand...because you probably don't
understant Yiddish either.

>> Thanks for proving my point right here in THIS post (as if I would

>> disreputable liar.
>>
>> Thanks.

Wow! "Disreputable liar" is NOT a pejorative! :-)

And the Angle of Dearth knows what EVERYONE ELSE's opinions
ARE!

Tsk, tsk. You PCTA extras have out-Orwelled Orwell in redefining
the language!

>> Actually the comedy comes from watching a pathological liar
>> continue to make excuses for his lies and misdeeds, only to get caught
>> up in even MORE lies and misdeeds.

Tsk. "Pathological liar" is an endearment? :-)

>> No you're not. There's not one iota of any evidence in any other
>> forum of a single contructive effort with your name attached to it.

Gosh...I'm "pregnant with ideas" but the "contructions" haven't
started yet. :-)

>> You're an egotistical, mean old man with nothing left to do in his
>> life except make other people as miserable as you are.

Tsk, tsk, tsk. More "endearments." :-)

Awfully good PR there, "winning friends" for morsemanship and
ham radio as you guys "know it."

Peoples must be in large queues waiting to sign up for amateur
radio after seeing the warm, friendly "brotherhood" freelings
exhibited in here. :-)

>>
>>> (UNSNIP)...but I can find time
>>> once in a while to puncture their arrogant balloons of old, stale,
>>> hot air.
>>

>>
>> Leonard H. Anderson is a liar.

Another endearment!

>> Leonard H. Anderson is untrustworthy.

Yet ANOTHER!

>> Leonard H. Anderson is deceitful.

WOW! Three in a row!!!

Yessir, heavenly fodder sure had it pinned when he talked about
swinging opinions in here. :-)

>> And it's Leonard H. Anderson who provides the proof of the
>> accusations.
>>
>> Thanks.
>>
>> You've single handedly done more to undermine your "advocacy" than
>> any other VALID arguments could ahve done.
>>
>> Who wants to be associated with an issue that is so voiciferously
>> and embarassingly represented by the likes of you...??? Just do the
>> world a favor and stay away from such issues as finding an AIDS
>> vaccine, cures for cancer, or preventing birth defects.
>> Putz.
>
> You have a point there, Steve. It is hard to convince a person that
>your argument is correct when you dish out abuse with your argument. one
>is always tempted to disregard all the good parts of the argument with
>the bad.

Riiiiight...the Angle of Dearth is very busy working on AIDS vaccines,
cures for cancer, and preventing birth defects. Doctor Avenger can't
be bothered with discussing anything in normal ways...it is His way
or the highway.

> While it is always a good idea to not confuse the messenger with the
>message, which I always try to avoid, such a "debating" style is one of
>the best ways to hinder the message. It just means that you have to wade
>through the insults and other brickbats to find the message.

Was there a "message" there? :-)

Oh, yes, there was:

Do everything that the PCTA extras say to do. Swear allegiance to
the ARRL and for everything it stands for. Insult everyone and every-
thing that deviates from that divine and noble viewpoint. No deviates
allowed! That's the ticket!

Never ever admit to PCTA extra Double Standards. None exist in
the PCTA extra hypocritical imagination. Follow the PCTA extra
orders and directives explicitly...for they are ultra-pure and always
right.

Gotta love it! Far better than a defunct 30-years-ago TV show!

I'll try that. There is an adjustment spring, but perhaps it is a
little weak and should be replaced.

> I like the contact spacing paper thin, but when it is too thin -- may cause
> a double bounce.
>
> Yes Bencher does make a single paddle key -- looks like the Iambic with two
> paddles -- but functions as a single paddle key.

That sort of key sounds logical to me. Although I'm starting to "get"
the Iambic, it still seems a little strange. I should probable see if I
et a little better before switching again.

Thanks, Mike KB3EIA -

That's simply not true. K0HB, K2ASP, and K2UNK are all against the Morse Code test. Yet neither KB3EIA nor I "defame" any of them. (There are many more examples)

Unless simple disagreement constitutes defamation.

>>>> Hmm, you possibly could:

No problem there. The interesting thing is that Len also wanders all over the map of topics as well.

>> forum will change Federal policy.
>
> Right.

Some if not all of us are simply waiting for the next step. There are almost 20 proposals before FCC. We may see even more - I could write one myself! (So could anyone else, of course).

FCC will probably put them all together into an NPRM, ask for comments, etc. That cycle will probably take at least a year, cosidering how long 98-143 took (it appeared in mid-1998, reply comments closed in early 1999, and the rules changes were announced late in 1999, becoming effective in April 2000). At that rate, if FCC announced a restructuring NPRM tomorrow, we might see a decision about June of 2006 and changes (if any) effective later that year.

Just an educated guess on my part.
>>
>>>> Try to refrain from the pejoratives
>>>
>>> Sorry. Someone insults me, I give 'em back lots more.

Len uses pejoratives regardless of whether anyone has used them on him.

It would be interesting to go back in Google and find out who called who what, and when....

>

>> And they just got a prime example of why everyone else in this
>> newsgoup is justified in their opinion of you and why you are a
>> disreputable liar.
>>
>> Thanks.

Mike, here's how it works:

Len believes in group guilt. Works like this:

Steve calls Len a putz. Repeatedly.
Steve is a PCTA Extra who posts to rrap.
Other PCTA Extras who post to rrap have not stopped Steve from calling Len a putz. Some have asked Steve to stop calling Len a putz, but Steve has refused, and still calls Len a putz. Repeatedly.

Therefore, (in Len's mind), all PCTA Extras who post to rrap are guilty of calling Len a putz. And Len thinks himself justified in calling all PCTA Extras who post to rrap any name he wants. Including "Nazi".

It does not matter to Len whether the other PCTA Extras who post to rrap have actually ever called Len a putz. Nor does it matter to Len if they agree or disagree with Steve calling Len a putz. To Len, all PCTA Extras who post to rrap are guilty of calling Len a putz.

See how it works?

Some (not me) might argue that if someone is going to pronounced guilty of calling Len a putz, then they might as well call Len a putz in reality.

But I don't buy that argument at all. I've never called Len a putz, despite all the names he's called me. I don't recall you ever calling Len a putz either, Mike.

Personally, I disagree with calling Len or anybody else on rrap a putz. Or a Nazi, jackbooted thug, elitist, or other pejorative names or diminutives.

>>>> Then again, I suspect you enjoy things just the way they are. 8^)

>>> You are WRONG.

I think you're dead-on right, Mike.

>>>>IF<< Mike had been wrong, you would have continued to address
>>>>him with out the insulting diminutives and "endearments".

>>> The PCTA just can't take opposing views
>>> on the morse code test.

Sure we can. Ask K0HB, K2UNK, K2ASP, to name just a few.

>>> They get so very bitchy and angry

>> Putz.

Uh-oh. Now we're all guilty (in Len's mind). Again.

>You have a point there, Steve. It is hard to convince a person that
>your argument is correct when you dish out abuse with your argument. one

>is always tempted to disregard all the good parts of the argument with

And that's true on both sides!

>While it is always a good idea to not confuse the messenger with the
>message, which I always try to avoid, such a "debating" style is one of
>the best ways to hinder the message. It just means that you have to wade
>through the insults and other brickbats to find the message.

The problem is that even if you ignore the insults and brickbats, you don't really get any meaningful responses from Len. For example, Len previously stated (in the context of US amateur radio license numbers) that:

"All licensees are perfectly legal to continue operating in their grace period."

Now, it was repeatedly pointed out to him that this is simply not true.

Licensees who submitted a valid renewal application before the license expired can continue to operate, but those who did not cannot legally operate until they submit a renewal application *and* FCC approves it.

But will Len admit his mistake? Nope. Instead, he heaps abuse and insults on the messengers for daring to point it out.

One wonders how, or if, Len will respond to K2ASP's posts about amateur radio supplying emergency communications for hospitals in the Pacific Northwest...

Not quite but very close. Note: One might also retain privilege in certain circumstances while an appeal to a denial of a renewal is outstanding. The decision to deny the renewal doesn't become final until the period to appeal it has expired, or the appeal (and its further recourse) is exhausted. [Or at least such is true with the licensing and other procedures of other federal agencies under the APA.]

Meaningless or not, it's still a bit confusing to tell who's
responding to who/what/why, etc.

I found the way...I find that when you first sign in and "repond"
to a post in Google, it shows the responded-to post. However if you
try to go directly to another repsonse, it won't do it.

I just hit the "sign out" link, then re-enter...A bit laborious,
but it allows others to see in what context I am responding. Even when
it's meaningless! =)

Of course not!

Personally, I wish we could have had it rebroadcast all over the
world.

That "We, The People" business was done all over again, and once
again we decided the leadership of the most powerful nation on Earth
without firing a single shot!

All the "shots' fired were of the verbal kind...the people were
allowed to decide for themsleves, and their opinions solicited in the
form of a ballot.

Many didn't get what they hoped for, but they will move on to the
NEXT election.

>
>Perhaps Len's interest in amateur radio is like my interest in
>professional football. I have no desire to play, but I like to watch.

There's more to that statement than you know, Dave.

IMHO, most people who watch professional football support it and enjoy it in
one way or another. For example, they buy tickets, paraphenalia, cheer on
"their team", etc. Even the person who simply sits at home and watches the game
on broadcast TV has some small effect, because they affect the ratings and the
ratings determine revenue. Etc. All without wanting to become players.

Of course, a lot of fans would love to actually play the game, but they just
don;t have the talent to do so.

But of course there are *some* people whose interest in football is negative.
Haven't you ever known someone who watched the games but complained the whole
way through, booing and yelling at the TV set, shouting out epithets and
wanting to fire the coaches every couple of plays? Sometimes the worst
offenders in this area are folks who once actually played the game, who will
tell you of their great accomplishments on the gridiron - over and over and
over, even if you don't ask them. Now they simply spectators who live in the
past.

--

One more game for the Eagles to win before....

There you have it. Len misses a couple of key phrases. I didn't write
of the "radio world", Leonard. I wrote "licensed radio amateurs" and

"amateur radio licenses".

> >That is
> >something you don't have. Ah, but I forgot--this is your week not to
> >desire such a license.
>
> Tsk. There is NO requirement for newsgroup access to possess
> an amateur radio license.

You're correct. Your posts here are proof of that.

> Tsk, tsk. There is NO requirement for access to the FCC requiring
> an amateur radio license in order to comment on amateur radio
> matters.

You've commented to the FCC.

> You make such fanciful imaginings, then pretend that whoever you
> are trying to impugn really does what you say.

Something like that, Leonard, old boy. I just imagine that you have no amateur radio license and *poof*, it comes to pass--you really have no amateur radio license.

> >> >Seriously? You don't enjoy tweaking people?
> >>

> Poor baby. Never made much money writing for money?

What does that have to do with your output? You'd think a professional writer would be embarrassed by some of the style and substance errors you make.

> Oh, that's RIGHT...you are an AMATEUR and don't desire to
> make money!

How you drift! I enjoy making money, Leonard. I don't make money for operating an amateur radio station. You're a former professional. You can't make any money operating an amateur radio station. You see, we have something in common. Do you have an amateur radio station?

> My apologies at forgetting your lofty, noble

No, I haven't.

> All you seem to be doing is being nasty to anyone who comments
> about anything in here. :-)

"Leo's" been commenting about "anything" in here recently. I'm not
"being nasty" to "Leo". Hans has commented about "anything" in here.
I'm not being nasty to Hans. Besides, you've admitted to "making
nasty". Aren't you being just a tad two-faced? :-) :-)

> >> The odd part of human nature is that the PCTA extras think that all

> >You're outdoing yourself. What panache! What skill!
>
> Ah, but the words are TRUE...and that makes you ANGRY.

Those words you wrote--they're true? Really? I'm angry? Really?
I'm awfully sorry, Len, they aren't true and I'm not angry.

> Well, word-wise, you are still an AMATEUR.

Word-wise? Do you consider yourself a PROFESSIONAL, word-wise? :-)

> >> This is NOT a "Chat Room" for idle gossip and cracker-barrel
> >> philosophy by a few regulars who have grown overly full of themselves.
> >
> >You're a regular, Len.
>
> I've been a regular Len since I was first named.

Oh, I don't believe that. There's something that sets you apart from
any other Len I've ever encountered. That aside, you ARE a regular here
and you seem full of yourself and there's seemingly no end to your
homespun views of the motivations of others.

> If my regularity isn't up to par, I just drop in here for some equivalent
> Ex-Lax. Does the job every time. :-)

Apparently, it does not. :-)

> >> Even though they think they own the place (and can therefore dictate

I don't get it, Len. Because Mike hasn't referred to you as other than "Len" or "Lennie", you suggest that he get "Yiddish for Dummies" and study it? You want him to call you Yiddish names?

Each posting in google has a "reply" button below it. Using this reply button doesn't quote text. Above in the header is a "show options" button. When I invoke the options, there is an identical "reply" button. This reply does quote text, but I don't always remember to go there first.

I believe Mike even apologized for it, having seen my use of it.

Unfortunately for Mike, Lennie never sees anyone doing "the right
thing". That way it always give him the "right" to claim victim
status.

And Lennie..For a guy who's always on other people's cases for
typos, I think you'd try harder to be more "undertanting". As for what
"putz" stands for, Lennie, I think it fits you like a glove...Or would
"like a condom" be a better analogy...?!?!

699. The Fed's Anti-Ham Trojan Horse

Newsgroup: rec.radio.amateur.policy
Date: 2005-01-21 14:25:22 UTC
From: Charles Brabham <n5pvl@sbcglobal.net>
Message-ID: <mh8Id.21814$iC4.11981@newssvr30.news.prodigy.com>
Source record: 102216

Something occurred to me recently that I thought I'd share... It has to do with the Feds, the ARRL, BPL and ARESCOM / WL2K.

Note how the ARRL was getting some traction early on with the BPL deal by taking a rational, scientific approach to the problem. Remember the video of Ed Hare driving around listening to BPL hash? Being above commercial concerns, amateur radio operators were in a good position to comment on technical matters with no taint of commercial motivation or greed. We spoke from an old, well-respected reputation.

Then things seemed to go wrong in a murky sort of way. - In the end, Ham Radio was dissed by the FCC as not being relevant enough to protect from BPL interference.

To me, this says that somebody within the federal government who wanted to boost BPL decided to pull a few strings and ham radio obligingly tripped over those strings.

I was thinking about how the federal government sometimes handles problems and wondered if the Department of Homeland Security grants may have been a successful "trojan horse" weapon that we are currently suffering the effects of.

It strikes me funny that all within a year or so, the feds (DHS) would throw millions of dollars at amateur radio through the DHS grants, and then the same feds (FCC) turn around and say our work is so irrelevant that it does not merit protection from inteference. To me, they are all "the feds" because of the heirarchy of command there.

With its deep pockets, it seems to me that the DHS grants handed out were a very cheap and effective way for the federal government to:

A: Eliminate the Amateur community's "detatched, objective" status by throwing money at the problem, depending on us to discredit ourselves by the way we react to the existence of that sudden influx of money.

B: Throw the ARRL and the amateur community into disarray, making the organized, concerted effort against BPL that was building much less likely to jell into something effective.

C: Produce a dependency upon the federal government that did not exist before, bringing new, long-lived federal control over our activities that previously did not exist.

We were starting to be a problem, so the federal government threw money at us. Soon we were tainted with greed, discredited, dependent, disorganized and fighting each other instead of BPL.

Cheap at any price, especially when you're spending somebody else's money to start with, eh?

Well, let's see.....

"Secret" tests replaced by VE system and published polls:
1983-1984, Reagan administration.

Element 3 split into 3A and 3B sections: 1987, Reagan Administration

"Medical" code test waivers created at the request of a foreign King:
1990, Papa Bush Administration.

Technician loses its code test: 1991, Papa Bush Administration

Restructuring closes off three of six license classes, reduces code
testing to 5 wpm and written testing: 2000, Clinton Administration

S25.5 code test requirement made optional: 2003, current Bush
administration.

Changes to license test requirements since current Bush administration:
None. (but we did get BPL)

...from the above

"When 99-412 goes into real restructuring in April, it
won't change some of those tenured old men of US
ham radio. They will be bitter, boastful, and express
contempt of newcomers, some of which will have the
exact same government-granted rank/status/privilege
as all those old men who claimed they "worked" for
theirs. Human nature doesn't change. Neither have
they."

Lenny my boy, all things 'ham radio' move like
maple syrup in Maine in February. This is as
much a constant of life issues as is Ohm's Law
and Income Taxes. I still hear hams on HF
outgassing about crap from 20 years ago as
if it happened yesterday. (This is known also as
the S.O.S.D.D. Principal - also common to other
"hobbies" like Model Trains, Golf, Equestrian
competitions and all-male Country Clubs)
What else can we say, it's human nature in all
of it's humorous facets. Always good for a
laugh. The Jerry Springer Show on the street
and in the waiting room.

Tell ja what.....save this post for 5 Years
and at that time, I'll bet you 6 dozen Dunkin Donuts
(and I'll buy!) that the same bunch of dirty old men are still
sending each other dirty nudie pics to each other
via Slo-Scan on HF and dumping a handfull of
pennies into the kitty at the club meeting then
taking 2 or 3 doughnuts and 2 refills of coffee.
(....assuming they put anything $$$ at all in the
kitty...the damm chain-smoking cheap bastards!)

Not the first time someone screwed up. Seems that weeks after
Voyager 2 was launched it was expecting messages from JPL.
Hearing nothing, it figured that its primary command
receiver was broken, and switched to a backup receiver.
Well, the problem was that the expected message was never
sent. There was a risk that if they allow Voyager to switch
back to the primary receiver the switch circuit might break
and then become completely deaf. Later the backup receiver's
automatic frequency control circuit fails (a filter loop cap
shorted to ground it seems).

But space probes are designed to still be able to work and
get at least some data back if some screwups happen.

Cross-posted to: rec.radio.amateur.policy,rec.autos.driving,co.general,boulder.general,rec.radio.amateur.equipment

Hello fellow motorists & ham radio operators.

Here is a piece of legislation that is of interest to both of our communities. It is House Bill 1045 that has been passed by the House Judiciary Committee as of yesterday (1/20).

The Definition of "Radar Jamming Device" is pretty broad.

Here is is below:

(2) FOR PURPOSES OF THIS SECTION, "RADAR JAMMING DEVICE"MEANS ANY ACTIVE OR PASSIVE DEVICE, INSTRUMENT, MECHANISM, OR EQUIPMENT THAT IS DESIGNED OR INTENDED TO INTERFERE WITH, DISRUPT, OR SCRAMBLE THE RADAR OR LASER THAT IS USED BY LAW ENFORCEMENT AGENCIES AND PEACE OFFICERS TO MEASURE THE SPEED OF MOTOR VEHICLES. "RADAR JAMMING DEVICE" INCLUDES BUT IS NOT LIMITED TO DEVICES COMMONLY REFERRED TO AS "JAMMERS" OR "SCRAMBLERS".

Passive device can be interpreted pretty broadly especially used in conjunction with the word "disrupt". A solid black car without its front tag could be a passive device that would jam laser signals as defined from part 2. How about a radar detector ? Usage of a radar detector would basically cause you to slow down and interfere with a LEO's chance to extract revenue from you since when he measures your speed, you are going the limit. Sounds far fetched ? Laws are known to be liberally (sic) interpreted in the gov't favor.

For the Ham Radio community. Think about, you are driving down the road, ragchewing with someone on the 2 meter. You happen to drive by a CSP speed trap or even better yet, Fairplay PD speed trap. The officer did not get a speed on you but notices the array of antennas on your vehicle. He decides to pull you over and do a little inquiry. As defined in section 3, your 2 meter rig is confiscated by the officer. Well, guess what, you get spend some money to get your rig back if you get it back. If you do, what kind of condition will it be in. They would have no incentive to take care of the property while in their "care".

Here is Section 3.

(3) RADAR JAMMING DEVICES ARE SUBJECT TO SEIZURE BY ANY PEACE OFFICER AND MAY BE CONFISCATED AND DESTROYED BY ORDER OF THE COURT IN WHICH A VIOLATION OF THIS SECTION IS CHARGED.

This is bad legislation.

Please contact your "representative" or senator at
http://www.leg.state.co.us

You missed the "...designed or intended to..." part. So your example of a black car without it's front tag is neither designed or intended to jam laser signals. It's just a car with it's front tag missing (which probably is illegal all by itself)

Additionally, a radar detector does not jam or scramble radar signals either...it only tells the occupant that there there. So that doesn't apply.

A HAM radio rig also does not fall into the category of "designed or intended" either. Even if it did scramble the radar signal, it's purpose is not "designed or intended" to do so, so doesn't fall into that category.

The code reads clearly to me. Hopefully the cop that is applying the law has better comprehension as to what the law says than you do!

Key phrase here is "EQUIPMENT THAT IS DESIGNED OR INTENDED TO INTERFERE
WITH, DISRUPT, OR SCRAMBLE"

None of your paranoid ramblings are "DESIGNED OR INTENDED", thus there is no
case.

Similarly, a 2M radio is not a jamming device and would not be confiscated.

Perhaps you need protection from one of these

To take the three questions in order...

1. Yes, I support the contention that the code test should be removed.

2. No, I do not believe that his method is effective. However, I also
basically believe that no other method would be any more effective
than his, which is one of the reasons why I'm mainly a lurker here and
rarely post.

3. No, I have not been swayed by his posts. In fact, I already
believed it was time to do away with code testing back in the
mid-1970's, which was twenty years before I ever discovered this
newsgroup and its various inhabitants.

Dan Rather's handler is the one that got the photo's and released them
to Al Jazeer. Once they broke the story, she ran them on CBS.

the best way to combat technology is with technology.

that's what's happened to radar and laser. Time for law enforcement to come up with new technology, not a new law.

that's what happens when the hunter gets captured by the game.

The problem with intent, is that it is an interpetation initially made on the spot by the officer. I am sure you'll be able to argue successfully in court at a cost in dollars and time that some device or some object or lack there of in/on your vehicle wasn't there with design or intent to defeat a police taxation device.

> Additionally, a radar detector does not jam or scramble radar signals
> either...it only tells the occupant that there there. So that doesn't
> apply.

Passive devices don't scramble or jam. A radar detector is a passive device. It listens, it does not broadcast. (if designed correctly) It's about how one interpets the legislation, which is the OP's point.

And yet we have all these cases where people who weren't drug dealers
lost the cash they were carrying because an officer felt it might be drug
money.

> Now THAT is funny!

Bad form I suppose, to reply to my own post, but this whole thing got me to thinking.

The ol' law of unintended consequences is catching up with the F.C.C.

The Janet Jackson "wardrobe malfunction" was certainly bad enough. That we should have been annoyed and disgusted is not an argument. There is a place for stuff like that, and it isn't a superbowl halftime show.

But in typical republicanesque overreaching fashion, the F.C.C. decided to overreach, just like in the early '90's.

They could have fined CBS a reasonable amount of money, which would have prompted them to be sure to clean up their act. Instead, they speak of fining every station that carries an offending signal, and threatening all manner of dire consequences on those who would scoff public decency. As well as fining CBS the better part of a megabuck.

The evil Howard Stern even gets his butt fired from Clear Channel.

While this may please some with how Tough we can get on these evil sinners, what is the consequence?

Howard now has a show on satellite radio. While his show has always been an unmitigated piece of crap, he is now under even less constraints.

Next, the draconian fines that may be levied on stations that carry obscene language or visuals is causing stations to be very cautious about what they carry. Cases in point are stations that would not air Saving Private Ryan. Whether you think that was a political stunt or not, the pervious time that the movie was shown, there *were* a lot of complaints about the language. What is a prudent company to do?

So now we have people making nasty little songs ridiculing the F.C.C.
on the internet, and there is talk of more television stations making
the switch to paid tv or pay per view instead of the old free tv paradigm.

Already, I find myself watching virtually *no* network television. I
watch the Simpsons on Fox, and that is about it for the networks. THe
only other TV I watch is on the History channel.

I get my news from Yahoo!, and if I'm not listening to NPR, I'm
listening to internet radio. Next step is satellite radio. I'm not the
only one either.

The unintended consequence? The F.C.C. is unintentionally providing a
powerful incentive for stations to move to venues that the F.C.C. does
not have jurisdiction over, and therefore failing to accomplish their
goal. They may clean up what is left of the "public" airways, but there
won't be many people listening.

TLOUC's in action!

I'll answer this one, but let me bow out of any more.

There just wasn't much reason to continue the discussions. Whereas I wanted some discussion about possibilities, a lot of what I got was in the form of how things that were being done on a regular basis -

couldn't be done.

So what do I do? An awful lot of people might get sarcastic and snide about it, but I prefer not to. Sometimes discretion is gritting your teeth and moving on.

If I launch a balloon, and it goes to 50 Kfeet, then I suppose it means I'm a failure, and if I report a 100Kfeet launch and successful retrieval, I guess I'm rubbing it in.

Obviously it was naivety for me to expect a response other than what I received, don't you agree? 8^)

I must confess to a weakness for the Chimay line. I was working at MIT offsite a few years back, and there was a wonderful restaurant in Cambrige Square - The Wurst House - where we would go for dinner often. We'd often split a bottle, one per two people. Unfortunately, the Wurst house is gone...8^(

Otherwise, I like a good wheat such as Franziskaner. A Kolsch is also enjoyed.

I haven't made a pale in a while, in fact the first one I did was an accident. I something like tripled the amount of hops in a brew I made. Almost threw the batch away after the first swig. By the time I was finished with the batch, I was a true believer in Hops!

I also brewed my first successful wheat beer this fall. I am pretty pleased with it. Light and a good bit of flavor at the same time. A partial mash.

If you ever do make it to Dayton, we should exchange a few bottles.

Nothing to interpret. A radar detector is not "designed or intended" to
"scramble" radar signals. Neither is a missing tag. The wording is as
clear as it can be. It seems to me that the problem here is not
"interpretation", but "comprehension".

>public decency. As well as fining CBS the better part of a megabuck.

As may have been mentioned before, the FCC does not have a "hook" on
a network or program provider, only on stations which are licensees
or are transmitting signals without a license.

The "CBS" which was hit by the forfeiture was the Owned and Operated
(O&O) stations. Failure to levy a penalty on the non-O&Os would give
rise to a defense claim of selective enforcement, which wouldn't
stand up but would stir up the pot and cost the Feds more than the
amount taken in as penalties. Some organizations would do that just
in spite.

Frankly, anything less than the big bucks penalties would be ignored
as the equivalent of a mosquito bite and/or paid out and ignored as
"the cost of doing business".

INTENDED TO INTERFERE WITH, DISRUPT, OR SCRAMBLE

One could argue the radar detector does interfere with police usage of
the device. Take out the words PASSIVE and INTERFERE WITH and the worries
go away.

My point being, umm, I dunno now. Oh yeah, missing a front license
plate isn't illegal in Alberta and Quebec.

Thus that nice reflective surface for the laser to work doesn't exist
for us.

Trouble is I've gotten stopped at checkpoints, at the same location
three consecutive nights while in British Columbia, just because I
didn't have a front license plate. They'd take one look while walking
to my vehicle and tell me to pull over while they checked my papers.

Oh, my, Professor Goddard, WHAT would you have the Euro space
folks DO?

Lend them a hand with your vast spacecraft experience! [even the
half-vast will do because you have so much of it]

Tsk. Did the Nun of the Above fail to read the latest IEEE
Spectrum? The one featuring the Gravity Probe B instrumentation
and successful on-going flight? They have the world's most
precision gyroscopes on board.

No? Aren't you a working professional in electronics engineering?
The SPECTRUM is the membership magazine of the IEEE, the
Institute for Electrical and Electronic Engineers. I read it free as
I am a Life Member of the IEEE (Life Members of IEEE don't have
to pay any dues or any one-time charges).

Well, then, you must not have seen the well-publicized pictures
of the Huygens. They were in the major newspapers.

>http://apnews.myway.com//article/20050120/D87O3NAO0.html
>"Nobody's Perfect!"

So, you "write off" yet-another spectacular space probe because
one part of it did not function correctly? Tsk. What do you have
to say of the TWO Mars Rovers still exploring the Martian surface?
I'd say that NASA is doing splendidly in the so-far-longest-delay
telecommand "radio control" of those two rovers. You don't say
squat.

Are you pissed that NASA doesn't use "CW" for radio comms?
Is that it?

Maybe you should instruct them to use a microphone in series with a transmitter lead line, like your idle, Reggie Fessenden. Gosh, what a clever method. Was that AM method adopted by anyone else for voice transmission? No? How could they fail to do so? Everyone else must be stupid, right? You tellum.

"Effective," e-schmective...

Da heavenly fodder hasn't come close to being effective in doing
anything but reinforcing his image of the prussian offizier busy
mouthing the party line of the Church of St. Hiram.

>3. No, I have not been swayed by his posts. In fact, I already
>believed it was time to do away with code testing back in the
>mid-1970's, which was twenty years before I ever discovered this
>newsgroup and its various inhabitants.

The same for me but a bit earlier....like two decades before.

Back when I volunteered for U.S. Army duty, I really believed
that "radio expertise" required morsemanship skills. Lucking
out in being assigned to a large Army HF communications
station - and finding out they did NOT use a bit of morse code
anywhere on HF - I learned better. [that was in the 1950s]

Perhaps an oddity, the OIC (Officer in Charge) of ADA trans-
mitters, Capt. William Boss (apt surname) was a ham and the
maintenance NCOIC had both radiotelephone and radiotelegraph
commercial operator licenses in addition to an amateur radio
license.

Oh, yes, such "isn't about ham radio, is it" as some say,
especially those who have never served their country in the
military or, if they did, never did any REAL communications
duty at a large HF station. [the Angle of Dearth is one of those]

War stories of military days seem to fall into two categories in
here: Fanciful, non-detailed braggadoccio or sea-going "radio
room adventures." Nothing wrong with the latter as far as I'm
concerned, but they seldom have 30+ high-power HF transmitters
working at the same time on a ship, not even on a carrier.

A half-dozen teleprinters in a large radio room with steel walls,
deck, and overhead do indeed make a racket as Jim Hampton
wrote. Wait until you get 200+ teleprinters working in a medium-
sized torn-tape relay room. Now, THAT is NOISE...and that is
how it was on the 2nd floor of the Chuo Kogyo Control for Army
station ADA...and ADA was only the 3rd largest Army station at
the time. :-)

That was a half century ago in my experience. Since then, I've
never encountered any civilian, commercial, or government/military
station that used or required morse code mode communications...
other than some amateurs and a few ships. A decade ago, the
major communications modes for ships was voice, by VHF or
SSB, or by data-teleprinter.

The pro-code-test-advocates (PCTA) seem to think that morseman-
ship is soooooo necessary that the FCC *must* test for it in order
to get a ham license for use below 30 MHz. Well, it may BE a
necessity...all those morsemen need to have playmates on their
little reserved slices of ham bands...their sandboxes aren't full yet
and more and more have signed off permanently. :-)

Last year I sat in on a "huge gun" multi-op CW DX contest station operation for a few hours and somewhat to my amazement all positions were using single-paddle Kent keys. I thought for years that iambic paddles ruled. Wrong. Which got me to thinking . . .

I've been using "iambic" paddles since around 1965 when I built one out of a pair of back-to-back J-38 type straight keys. After all these years it's finally dawning on me that I've never done much if any real "squeeze keying", I'm still using paddles like I usta use bugs. So I plan to equip myself with a single paddle "electric bug" and give it a whirl.

Begs a question in my mind . . is real iambic squeeze keying actually more like mythology than it is fact? Have we been behaving like sheep or is it just us old farts who cut our teeth on bugs . . ?

NO WAIT! You don't understand at all! All the time I made threats was all bullCrap! I made threats because my love was not being returned!

Listen please.....just for this time,OK?

The sex with Frank was only for fun, thats all. You can ask Frank.We both just wanted to have some fun.....no love, just fucking. We both feel that way. Landshark and Twistie have their thing going.....they asked ME to join in. It was just fucking and nothing more.I will give them all up for you! Listen to me!! I LOVE YOU!!!!!!!!!!!

I promise this. if you would just return my love I will change!Doug, I know you're straight. But PLEASE LISTEN!!!!!

I LOVE YOU AND ONLY YOU!

I will change, I promise! I'll get my license. You and me can talk on 2 meters together. We'll laugh at twistie and the rest of them. I WILL STOP THE KEYCLOWN GAMES!

We can talk on the repeaters and simplex together.I even rat out auctions! I WILL DO ANYTHING TO BE WITH YOU!!!!!!!!!!!!!!!!!!!!

Chimay is something special. I don't know how they came upon the "Red, White, and Blue" theme, but I like that too. For some reason I've retained about two cases of bottles in my garage for refill, but I'm not sure that I'll cork them. I believe that I can get a special european bottle cap that will fit them,

> Otherwise, I like a good wheat such as Franziskaner. A Kolsch is

> finished with the batch, I was a true believer in Hops!

When I stick to noble hops and don't add them too late, i.e., after the last 15 minutes of the boil in my opinion, I can handle a lot of bitterness. I just get tired of all the overhopped, green grassy-tasting, APAs.

> I also brewed my first successful wheat beer this fall. I am pretty
> pleased with it. Light and a good bit of flavor at the same time. A
> partial mash.

Wheats and pales are my favorites, and wheats really hit the spot after cutting the grass. I've concentrated on wine making over the last 1.5 years, and my beer selection is non-existant. My son and I brewed up some "stone ale" with everything we had left over. It's still in the carboys.

> If you ever do make it to Dayton, we should exchange a few bottles.
>

> - Mike KB3EIA -

I'd like that.

Since moving to Ohio, I always have to play Dayton by ear. It always lands in my first spraying contract. I managed to get that weekend off last year because of a lack of overtime money. But then it coincided with a Scout campout. For me, April made it easier to get to.

Hey, if you want to bring me up to speed on your balloon project, drop me a note to my real email acount, myfirstandlastname@juno.com.

Isn't this just another post in his continuing campaign toward removal
of the morse code test in amateur radio? I thought it a fine example of
Leonard's method of civil debate.

There's a chance, though, that this marks a new direction for Len. It
could be that he has decided to change his methods. This may mark a
turning point in his efforts. It might be a first effort toward that
end.
The final result indicates that he is having a few problems in the
implementation.

Ah interesting on the single paddle ops at the big contest station. Quite the opposite in several contest stations here.

Some comments on Iambic keying.

Iambic ops claim "Overall, single lever paddles take more mechanical motion to send characters than an iambic paddle."

"Expert ops can send continuously without leaving their fingers off the paddles, so perhaps it is best described as a touch-squeeze keying technique."

Be aware there are two different modes of Iambic operation - type A and type B. When a squeeze is released during an element (dot or dash), type "B" adds the opposite element. Type "A" just finishes the element in progress and does not produce a following alternate element. For example, in Type "A" Iambic, a squeeze release during the "dah" in the letter A will produce "dit dah" (A). In Type "B" Iambic, a squeeze release during the "dah" in the letter A will produce "dit dah dit" (R). That is if the left paddle is still depressed at the half-way point of the dah.

My buddy - a top contester sez "So Iambic takes delicate practice, but after a while the finger-brain activity becomes second nature and it will be as easy as single paddle or straight key sending, but a lot less tiring and it is probably the fastest keying method."

I am a single paddle guy, so can't attest to the Iambic preference. but I am not a top contester (;-)

For those interested in where Iambic came from, here is the best opinions.

Iamb dates back to ancient Greek poetry. Iamb is a term from literature meaning a two-syllable rhythm. An "iamb" consists of two syllables. It may be two separate words, one word with two syllables, or even a portion of a multi-syllable word. But the important thing is that each of the two syllables has a different "accent." Sometimes the accent is called a SHORT/LONG. That means, the first word comes quickly off the mouth when spoken; the second word actually sounds for a longer time. So somewhere along the line someone dubbed the squeeze key method of sending Morse characters as Iambic, perhaps because of the short/long (dit/dah) aspect.

I would find Swaggart much more preferable than the dumbbell commissioner Kathleen Q. Abernathy. The first requirement for FCC chief should be NO law degree. Some brains and some technical comprehension would be a plus.

When you ask questions, is it trolling or "making nasty"? You've
already admitted to deliberately "making nasty", haven't you?

I'm polling, not trolling.

He said he hadn't been swayed by your posts, Len. Did you treat him to the several paragraphs of blather for a reason?

John has posted here quite a number of times so he hardly counts as a lurker. He has previously made his views on morse testing known. If we discount him, we're left with an army of.....hmmmm...precisely.....uh... no lurkers who have spoken up to say that they support your methods or that they've been swayed by your posts. If we do decide to count John, he states that he does not support your methods and that he has not been swayed by your posts.

The lack of response from lurkers seems to indicate that there are not an many people reading and not commenting as you believe.

Seems the Cassini probe has landed on Titan and found it covered
in liquid methane...

Three billion bucks to go find what Lennie's wife has lived with
for who-knows-how-long...???

Lennie's been covered in it for years! Usually has to wipe some
off before his wife will kiss him goodnight Only on Earth we call it
flatulance!

If a Titanian ever comes to Earth and runs out of "air", we can
always send him to Lennie's house! Lotsa free methane floating around
there, no doubt!

>> Now THAT is funny!

I thought so. ~30 years ago, he did a song called "They Won't Play This Song On
The Radio" (or something close to that) which sounds like it's about to go over
the edge, but never does.

>Bad form I suppose, to reply to my own post, but this whole thing got
>me to thinking.

Not bad form at all if it got you thinking. Which was my intent.

>The ol' law of unintended consequences is catching up with the F.C.C.

Maybe.

Remember that the key features of this administration are short-term,
simplistic thinking and red-herring, hot-button issues.

>The Janet Jackson "wardrobe malfunction" was certainly bad enough. That
>we should have been annoyed and disgusted is not an argument. There is a
>place for stuff like that, and it isn't a superbowl halftime show.

Agreed.

I think what was most offensive about that whole thing was not what was
actually shown, but rather that it was shown without any warning, at a time
when it was completely unexpected.

That's why I included the warning when I posted the link, above.

>But in typical republicanesque overreaching fashion, the F.C.C. decided
>to overreach, just like in the early '90's.

>They could have fined CBS a reasonable amount of money, which would
>have prompted them to be sure to clean up their act. Instead, they speak
>of fining every station that carries an offending signal, and
>threatening all manner of dire consequences on those who would scoff
>public decency. As well as fining CBS the better part of a megabuck.

Phil Kane, K2ASP, has spoken to that issue, and I defer to his expertise on the issue.

>The evil Howard Stern even gets his butt fired from Clear Channel.

Howard is a different issue.

First off, there's nothing on his show that you don't also hear on Oprah, Springer, Dr. Phil, Dr. Laura, or any of those sorts of shows. The main difference is that HS is a target and they're not.

>While this may please some with how Tough we can get on these evil
>sinners, what is the consequence?
>
>Howard now has a show on satellite radio. While his show has always
>been an unmitigated piece of crap, he is now under even less constraints.

Whatever you think of HS, you have to give him credit for certain things:

1) He gets incredible ratings wherever he is on the air.

2) He revolutionized morning "adult rock" drivetime radio. I know this firsthand, because Philadelphia was one of the very first cities his show was syndicated to.

Before HS, morning "adult rock" drivetime radio followed a very strict formula in almost all markets. The "morning zoo" formula had some sort of DJ, with maybe a sidekick or two. They would play records and canned comedy bits, then break for news, sports, weather, traffic and commercials. The content was always local and the talent varied all over the map.

An unshakeable article of the formula was that morning drivetime radio had to be locally generated. When HS first came to Philly 20+ years ago, the "[rpfessionals in radio" said he was doomed to failure because Philadelphians would not listen to a New York-based station. Worse, HS did not follow the formula at all. Yet he quickly took near-top place in the ratings, second only to the all-news/traffic/weather/sports station. Philadelphians simply punch one button to get the traffic or whatever from KYW, then back to HS for "entertainment".

3) He branched out into other media venues, which was unheard of before HS.

4) HS has held up to the light what really makes the broadcast media tick. It's all about ratings, because ratings drive advertising revenue. At the same time he drives production cost *down* because it's cheaper for local stations to buy his show than to produce their own.

Ironically, his success is due to strict adherence to "republican" values of a free market and competition. His defense has always come down to a single

point: Millions of people *choose to* listen to him, yet only a few complain.

Now HS will move to satellite radio, and take tens of millions of people with him.

>Next, the draconian fines that may be levied on stations that carry
>obscene language or visuals is causing stations to be very cautious
>about what they carry. Cases in point are stations that would not air
>Saving Private Ryan. Whether you think that was a political stunt or
>not, the pervious time that the movie was shown, there *were* a lot of
>complaints about the language. What is a prudent company to do?

Yep. Note the peculiarly American fixation on language and sex as objectionable, but not violence.

>So now we have people making nasty little songs ridiculing the F.C.C.
>on the internet, and there is talk of more television stations making
>the switch to paid tv or pay per view instead of the old free tv paradigm.

But is the song really "nasty"?
>
>Already, I find myself watching virtually *no* network television. I
>watch the Simpsons on Fox, and that is about it for the networks. THe
>only other TV I watch is on the History channel.

The Simpsons is pure genius, probably the best show on TV in a generation. That it survives on Fox is even more ironic.

>I get my news from Yahoo!, and if I'm not listening to NPR, I'm
>listening to internet radio. Next step is satellite radio. I'm not the
>only one either.

Exactly.

>The unintended consequence? The F.C.C. is unintentionally providing a
>powerful incentive for stations to move to venues that the F.C.C. does
>not have jurisdiction over, and therefore failing to accomplish their
>goal. They may clean up what is left of the "public" airways, but there
>won't be many people listening.

Perhaps that's the goal!

Consider what has happened to broadcasting in general in the past couple of decades. AM BC radio, once king, is now a backwater compared to FM BC radio. Deregulation has homogenized both of them. Neither is a big moneymaker nor job-creator, because the markets are saturated and there's a limit to advertising revenue. The receiver technology is mature and there are no ongoing user fees. BC TV is in a similar state, compounded by the limping move to HDTV.

Into this mess comes satellite radio, internet and cable TV, BPL, etc. All promise lots of new jobs and revenue sources. Plus the FCC doesn't have the headaches of trying to regulate them.

Some folks are cheering that Mr. Powell is leaving FCC, but ya gotta wonder who will replace him.

This guy is a real piece of work. He has a Collins 30L-1 linear amp on ebay. In the description he states: "The amplifier is in fully operational condition, the tubes all test good, I did replace one tube to obtain full rated output and made sure the tubes were neutralized."

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5745848993

I emailed him to ask just how this was accomplishes as triode tubes in grounded grid operation do not require any neturalization and there is no procedure in the 30L-1 manual to neturalize the amp.

His reply was: "I was doing an FT-101 at the same time, yes I know you cannot neutralize a Linear.. my typo"

Yea right. The guy throws in all kinds of hype about how he has owned and used something for years when it is something he recently purchased on ebay, how he has done complete alignments, ect., ect. ect. I doubt the guy even knows what doing an alignment is.

"yes I know you cannot neutralize a Linear.."

Wonder what he thinks is in the final stage of that FT-101 if it isn't a linear amp, and if you cannot neutralize a linear then why is he neutralizing the final linear amp in the FT-101?

No, someone who actually understands the physics of radio
could never run the Funny Cookie Corporation. You need
someone who writes screwball regulations like "A radio
station will not be allowed to own the translator
(repeater) it uses to get heard in another area".
Why would that matter?

'Cause I'm a big time crimimal, you moron. Studies have found that people
tend to go the best speed for the road they're on anyway, there don't even
need to be speed limits. Speed limits are a totalitarian way of raking in
bucks by fleecing people.

I don't think you appreciate the psychology of the situation. Try this
experiment; Take a plain, white piece of 8 1/2" by 11" printer paper.
Using a black magic marker, make a dot about the size of a dime on one
side of the paper. Now, show the paper to several people and ask them
what the first thing is that they notice. The majority of them will
say that the first thing they notice is the black dot.
That dot only covers roughly one half of one percent of the total
surface area of the paper, yet most people notice the blemish first.
They seldom notice that the rest of the paper is untouched.

So it is with ham radio. Outsiders see the blemishes on 75 and 20
meters, yet they don't see that the vast majority of other aspects are
untouched. First impressions mean a lot, and ratios of good-to-bad
operators are meaningless in this respect.

Still posting gay shit to the radio groups, while forging me, Doug. You
really are scum.

Now answer the questions:

1. How is the court ordered shrink working out for you?

2. How's the court ordered job hunt going?

3. How's the court ordered wage withholding going?

4. Have you made the rain report for jamming repeaters again, Doug?

5. Have you threatened to kick anyone elses ass, only to have them show
up at your section 8 slum and prove what a fucking coward you are, maggot?

http://n8wwm.4t.com/

Go lay down by your bowl, dogie.

Please...do not correct a PCTA extra. That is a no-no in here.

The European Space Agency project is being well-publicized in
all major newspapers and a great deal of information (in detail)
on it available at NASA websites.

An excellent PDF file about an on-going Terran environment
experiment is Gravity Probe B designed to examine part of
Albert Einstein's General Relativity Theory. Considerable
information is found at http://einstein.stanford.edu

At the bottom of that home page on "GP-B" is a link to a 1.6 MB
PDF which explains the mission in clear, concise terms with
excellent graphics. Look for the link to "Gravity Probe B
Companion." For those who have gone beyond the auto mechanic
school of radio operation, the links at the top left of the site marked
"engineering" describe the processes of making the world's
roundest spheres (for the precision gyroscopes) and the cement-
mixer-sized 4-layer Dewar flask that keeps the science package
at 1.8 degrees Kelvin.

As to the alleged claim about LIQUID methane in my personal
environment, that is quite wrong. The liquid form of methane can
only exist at temperatures rather well below the coldest found on
Earth. The "critic" seems familiar only with the GASEOUS form
of methane. [may the aldehydes be with him...] To use a
colloquial term, that critic is "a gas." Peee-uuuu. :-)

Yep,

And if the sonuvabitch confiscates equipment that happens to be purchased with DOD funds and assigned to me as part of an agency I am involved in, then I will merely contact USAF CID and make that hick cop think his a$$ was fried to a crisp by the time they get thru with him! Most of these cops think "Ah'm th' law 'roun' h'yar, boy,and what ah says goes. So you just hand over that CB reddio thar before I slap you in jail thar, you heah, boy?"

As to seizing Amateur or other radio equipment I am licensed to use, I would use the existing laws to not only
retrieve the equipment, but sue to recover ALL monies/expenses incurred in the act--probably causing the stupid cop to lose his job. And to quote a famous Warner Bros cartoon, "He don' know me vewwy well, do he!". LOL!

I sue the state and the cop if it were the last thing I ever did!!! Hang the expense--which I believe I would recover anyway. Hey, I am retired and can expend whatever time it takes! GRRRRRRRRR!

Fox network and Fox news seem to act almost like two different entities.
The Network seems to put on shows that offend the more priggish among
us, and the News group seems to attract them.

I'm sure that the other networks would be very happy for Fox to drop
the Simpsons. Probably start a bidding war to pick them up.

That is what happens when you broadcast garbage. In our area, we have
three main stations. One does carry ESPN sports, and I'll listen to Jim
Rome occasionally and Steelers games. The other two carry the EXACT same
programming, with gems like Savage Nation and some weird screechy lady
at night who is too creepy for me to stay on frequency to find out who
she is. Not too many local businesses advertise on that one, as it seems
most of the commercials are Canadian! I kid you not!

If you want to hear some of Michael Savage's compassionate conservatism,
go to:

http://tinyurl.com/5ywcw

and check out the Michael Savage, Tsunami no tragedy clip.

FM around here is not a lot better

The first requirement for FCC chief should be NO law
> degree.

>>>>>>Some brains and some technical comprehension would be a plus.<<<<<<<

I think you have hit the nail on the head here.
The FCC commissioners are all WASH DC political hacks. LOTS of
"connections", but NO TECHNICAL experience.

IF you're going to write regulations for a very technical subject area, you
have to have the technical expertise and ability to understand what the
consequences of your rules and regulations are. Technical competence, NOT
the fact that you were a legislative assistant to a senator from North
Dakota, or on the board of zoning appeals, will make you effective.
Otherwise, you will be BS'ed by lobbyists that have an axe to grind, and you
will make poor regulatory decisions with poor outcomes, because you can't
forsee the unexpected consequences of you new regulations.

Abernathy is NOT stupid.
She is just a technically illiterate lawyer.
She doesn't understand RF,propagation or antenna theory, consequently, BPL
which is touted to bring the internet to the rural masses, sounds wonderful.

I should be the next FCC commisioner.

| Even Novices and No-Code Techs know to turn the radio on!

Yes, but the radio isn't usually millions of miles away by the time
they notice it's not on ...

In any event, this sort of thing happens closer to Earth too. Many
R/C gliders have been lost because somebody put them n the winch
(basically a motorized bungee) and launched the plane without ever
turning on the receiver in the plane. What happens next generally
depends on how well the plane was trimmed and how stable it is --
ranging from flying off never to be seen again to making a lawn dart
out of itself ...

And I'll bet some ham has put a transponder or repeater or something
onto a balloon and launched it, forgetting to turn the stuff on first :)

No, but we she does/has done is worse. Her show basically consists of
her lecturing people about how they have to adopt her values in order
for their lives to work.

What I find interesting about "Dr." Laura is that she doesn't/hasn't lived
up to the very values she preaches to others. For example, she insists
on being called "Doctor" - but she's not an MD, Psy. D or even Ed.D.
She's got a Ph.D, but not in human psychology or therapy.

Lots of other examples.

>>>While this may please some with how Tough we can get on these evil
>>>sinners, what is the consequence?

>>>Howard now has a show on satellite radio. While his show has always

>most of the commercials are Canadian! I kid you not!

Weird!

But I'm mostly used to major markets. Here in Philly, AM was king when I was a kid, right up into the '70s. FM existed all the way back to the early '50s, but was the province of classical, educational and other special-interest radio.

Then progressive stations began to show up on FM, and shatter the Top 40 AM formula to bits. They played entire album sides, cutting-edge comedy like Firesign Theatre, had live interviews and even performances. (Somewhere I have a reel-to-reel tape of Jackson Browne, when he was almost unknown, performing live at the Main Point in Bryn Mawr - recorded from an FM station about 1971).

Both the technical quality and the programming quality of FM in those days pulled a lot of people away from AM.

I see where you are going. I don't quite equate the two things as equal, but agree that the show and here are something else. Some of what she says is correct, but her delivery and sanctimony make you achingly want to disagree with her always.

Heh, sounds like a friend of ours!

I asked a colleague who is a psychologist about Dr Laura, and what he thought of that sort of thing. He replied "A good rule of thumb is that if a person is called "Dr and their first name" they probably aren't the best person to listen to. Dr. Laura, Dr. Phil, Dr. Nick...

The woman has a checkered past for sure, by here present standards, she also appears to have occasional "episodes", after which she feels the need to get a little more shrill in her approach.

The strange thing is that she has not learned the lesson that you can improve your morals and values, but *you* have to do it, and someone virtually screaming at you probably *won't* get you to do it. Oddly enough, the early Dr. Laura probably knew that already

Now you have me reminiscing. WRSC FM in the late 60's, early 70's was a
State College sation that was very progressive. They did the albums,
theme nights, and real music all the time. I tuned in to this as a
freshman in high school, and was hooked immediately. While my classmates
were listening to the Grass Roots, 1910 Fruitgum Company, and Gary

Puckett and the Union Gap, I was doing Hendrix, Led Zappelin, Cream and
other non teeny stuff.

I couldn't agree more. With all of it. This NG has been around for well over 10 years and it is what it is and always has been, an online harpoon target range and you oughta known what was gonna happen. Any post anybody tosses out around here is an invitation to get skewered for jollies - or for serious in occasional instances. Your nice guyism has been duly noted but don't expect reciprosity when you toss out an absoutely irresistable target like your balloon thing. Then comes the post-facto petulism problem but never mind . .

>"connections", but NO TECHNICAL experience.

Technical experience by itself isn't necessary if the Commissioner(s) has/have an Engineering Assistant whose job is to absorb the technical stuff and lay it out in a manner that the Commissioner can understand and act on.

The good Commissioners have all had such folks on their staff. None of the current ones do, although I could be wrong in regard to Commissioners Copps and Adelstein, the only two with brains.

Several decades ago a former colleague of mine started a movement to get the Communications Act changed to mandate that at least one Commissioner have a degree in engineering or physics or be a Registered Professional Engineer. Although most of the engineers supported that, it went absolutely nowhere.

The last "engineer" Commissioner was George Sterling in the late 1940s. During WW-II he had headed up the Radio Intelligence Division which chased German and Japanese spies using radio. He was also the last Commissioner who was a licensed ham during his time at the agency.

Common sense and a good grasp of what communication regulation should be is what is really needed. Rubber stamps can be obtained at any office supply store.

Two more electron's worth....

One of the best, if not THE best Chairman that the FCC had was
Dick Wiley (Nixon appointee-mid 1970s) who was a top-notch lawyer
before coming to the Commission. He had an engineering assistant
to whom he could turn to explain the issues, and Dick was sharp
enough to listen and understand what he was being told.

I got to brief him about a special project involving TV technical
standards for which I was heading up the field measurements and
analysis portion, and from his many questions he seemed to understand
what was going on the first time.

After his term was over, he went back to his old law firm (Wiley,
Rein, and Fielding) where he still is.

I wish we could get him back. He would have made short shrift of
the BPL business.

Rumors in the industry come up with a name of a Texas state
regulator, that person being eons worse than Mister Michael.

There are two sitting Commissioners either of whom would make an
excellent Chairman, but being Democrats they don't have a chance of
a snowball in hell.

The other two sitting Commissioners would scare me were either of
them installed as Chairman. It's not because they are Republicans -
two of the best Chairmen in my memory were Republicans. It's because
they scare me....

My two electron's worth, based on serving under about ten different
Chairmen and meeting half of them in person.

It is in Physiology. We in the ba.broadcast group usually refer to
her as "the Quactor".

Pennsylvania, the fifth most populous state in the U.S. is another
one-tag state so a PA driver is in "trouble" when he passes thru CO??
That's the point.

Beyond that assume some ham with a vehicle that looks like a porcupine
or a mobile antenna farm gets pulled over in CO and the cop sees a heap
of frederally licensed radios in the vehicle and confiscates the whole
pile on the spot thru sheer technical ignorance on his part.
Remind me to stay the hell outta CO . .

Some of it might involve the demographics of that particular crew, it's
a bunch of geezers.

> Some comments on Iambic keying.
>
> Iambic ops claim "Overall, single lever paddles take more mechanical
motion
> to send characters than an iambic paddle."

But only if the user actually using iambic keying with a twin-paddle
key. Which I don't think I'm doing. It's all deeply buried unconcoius
reflexes, it just "happens". Looney!

> "Expert ops can send continuously without leaving their fingers off

I was aware of all of all this four decades ago. Problem is that
there's a huge difference between "being aware of" and actually digging
into it and learning how to do it. Which I never much bothered with
then and haven't even thought about until very recently.

Ball = Dropped. Thanks for the details on Modes A & B, they'll help.

> My buddy - a top contester sez "So Iambic takes delicate practice,
but after
> a while the finger-brain activity becomes second nature and it will
be as
> easy as single paddle or straight key sending, but a lot less tiring
and it
> is probably the fastest keying method."

Manual keying during contests is rapidly becoming an anachronism given the current crop of computer logging programs. Virtually all of the CW transmitted by the serious contesters during the contests is coming out of their programmed keyboard function keys. Even worse, depending on yer perspective, the current thrust is toward getting away from having to remember what function key transmits what and just mousing & clicking on the required line of text on the tube. No J-38s, no bugs, no paddles, no nuttin', just the mouse . . how tiring is THAT?? Maybe paddles are another piece which have seen their day and are on their way onto the collector's shelves as far as CW contesting goes.

> I am a single paddle guy, so can't attest to the Iambic preference.
but I am

Right outta ninth grade poerty class, iambic pentameter and all that . . Di DAH, di DAH, di DAH . .

. . humpf . . ! Heh . . .

At this late date I'm compelled to go back and review the way my fingers are creating the dots n' dashes which crawl up the coax and out

to into the ether. Give modes A & B a fair, hard look forty years late,
try a single lever paddle on the air where it really matters, etc.
Worthwile winter project.

> Cream and other non teeny stuff.

In my time it was WMMR, but the same basic story.

Point is, over time the experimental/progressive elements disappeared
and were replaced by a formula. Homogenized just like Top 40 radio was.

Academia is full of folks who insist upon being called "doctor," and
I'm not talking about medical schools. Jim doesn't seem to mind it.

As far as her moral values, perhaps she discovered them later in life
than did our precious N2EY. I guess God doesn't allow for mistakes or
late learners.

You think so? I don't. I'm guessing that their data moves via phone lines. If the phone lines aren't there, it'll move when there are phone lines. That's like what happens in my local grocery from time to time. The phone lines are down and the store can't sell West Virginia lottery tickets. People are told to come back later when the line is up.

> > All cellular phones interface to wire lines at some point.

> My wired phones worked just fine during the Christmas ice storm. The

I can understand your confusion, Brian. The power lines carry electricity. The telephone lines carry telephone conversations. The gas lines carry natural gas. Did you have any further questions?

Of course! Just in case you didn't see the "letter to Dr. Laura, I'll post it here:

Dear Dr. Laura,

Thank you for doing so much to educate people regarding God's law. I have learned a great deal from you, and I try to share that knowledge with as many people as I can. When someone tries to defend the homosexual lifestyle, for example, I simply remind him that Leviticus 18:22 clearly states it to be an abomination. End of debate. I do need some advice from you, however, regarding some of the specific laws and how to best follow them.

When I burn a bull on the altar as a sacrifice, I know it creates a pleasing odor for the Lord (Lev. 1:9). The problem is my neighbors. They claim the odor is not pleasing to them. How should I deal with this?

I would like to sell my daughter into slavery, as it suggests in Exodus 21:7. In this day and age, what do you think would be a fair price for her?

I know that I am allowed no contact with a woman while she is in her period of menstrual uncleanliness (Lev. 15:19-24). The problem is, how do I tell? I have tried asking, but most women take offense.

Lev. 25:44 states that I may buy slaves from the nations that are around us. A friend of mine claims that this applies to Mexicans but not Canadians. Can you clarify?

I have a neighbor who insists on working on the Sabbath. Exodus 35:2 clearly states he should be put to death. Am I morally obligated to kill him myself?

A friend of mine feels that even though eating shellfish is an abomination (Lev. 10:10), it is a lesser abomination than homosexuality. I don't agree. Can you settle this?

Lev. 20:20 states that I may not approach the altar of God if I have a defect in my sight. I have to admit that I wear reading glasses. Does my vision have to be 20/20, or is there some wiggle room here?

I know you have studied these things extensively, so I am confident you can help. Thank you again for reminding us that God's word is eternal and unchanging.

Hey! Why can't we own Canadians? ;^)

You left out an important part, Jim. Let us take AM for example. It is now the purveyor of Cranky talk radio. While the people who want to listen to that sort of thing are simply wild about their shows, most people are not. So while the marketing drove itself in the new direction, a lot of people simply stopped tuning in at all. Less listeners. Bad idea to turn off half of your listener base, but there you go!

It is the same thing as the reality based TV show craze. That was the final straw in my shift away from network TV. Those who like REality shows just LOVE them. Many of the rest of us find it odd that people would want to sit around and watch shows glorifying "average".

But now even these shows are wearing thin. The trend of less people watching network TV will probably accelerate.

Hey, I have an idea! How about some quality programming? Put on a few science shows. Maybe some shows glorifying real heroes instead of crack smoking entertainers. Don't show the same ten movies over and over again - how many times do we need to see Kindergarten Cop, She-Devil, or Dirty Dancing? Those movies are often on multiple channels at the same time on any given weekend. My XYL is content to watch Dirty dancing over and over, but I think she has a thing for Patrick Swayze. 8^)

The audience is there, all they have to do is attract them with dome decent programming.

Remember the "21st Century" show with Walter Cronkite? That commercial with putting the baby chick in the insulating container, then dropping it into the boiling water, after which it was retrieved unharmed, entranced me as a child.

>>>>>Into this mess comes satellite radio, internet and cable TV, BPL,

I suggest moving. My neighbors never object to the aroma of barbecued
beef, grilled over an open fire, fueled with hickory.

> Hey! Why can't we own Canadians? ;^)

They are on the endangered species list and are in short supply. There
is, on the other hand, a surplus of Mexicans.

> When a person wants to have strong unshakable conviction, it is very
> important that they don't know a lot about the subject.

There is a strong temptation to take this back into the morse code test
wars.

> >>>>>Deregulation has homogenized both of them. Neither is a big
> >>>>>moneymaker nor job-creator, because the markets are saturated and
> >>>>>there's a limit to advertising revenue. The receiver technology is

AM broadcast radio is basically a wasteland. Spinning the dial in the
daytime from here shows wall-to-wall talk except for low powered station
in the Wheeling-Steubenville area which plays easy listening hits of the
'40s through the '70s. It can be heard here during the day but not at
night. The nights reveal a few music stations, including one in Canada.
Our local Clear Channel powerhouse, WWVA (which runs talk radio during
the day) sells its time to fundamentalist preachers except for Saturdays
when it airs the Jamboree.

I quit limping as regards HDTV last year. I went for it full bore. Neither of the two local TV stations is using enough power to reach me and I'm only 25-40 miles away. They aren't yet transmitting HDTV, just digital TV. Remember that I'm at a little over 1500 foot though. I installed a new TV antenna and modest preamp and use quality RG-6 coaxial cable. I receive Pittsburgh CBS, ABC and Fox affiliate HDTV along with PBS HDTV from Cambridge, Ohio and Morgantown, WV. I get sporadic HDTV signal from the Pittsburgh NBC affiliate. When it ups its power, I'll have the major networks covered. The received picture is phenomenal.

> You left out an important part, Jim. Let us take AM for example. It is
> now the purveyor of Cranky talk radio. While the people who want to

I like Glenn Beck, who mixes conservative talk with humor. I sometimes listen to Rush or to Hannity to balance the left-leaning stuff from NPR.

> So while the marketing drove itself in the new
> direction, a lot of people simply stopped tuning in at all. Less
> listeners. Bad idea to turn off half of your listener base, but there

There's room for both music and talk on AM and FM The AM band is much better for cross country driving. Yeah, I know, there's always satellite radio. I'm not paying to listen to the radio in my car.

> It is the same thing as the reality based TV show craze. That was the
> final straw in my shift away from network TV. Those who like REality
> shows just LOVE them.

I find little of reality in them but much of stupidity. We find that we watch perhaps four shows from the big three networks. We have Dish Network here though if they keep jacking the prices, I'll investigate their rival or scale back.

> Many of the rest of us find it odd that people
> would want to sit around and watch shows glorifying "average".

You'll remember my line as used concerning amateur radio testing, "Strive to be mediocre!"

> But now even these shows are wearing thin. The trend of less people
> watching network TV will probably accelerate.

There's always a market for good drama, good comedy, good music and good discussion. The trouble is, it is a small market.

> Hey, I have an idea! How about some quality programming? Put on a few
> science shows. Maybe some shows glorifying real heroes instead of crack

There ya have it but who's going to watch it.

> The audience is there, all they have to do is attract them with dome
> decent programming.

I don't think the audience is there in large enough numbers, Mike.

> Remember the "21st Century" show with Walter Cronkite? That commercial
> with putting the baby chick in the insulating container, then dropping

> entranced me as a child.

I'm old enough to remember "Omnibus" and "Wide, Wide World". I was enthralled with "Watch Mr. Wizard"--enough to whine my parents into getting me two of Don Herbert's science experiment books.

There's some quality television available today though. Philadelphia vs. Atlanta and Pittsburgh beating the Patriots for the second time.

Bwaahaahaa! Good one!

The sad part is that many of her listeners think she really is qualified.

I think there was an episode of "Frasier" where he has to deal with a quack radio "doctor", who asks him to write the foreword in her new book.

Not when you know that wired phone systems and designs are so old fashioned
that they get their power through the telephone line itself rather than the
power distribution grid and that many of the phone companies still have
their emergency generators to supply power when the power grid does go down.

>>Jeff KH6O

>I don't think you appreciate the psychology of the situation.

Oh, I do. You said "nobody seems to care" which would indicate that
100% of the amateur community and the FCC have turned their backs to
our problems; that is completely false. Recall your logic 101 class:
To prove that "nobody cares" is false, it only takes one person who
does care -- that fact that you do care invalidates your own claim!

> Try this
>experiment; Take a plain, white piece of 8 1/2" by 11" printer paper.
>Using a black magic marker, make a dot about the size of a dime on one
>side of the paper. Now, show the paper to several people and ask them
>what the first thing is that they notice. The majority of them will...

Your experiment coincides with my statement that if you so much as
sneeze on HF, half the world could possibly hear you. The riff-raff
are a tiny fraction of the amateur community, yet their bad behavior
on HF does present a bad image for the rest of us. But again, you
can't conclude that "nobody seems to care."

One thing is for sure, even the riff-raff can learn enough code to get
an HF license.

Tsk. You mean like "Sorry, Hans, MARS >>IS<< amateur radio!"

>I got it backwards...my bad.

You don't have it backwards, forwards, or sideways. You just
don't have it.

>(That's called an acknolwedgement of error, Lennie...You should
>try it someday...You've made so many from which to choose)

You've never acknowledged that the Department of Defense
directs MARS.

You've never acknowledged the when and where of those
"seven hostile actions."

You've never acknowledged that the University of Illinois is
NOT a correspondence school.

You've never acknowledged anything close to working military
communications in a long service with the U.S. military. You've
never acknowledged any working knowledge of common small-
unit military radios in use during that U.S. military service.

You've never acknowledged any working knowledge of Yiddish
yet you freely use at least one Yiddish pejorative in many public
postings.

You've never acknowledged the real reason for your very short
"career in electronics engineering" as a purchasing agent for a
set-top-box maker that lasted less than half a year.

You've never acknowledged that the U.S. military did NOT make
you any sort of pilot of any military aircraft despite implying that
you were licensed as a private pilot before entering the military.

You've never acknowledged many, many mistakes you've made
in here, constantly over several years.

You've never acknowledged any knowledge of radio-electronics
circuitry behind the front panels of amateur radios, yet you claim
to be knowledgeable about "radio."

>Oh, I KNOW what temperatures methane liquifies at.

Then write it. Demonstrate that methane can exist in liquid form
anywhere on the Earth's surface.

>And I know what a cold piece of work you are.

98.6 F average.

>And my reversal of the probes names notwithstanding, you're STILL
>a putz, Lennie...

Tsk, tsk, tsk. Calling others the equivalent of "penis head" is not
considered "civil" and that is certainly not "reasonable discourse."

Tell us again how your warm, witty, and civil manner attracts all
those non-radio people into amateur radio and the hundreds (?)
or dozens (?) or a few (?) you have "mentored" into ham radio.

Tell us again of your vast experience in the aerospace industry
from which you can use as a reference to "correct" everyone else
and lends credence to your credentials as a space biz guru.

Tell us again of how you can simply pick up a telephone and
call authorities (by virtue of your importance as a "medical
professional") to come and have "anyone" picked up and
committed (to a mental institution).

Tsk.

>What is most interesting is the fact that someone like
>Len, who has told us how the regulations should be
>changed for so many years, should be so ignorant of such
>a basic rule from Part 97.

Tsk. The Nun of the Above, who designs and builds his own
"state of the art" vacuum tube based radios in the 1990s, is
seemingly unaware of solid-state technology having overtaken
vacuum-state some three decades prior.

The Nun of the Above has constantly made his old-time radio
heroes to be pioneers of "firsts" despite absolutely NO radio
broadcasting transmitter copying the AM adaptation of Reggie
Fessenden done in public demonstration on 1906 (special
carbon microphone in series with antenna lead of spark trans-
mitter). Yet the Nun wishes to rap all knuckles with his/her/it
ruler when such pioneering radio heroism isn't met with
enthusiastic acclaim.

The Nun of the Above constantly refers to old regulations,
including those made by government radio regulating agencies
which no longer existed after 1934. The Nun also applies
his/her/it's ruler to knuckles which do not recognize his/her/it's
truism that morse code testing is a "necessity" for all new
amateur licensees' privileges of operating below 30 MHz on
amateur radio bands. All simply MUST do so...as it has always
been done...no good reasons given.

That striking ruler is again applied whenever an NCTA dares to
question his/her/it's claims of the efficacy of morse code mode
over and above all other modes (which it isn't, but that is besides
the point to any PCTA).

The Nun of the Above is an ultra-strict literalist who is unable to
find a life beyond the newsgroup nor employment in radio-related

industry and disavowing any relationship to professionalism in the radio-electronics industry.

Must be some sort of Catholic thing. What's troubling all these heavenly fodders is lots and lots of individuals nailing theses on the doors of the Church of St. Hiram saying that morse code testing must GO and make the "church" open to all citizens who have an interest...an interest and not a desire to dumb themselves down with old, archaic requirements that have no usefulness.

Ave, Imperator!

Tsk. Ruler-spanking time, Nun of the Above. That's "far," not
'fur.'

How is all of that justification for anything in AMATEUR RADIO
POLICY matters?

Broadcasting is NOT allowed in amateur radio (except for special
dispensation to the Church of St. Hiram and W1AW).

>> I asked a colleague who is a psychologist about Dr Laura,

Child-raising is a major topic in amateur radio policy matters?

It must be. Two self-righteous PCTA extras are talking about it
as if they were pediatricians of long experience in working with
all kinds of children. Either that or they are self-righteously
talking down to others as if those others are all "children."

>>The strange thing is that she has not learned the lesson that

Isn't "WMMR" a BROADCASTING STATION license callsign?

Why is that talked about in an AMATEUR RADIO POLICY
newsgroup?

>Point is, over time the experimental/progressive elements disappeared
>and were replaced by a formula. Homogenized just like Top 40 radio was.

Has this newsgroup changed to popular music discussion?

Does Paul Schleck know about this?

Is W1AW now broadcasting (error, that should be "bulletinizing")
popular music for the benefit of radio amateurs?

Yes, a Scandinavian who worked in balsa wood. :-)

What has that to do with the on-going waste of space in the
newsgroup?

Did you wish to get Dr. Laura on a slow raft across the Pacific? Tsk. I thought the Nun of the Above took vows of celibacy as well as economy ("recycling" electronic parts for $100 etc). Naughty, naughty.

Kon-Tiki, no washee...

The "D" stands for "doctor." One can be a doctor of mathematics, doctor
of chemistry, doctor of medicine, doctor of psychology, et cetera. All
can use the title "doctor." Heck, even a lawyers can use that title due
their degree being a Juris Doctor ("Doctor of Law").

I'm sure you called some of your professors "Doctor" and never gave
it a second thought.

If he gets a lawyer it will cost him $300 an hour, plus court costs. Well, maybe $200 an hour. It will be cheaper to buy a new radar detector.

I can't see that happening though. I guess only time will tell if it happens or not.

My guess is that their mainframe stuff uses buried fiber optic
circuits. In 1988 I got the nickel tour of the then-new Union
Pacific Railroad Control Center in Omaha. The Comm chief actually
showed me where two circuits emerged on two sides of the building,
one running via St. Louis and the other running via Kansas City. In
vital data circuits, redundancy is the name of the game.

I'd bet he didn't call them Doctor followed by their first name!

And the other thing is, at least with all the PhD's I work with, asking any one of them to comment outside their field gets the answer prefaced with a "well, it isn't my field of expertise" or something to that effect.

Dr Laura is shelling out "advice" that is not related to her field of expertise.

No, if your state does not require a front plate, then other states that
do, honor your states one tag law. It ain't rocket surgery.

Surely isn't. Or if you're *that* worried about it, get a front plate for your car in your one-plate state. I did that in Michigan (cost all of $5) on the theory that it would avoid problems when travelling to Ontario, but subsequent experience taught me I didn't have any problem driving Michigan cars with one OR two plates in Ontario.

BINGO!

Heck, you can ask most Ph.D EEs about house wiring, and most of them will
preface their remarks that way, because it *isn't* their field of EE.

Now one has to have an advanced degree in "Commonsensology" to be able to advocate such progressive ideas as faithfullness to marriage vows, a responsiblity to raise your children as a parent and not as their buddy, and forgiveness of those who've offended you. So sad.

As a matter of fact, if the downed trees cause power failures, and the
telephone lines are on the same poles and are downed, why does one have

phone service but no power?

My brother-in-law has a PhD in Physiology (his field of expertise is geriatic physiology). His "daytime" job is as a profusionist - the expert who operates the heart-lung bypass machine during open-heart surgery. For many years he was a professor and then department head in his field at a famous teaching hospital.

In class, he was "Professor". In academic meetings he was "Doctor". In the operating room he was "Mister" (he wasn't an MD - he knew too much for that!) although he was usually referred to by his first name. And yes, all the docs, including the anesthesiologists, asked him for advice on how much and what kind of anesthesia to administer.

>> Heck, even a lawyers can use that title due
>> their degree being a Juris Doctor ("Doctor of Law").

Yup, I got one of those. AFAIK there are no US law schools which grant a Batchelor of Laws degree any more.

>But they don't usually do that.

Rumor has it that the only place in the US that does is a certain part of Michigan but I don't have any first-hand info to prove that.

In the Eastern hemisphere lawyers are referred to as "Doctor" but only if they have the graduate degree (in most countries there law is an undergraduate degree program).

As an aside, the British do not call American PhD holders "Doctor" because the attitude there is that the US schools hand the degree out like candy. In a recent BBC broadcast about Condoleeza Rice, she was referred to as "Miss Rice" continuously.

Similarly, a dentist there is called "Mister" even though the coursework and training is as rigorous as that of a medical doctor.

Some can, some can't!!

Several of my classmates from engineering school went on to get a
Doctorate in Electrcal Engineering (DEE) degree. It just involves a
hell of a lot of theoretical coursework and a research dissertation.

That path never interested me - I'm too much of a practical, rather
than a research, engineer.

TONIGHT ON COAST TO COAST AM WITH ART BELL. . .

-HAARP- www.coasttocoastam.com

Guy Cramer
Dr. Joseph Resnick

Inventors Guy Cramer (superforce.com / hyperstealth.com)
and Dr. Joseph Resnick (NAT2DTC / NxGen BodyArmor)
will be sharing their expertise in the area of the HAARP.

The official purpose of Project HAARP which is based in
Alaska, is said to be for studying the ionosphere in order
to "understand and use it to enhance communications
and surveillance systems for both civilian and defense
purposes." Yet, over the years allegations have
arisen that HAARP is involved in everything from
weather modification to mind control.
Guy Cramer has a new article posted which concludes
that in addition to HAARP, there is another
huge ionospheric array in Alaska. The page also contains
photos, maps, and recommended links from Cramer
and Dr. Joseph Resnick.

If Todd is using his computer clock for appearing on the bands, it might
be tough to catch his "broadcast".

I have? I don't recall ever considering that radio amateurs would
attempt to pass financial data for bands in time of emergency.

It looks as if you're still confused.

I suppose you'll have to take that up with your power company and
telephone company, Brian. I'd have to care more about your personal
situation to spend any time researching it for you.

Again, *I* never wrote that. There are quite a few hams that care
about the on-air activities of the riff-raff that pervade the 75m and
20m bands. They may, however, disagree on how to address the problem,
or may just like to bitch about it while listening with a morbid
curiosity each evening.

>One thing is for sure, even the riff-raff can learn enough code to get

Sure I do.

I have an Amateur Radio Extra Class license...You don't. You
profess to know about Amateur Radio, yet have no practical experience
in it.

I have an FAA Airman's Certificate and have currency in 3 types.
You have NO certificate of any type and no time in anything with wings
except as a paying passenger.

I have multiple licenses as a healthcare provider. You have none,
although you somehow insinuate "experience" by virtue of sleeping with
a person with a diploma from K-Tel, Ronco, or some other such place.
(And regardless of where it's from, sleeping with it's owner does NOT
make it YOUR diploma!)

> >(That's called an acknolwedgement of error, Lennie...You should

Sure I have. Several times over. You keep ignoring it.

> You've never acknowledged the when and where of those
> "seven hostile actions."

They were and are none of your business. They exceed YOUR "hostile actions" by seven. Crawling drunk through a benjo ditch doesn't count for you, Lennie.....

> You've never acknowledged that the University of Illinois is
> NOT a correspondence school.

The University of Illinois does have extension courses.

> You've never acknowledged anything close to working military
> communications in a long service with the U.S. military. You've
> never acknowledged any working knowledge of common small-
> unit military radios in use during that U.S. military service.

Sure I have. Again, YOU ignore it. And YOU did not have but 3 years of "service with the U. S. Military). I beat that many times over.

> You've never acknowledged any working knowledge of Yiddish
> yet you freely use at least one Yiddish pejorative in many public
> postings.

Nor do I have a "working knowledge" of Japanese, Serbo-Coratian, or Tagalog, yet I can speak enough words of each to ask for help, find a cop and get drunk. I can speak conversationalist German and Spanish.

You speak...What...???

Please tell us just how competent YOU are in Yiddish. (use of a search engine notwithstanding).

> You've never acknowledged the real reason for your very short
> "career in electronics engineering" as a purchasing agent for a
> set-top-box maker that lasted less than half a year.

I never said I was an engineer. And you still don't have the facts of my employment there correct.

I stated several times over my reason for leaving nursing for a while in 2000. Everyone else that's been in here any length of time knows...except you...why is that? And I was there much longer that the "less than half a year" you keep falsely reitrating.

Also, I did not work for a "set top box maker". The company I DID work for occupied the opposite end of a building from that company (ANTEC). We rented space on their servers. You've also been told that over and over yet keep trying to make an issue out of it.

Why do you keep lying over and over, Lennie? E V E R Y O N E here sees it. Why do you keep humiliating yourself?

> You've never acknowledged that the U.S. military did NOT make
> you any sort of pilot of any military aircraft despite implying
that
> you were licensed as a private pilot before entering the military.

I never said I was a military aviator. You are welcomed to try and find ANY quote ANYwhere that says otherwise. And I WAS licensed before I went on active duty. My initial Airman's certificate was signed in August 1974. I went on active duty in September 1974.

Again, facts you've been provided with over and over, but seem to want to lie about over and over.

> You've never acknowledged many, many mistakes you've made
> in here, constantly over several years.

Unlike you, Lennie, I don't keep making the same mistakes over and over.

> You've never acknowledged any knowledge of radio-electronics
> circuitry behind the front panels of amateur radios, yet you claim
> to be knowledgeable about "radio."

I AM knowledgeable about "radio". Do I have a doctorate level degree in engineering...??? Of course not. But then I don't need it, either. I've built radios from scratch and from kits...I was paid by Uncle Sam for 2 decades to maintain aircraft (and some ground) radios. I am the owner/operator of a federally licensed radio station.

We've seen the results of YOUR "civil discourse", Lennie.

I may be crude and unrelenting in my exchanges with you, but I am not a liar, and at the end of the day, it's all about character.

> Tell us again how your warm, witty, and civil manner attracts all
> those non-radio people into amateur radio and the hundreds (?)
> or dozens (?) or a few (?) you have "mentored" into ham radio.

I've already done that.

I still DO it.

YOU have been asked over and over and over, by more than a few persons, to tell this forum how many people YOU ahve mentored in ANY radio hobby...CB, Amateur, SWLing, etc.

So far, the answer is zero.

> Tell us again of your vast experience in the aerospace industry
> from which you can use as a reference to "correct" everyone else
> and lends credence to your credentials as a space biz guru.

So far the references YOU have provided have only borne out that you were less than all you could be.

> Tell us again of how you can simply pick up a telephone and
> call authorities (by virtue of your importance as a "medical
> professional") to come and have "anyone" picked up and
> committed (to a mental institution).

Out of context, but I suggest you do some reading, Lennie.

> LenAnderson@ieee.org

A pathological liar of monumental proportions. A putz for all times.
